|---------------------------------------------------------------------------|-----------|
| Introduction | 1 |
| 1 Methodology of High-Energy Physics at Particle Colliders | 5 |
| 1.1 Scattering experiments | 5 |
| 1.1.1 Cross section | 6 |
| 1.1.2 Inelastic scattering and center-of-mass energy | 7 |
| 1.2 Particle accelerators | 7 |
| 1.2.1 Accelerator layouts | 8 |
| 1.2.2 Luminosity | 9 |
| 1.3 Basic detector concepts for high-energy physics experiments | 10 |
| 1.3.1 Tracking detectors | 10 |
| 1.3.2 Calorimetry | 12 |
| 1.4 Searches and measurements | 12 |
| 2 Theoretical Framework | 15 |
| 2.1 The standard model of particle physics | 15 |
| 2.1.1 Particles | 16 |
| 2.1.2 Interactions | 18 |
| 2.1.3 Electroweak symmetry breaking and the Higgs boson | 20 |
| 2.1.4 Perturbation theory and Feynman diagrams | 22 |
| 2.2 Limitations of the standard model and open questions | 24 |
| 2.2.1 Neutrino oscillations | 24 |
| 2.2.2 Dark matter | 25 |
| 2.2.3 Higher energy scales | 25 |
| 2.2.4 Hierarchy problem | 26 |
| 2.2.5 Further open questions | 27 |
| 2.3 Supersymmetry | 27 |
| 2.3.1 Minimal supersymmetric standard model | 28 |
| 2.3.2 Supersymmetry breaking | 30 |
| 2.3.3 Production and decay of supersymmetric particles | 31 |
| 2.3.4 Simplified model spectra | 32 |
| 3 The Large Hadron Collider and the CMS Experiment | 33 |
| 3.1 The Large Hadron Collider | 33 |
| 3.1.1 Accelerator design and performance | 34 |
| 3.1.2 LHC operation periods | 35 |
| 3.2 Proton-proton collisions | 36 |
| 3.2.1 Hadron interaction modeling | 36 |
| 3.2.2 Transverse observables | 38 |
| 3.2.3 QCD multijet background | 38 |

| | | |
|----------|----------------------------------------------------------------------------------------------------------------|-----------|
| 3.3 | The Compact Muon Solenoid Experiment | 39 |
| 3.3.1 | Magnet | 40 |
| 3.3.2 | Inner tracking system | 40 |
| 3.3.3 | Calorimetry | 41 |
| 3.3.4 | Muon system | 43 |
| 3.3.5 | Trigger and computing | 44 |
| 3.4 | Event simulation with the Monte Carlo method | 45 |
| 1 | Search for Supersymmetry in Events with Multiple Charged Leptons, Jets, and Missing Transverse Momentum | 47 |
| 4 | Motivation | 49 |
| 4.1 | Supersymmetric signals models | 50 |
| 4.2 | The multilepton final state | 51 |
| 4.3 | Standard model background | 52 |
| 4.4 | Data set and prior analyses | 52 |
| 5 | Trigger and Object Reconstruction | 53 |
| 5.1 | Particle flow | 53 |
| 5.2 | Triggers | 54 |
| 5.2.1 | Trigger paths | 54 |
| 5.2.2 | Trigger efficiency | 55 |
| 5.3 | Lepton identification | 57 |
| 5.3.1 | Muons | 57 |
| 5.3.2 | Electrons | 58 |
| 5.3.3 | Lepton isolation | 59 |
| 5.3.4 | Lepton efficiency and efficiency scale factors | 61 |
| 5.4 | Jets and missing transverse momentum | 62 |
| 5.4.1 | Jets | 63 |
| 5.4.2 | Jets originating from b quarks | 63 |
| 5.4.3 | Hadronic activity | 64 |
| 5.4.4 | Missing transverse momentum | 64 |
| 6 | Event Selection and Search Strategy | 65 |
| 6.1 | Baseline selection | 65 |
| 6.2 | Signal regions | 69 |
| 7 | Background Estimation | 75 |
| 7.1 | Nonprompt lepton background | 75 |
| 7.1.1 | Tight-to-loose method | 76 |
| 7.1.2 | Validation with simulation | 80 |
| 7.1.3 | Validation with data | 83 |
| 7.2 | WZ background | 85 |
| 7.3 | Other background processes | 87 |
| 7.3.1 | Leading order/next-to-leading order comparison for $t\bar{t}V$ simulations | 88 |
| 8 | Systematic uncertainties | 91 |
| 8.1 | Experimental uncertainties | 91 |
| 8.1.1 | Jet energy corrections | 91 |
| 8.1.2 | Tagging efficiency for b jets | 93 |
| 8.1.3 | Pileup and luminosity | 93 |
| 8.1.4 | Lepton selection and trigger efficiency | 93 |

| | | |
|-----------|----------------------------------------------------------------------------------------------------------|------------|
| 8.2 | Uncertainties related to data-driven background estimations | 95 |
| 8.2.1 | Nonprompt lepton background | 95 |
| 8.2.2 | WZ background | 95 |
| 8.3 | Theoretical uncertainties | 96 |
| 8.3.1 | Uncertainties related to the estimation of $t\bar{t}V$ background | 96 |
| 8.3.2 | Other rare background processes | 96 |
| 8.4 | Uncertainties arising from limited Monte Carlo statistics | 97 |
| 8.5 | Additional uncertainties on simulated signal processes | 97 |
| 9 | Results | 99 |
| 9.1 | On-Z baseline selection | 99 |
| 9.2 | Off-Z baseline selection | 101 |
| 9.3 | Signal regions | 102 |
| 10 | Interpretation | 107 |
| 10.1 | Statistical analysis | 108 |
| 10.1.1 | Observed exclusion limit | 108 |
| 10.1.2 | Upper limit on production cross section | 110 |
| 10.1.3 | Expected exclusion limit | 110 |
| 10.1.4 | Observed significance | 110 |
| 10.2 | Simplified model interpretation | 111 |
| 10.2.1 | Exclusion limits for the $T1tttt$ model | 112 |
| 10.2.2 | Exclusion limits for the $T5qqqqWZ$ model | 113 |
| 10.2.3 | Post-fit nuisance parameters | 114 |
| 10.3 | Interpretation with most sensitive signal regions | 115 |
| 10.4 | Comparison with other results | 116 |
| 11 | Intermediate Summary | 119 |
| II | Radiation Tolerance of the Digital Readout Chip for the Phase I Upgrade of the CMS Pixel Detector | 121 |
| 12 | Status and Prospects of High-Energy Physics at the LHC | 123 |
| 13 | The CMS Pixel Detector and the Phase I Upgrade | 127 |
| 13.1 | Semiconductor tracking detectors | 127 |
| 13.1.1 | Interaction of charged particles with matter | 128 |
| 13.1.2 | Silicon as sensor material | 129 |
| 13.1.3 | Capacity and leakage current | 131 |
| 13.1.4 | Signal formation and collection | 131 |
| 13.1.5 | Radiation damage in silicon sensors | 132 |
| 13.1.6 | Hybrid pixel detector layout | 134 |
| 13.2 | The Phase I Upgrade of the pixel detector | 135 |
| 13.2.1 | Specifications and performance of the upgraded detector | 136 |
| 13.2.2 | Pixel detector modules | 138 |
| 13.2.3 | Detector geometry and cooling | 141 |
| 13.2.4 | Powering and data readout | 141 |
| 14 | The Digital Readout Chip | 143 |
| 14.1 | The pixel unit cell | 144 |
| 14.1.1 | Analog domain of the pixel unit cell | 144 |
| 14.1.2 | Digital domain of the pixel unit cell | 146 |

| | | |
|-----------|-------------------------------------------------------------------------|------------|
| 14.2 | Double column and double column interface | 147 |
| 14.2.1 | Double column drain mechanism | 147 |
| 14.2.2 | Data and time stamp buffers | 147 |
| 14.3 | ROC controller and interface block | 148 |
| 14.3.1 | Pulse height sampling ADC | 148 |
| 14.3.2 | Phase-locked loop and data serializer | 149 |
| 14.3.3 | Readout buffer | 149 |
| 14.3.4 | Readback mechanism | 149 |
| 14.3.5 | Other services and supply circuits | 150 |
| 14.4 | Readout format | 150 |
| 14.5 | Digital ROC versions | 150 |
| 14.5.1 | Layer 2–4 ROC | 151 |
| 14.5.2 | Layer 1 ROC | 151 |
| 14.6 | Chip commissioning and calibrations | 152 |
| 14.6.1 | Pretest | 152 |
| 14.6.2 | Pixel threshold adjustment | 153 |
| 14.6.3 | Pulse height optimization and calibration | 154 |
| 14.6.4 | Charge calibration | 155 |
| 15 | Readout Chip Irradiation and Testing | 157 |
| 15.1 | Radiation damage in MOSFETs and integrated circuits | 158 |
| 15.2 | Radiation environment of the upgraded pixel detector | 160 |
| 15.3 | Proton irradiation of readout chip samples | 161 |
| 15.3.1 | Target doses and samples | 161 |
| 15.3.2 | Irradiation facility and setup | 162 |
| 15.3.3 | Dosimetry and tested samples | 163 |
| 15.4 | Test setups | 164 |
| 15.4.1 | Data acquisition | 164 |
| 15.4.2 | Climate chamber setup | 166 |
| 15.4.3 | X-ray test stand | 166 |
| 16 | Results | 169 |
| 16.1 | Chip commissioning and working points | 170 |
| 16.1.1 | Band gap reference voltage | 170 |
| 16.1.2 | Supply currents | 171 |
| 16.1.3 | Basic test pulse readout | 174 |
| 16.2 | Analog performance | 176 |
| 16.2.1 | Charge calibration and depletion voltage | 176 |
| 16.2.2 | Noise | 178 |
| 16.2.3 | Pixel threshold | 179 |
| 16.2.4 | Timewalk | 182 |
| 16.3 | High-rate performance | 183 |
| 16.3.1 | Test pulse response efficiency in high occupancy environment | 183 |
| 16.3.2 | Hit rate dependence of the current consumption | 185 |
| 16.3.3 | Minimum digital supply voltage | 186 |
| 16.4 | Pulse height sampling ADC | 188 |
| 16.4.1 | Radiation induced degradation of the pulse height information | 188 |
| 16.4.2 | Explanation and mitigation | 189 |
| 16.5 | Supplementary tests | 193 |
| 16.5.1 | Propagation velocity of the double column token | 193 |
| 16.5.2 | Readback calibration | 195 |
| 16.6 | Summary and implications of observed radiation effects | 197 |

| | |
|--------------------------------------------------------------|------------|
| Summary and Outlook | 201 |
| Appendix – Part I | 205 |
| A High-level trigger paths | 205 |
| B Lepton isolation efficiency curves | 206 |
| C List of standard model background simulations | 208 |
| D On-Z events with high p_T^{miss} | 209 |
| E Off-Z events with high jet multiplicities | 213 |
| F Result table split by background sources | 218 |
| Appendix – Part II | 219 |
| G Readout chip and single chip module samples | 219 |
| H Climate chamber setup | 221 |
| I X-ray test stand | 222 |
| J ROC and DTB operation parameters | 223 |
| Acronyms | 227 |
| List of Figures | 229 |
| List of Tables | 233 |
| Bibliography | 235 |
