

# Table of contents

Abbreviations and acronyms .....	vii
About the authors and editors .....	ix
Foreword .....	xi
Acknowledgements .....	xiii
<b>Introduction</b> .....	<b>1</b>
<i>Benjamin King and Glenn McDonald</i>	
<b>I. Techno-polymers in firearms manufacturing: Challenges and implications for marking, record-keeping, and tracing</b> .....	<b>5</b>
<i>Giacomo Persi Paoli</i>	
Introduction .....	5
Techno-polymers: history, definitions, and characteristics .....	6
A comparative analysis of polymers and metals in arms manufacturing .....	9
<i>Economic and industrial perspectives</i> .....	9
<i>Operational or user perspective</i> .....	11
Implications for marking .....	12
The commercialization of polymer lower receivers .....	15
Conclusion .....	19
Endnotes .....	20
Bibliography .....	21
<b>II. From firearms to weapon systems: Challenges and implications of modular design for marking, record-keeping, and tracing</b> .....	<b>23</b>
<i>Giacomo Persi Paoli</i>	
Introduction .....	23

Understanding the concept of modularity .....	24
<i>Distinguishing parts from accessories</i> .....	24
<i>Defining modularity</i> .....	24
The origins and development of modular design .....	25
<i>The Special Forces Combat Assault Rifle (SCAR) programme</i> .....	25
<i>What makes a modular weapon different: SCAR requirements</i> .....	27
<i>Beyond the SCAR: differing approaches to modularity</i> .....	29
Modular versus standard design: a cost perspective .....	34
The implications of modularity for marking, record-keeping, and tracing .....	36
<i>Challenges for marking</i> .....	37
<i>Challenges to record-keeping</i> .....	38
<i>Challenges to effective tracing</i> .....	39
Conclusion .....	40
Endnotes .....	41
Bibliography .....	41

### III. Small arms and additive manufacturing:

<b>An assessment of 3D-printed firearms, components, and accessories</b> .....	43
<i>N.R. Jenzen-Jones</i>	
Introduction .....	43
Additive manufacturing today .....	44
<i>The additive manufacturing industry</i> .....	44
<i>Additive manufacturing and the firearms industry</i> .....	45
<i>Amateur 3D-printed firearms</i> .....	46
Current additive manufacturing technologies .....	47
<i>Stereolithography (SLA)</i> .....	47
<i>Fused deposition modelling (FDM)</i> .....	48
<i>Direct metal laser sintering (DMLS), selective laser melting (SLM), and selective laser sintering (SLS)</i> .....	48
<i>Other technologies</i> .....	50
Assessment of current 3D-printed firearms .....	50
<i>Defense Distributed Liberator</i> .....	50

<i>Solid Concepts Inc. 1911</i> .....	52
<i>3D-printed firearms components and accessories</i> .....	53
<b>The future of additive manufacturing technology in the firearms industry</b> .....	55
<b>Policy considerations</b> .....	58
<i>Regulation of firearms manufacturing</i> .....	58
<i>Marking, record-keeping, and tracing</i> .....	60
<i>Regulation of international transfers</i> .....	61
<i>Law-enforcement challenges</i> .....	62
<i>Other policy implications</i> .....	65
<b>Conclusion</b> .....	65
<b>Endnotes</b> .....	67
<b>Bibliography</b> .....	69

#### **IV. New technologies and small arms control:**

<b>Preventing unauthorized acquisition and use</b> .....	75
<i>Matt Schroeder</i>	
<b>Introduction</b> .....	75
<b>Marking, record-keeping, and tracing</b> .....	76
<b>Physical security and stockpile management</b> .....	80
<b>End-use control</b> .....	82
<b>Barriers to adopting new and under-used technologies</b> .....	84
<b>Conclusion</b> .....	88
<b>Endnotes</b> .....	89
<b>Bibliography</b> .....	91

<b>Publications list</b> .....	94
