Abstract	v
Résumé	vii
Abbreviations.....	ix
Contents	xi
Chapter 1. Introduction.....	1
1.1. Objective of the thesis.....	1
1.2. Nicotinamide adenine dinucleotides (NAD, NADP)	2
1.2.1. Structure and biosynthesis	2
1.2.2. Physiological functions	4
1.2.3. NAD(P) in pathologies and ageing	7
1.2.4. Quantification methods.....	8
1.3. Protein-based fluorescent biosensors	15
1.3.1. Genetically-encoded sensors.....	15
1.3.2. Snifits	15
Chapter 2. Development of biosensors for NAD(P).....	19
2.1. Sepiapterin reductase	19
2.1.1. Structure and function	19
2.1.2. Characterization of SPR inhibitors and insight into their binding mode.....	22
2.2. Initial sensor design.....	24
2.2.1. Preliminary characterization and establishment of the sensor model.....	24
2.2.2. Cofactor dependency of SPR inhibitors	33
2.2.3. Solving the pH sensitivity.....	36
2.2.4. Characterization of the sensor kinetics	39
2.2.5. Cell permeability of BG/CP substrates and SPR inhibitors.....	42
2.3. Improvement of the sensor dynamic range	49
2.4. Switching the cofactor specificity.....	53
2.5. Snifits modularity	56

Chapter 3. NADP- and NAD-Snifits	59
3.1. In vitro characterization	59
3.1.1. Sensors affinities and temperature dependence	61
3.1.2. Specificity	64
3.1.3. pH sensitivity	66
3.1.4. Kinetic analysis of NAD(P)-Snifits.....	68
3.1.5. Determination of the FRET efficiency.....	69
3.1.6. Sensor oligomeric state	72
3.1.7. Quantification of NAD(P) in cell lysate	74
3.2. In cellulo characterization	76
3.2.1. Subcellular targeting	76
3.2.2. Intracellular labeling efficiency.....	80
3.2.3. Intracellular sensor concentration	82
3.2.4. SPR levels in cells.....	84
Chapter 4. Live cell applications of NAD(P)-Snifits	85
4.1. Subcellular quantification of NADPH/NADP ⁺ and NAD ⁺ in live cells	85
4.1.1. Quantification by emission ratio	85
4.1.2. Quantification by fluorescence lifetime imaging microscopy (FLIM)	88
4.2. Real-time monitoring of oxidative stress	91
4.3. Pharmacological alteration of cellular metabolism	94
Chapter 5. Conclusions.....	101
Chapter 6. Material and Methods.....	107
6.1. Synthesis	107
6.2. Procedures	119
6.2.1. Plasmids construction	119
6.2.2. Bacterial protein expression, purification and labeling	119
6.2.3. Titrations of the sensors.....	120
6.2.4. Cell culture, transfection and cell labeling	121
6.2.5. Live-cell quantification of NADPH/NADP ⁺ and NAD ⁺ by ratio imaging	122
6.2.6. Live-cell quantification of NADPH/NADP ⁺ and NAD ⁺ by FLIM.....	123

6.2.7. Real-time monitoring of oxidative stress.....	125
6.2.8. Flow cytometry measurements.....	125
6.2.9. Labeling kinetics	126
6.2.10. In vitro kinetics measurements	127
6.2.11. Western blots of SPR levels in different cell lines	128
6.2.12. Intracellular labeling efficiency	128
6.2.13. Colocalization analysis of the mitochondrial sensor and MitoTracker Green	129
6.2.14. Determination of the sensor intracellular concentration	130
6.2.15. Correction of the NADPH/NADP ⁺ ratios	131
6.2.16. Determination of NADPH/NADP ⁺ and NAD ⁺ in cell lysates.....	131
6.2.17. Determination of the Förster distance.....	132
References	133
Appendix.....	155
Curriculum Vitae	159
