

TABLE OF CONTENTS

SUMMARY	13
RESUMEN	15
GENERAL INTRODUCTION	18
CHAPTER 1	37
Diffusion of the maize root signal (<i>E</i>)- β -caryophyllene in soils of different textures and the effects on the migration of the entomopathogenic nematode <i>Heterorhabditis megidis</i>	
CHAPTER 2	71
Combined field inoculations of <i>Pseudomonas</i> bacteria, arbuscular mycorrhizal fungi and entomopathogenic nematodes and their effects on wheat performance	
APENDIX	121
Biocontrol of larvae of the banded cucumber beetle <i>Diabrotica balteata</i> (Coleoptera: Chrysomelidae) with combinations of entomopathogenic nematodes and pseudomonads root-colonizing bacteria	
CHAPTER 3	131
Root-colonizing bacteria enhance the levels of (<i>E</i>)- β -caryophyllene produced by maize roots in response to rootworm feeding	
FINAL DISCUSSION, CONCLUSIONS AND OUTLOOKS	130
ACKNOWLEDGEMENTS	140
LIST OF PUBLICATIONS	142
PRESENTATIONS	143
