

Table of contents

Acknowledgements	iii
List of figures and tables	vii
List of abbreviations	ix
1. Summary	1
2. General introduction	3
2.1 Eukaryotic transcription factors bind a fraction of their target sites	3
2.2 Role of chromatin in binding site restriction	4
2.2.1 Nucleosomes and transcription factor binding	6
2.2.2 Histone modifications and transcription factor binding	7
2.2.3 DNA methylation and transcription factor binding	8
2.2.3.1 Evolution of cytosine methylation and repeat silencing	9
2.2.3.2 Distribution of CpGs and methylation in vertebrate genomes	12
2.2.3.3 DNA methylation and transcription factor binding <i>in vitro</i>	15
2.2.3.4 DNA methylation and transcription factor binding <i>in vivo</i>	18
2.2.3.5 Example CTCF	19
2.3 Studying binding site restriction of transcription factors <i>in vivo</i>	20
2.4 Open questions and scope of this thesis	22
3. Results	25
3.1 Methylation sensitivity of the transcription factor CTCF	25
3.1.1 Abstract	25
3.1.2 Introduction	26
3.1.3 Results	27
3.1.3.1 A subset of CTCF binding events occur only in the absence of DNA methylation	28
3.1.3.2 TKO-specific sites contain more CpGs in the motif and the flanking regions	30
3.1.3.3 Methylation sensitivity of CTCF can be recapitulated at an ectopic site	31
3.1.3.4 CTCF binding is independent of H3K9me3 in the ectopic site	34
3.1.3.5 Methylation levels of inserted sequences vary between clones	34
3.1.4 Discussion	39
3.2 Binding site restriction by DNA methylation in embryonic stem cells	42

3.2.1	Abstract	42
3.2.2	Published manuscript	42
3.2.3	Addendum	62
3.3	Binding site restriction by DNA methylation in differentiated cells	63
3.3.1	Abstract	63
3.3.2	Introduction	64
3.3.3	Results	66
3.3.3.1	Differentiated cells lacking DNA methylation	66
3.3.3.2	Limited changes in gene expression in TKO neurons	68
3.3.3.3	A subset of sites are only accessible in TKO neurons	70
3.3.3.4	HNF6 is a candidate methylation-sensitive transcription factor	75
3.3.3.5	Specific retrotransposons are strongly activated in TKO neurons	77
3.3.3.6	Comparison of repeat activation with other chromatin mutants	79
3.3.3.7	The CRE motif is highly predictive of transposon activation	83
3.3.4	Discussion	89
4.	General discussion	95
4.1	Extent of binding site restriction by DNA methylation	95
4.2	Comparison of identified methylation-sensitive transcription factors	97
4.2.1	Comparison of expression and target genes	97
4.2.2	Comparison of DNA-binding domains	98
4.2.3	Comparison of methylation-sensitive motifs	101
4.3	Direct or indirect blocking of binding by DNA methylation	103
4.4	Transcription factor hierarchies mediated by DNA methylation	105
4.5	DNA methylation and cell survival	106
4.6	Transferability of the approach to studying other chromatin features	107
5.	Materials and methods	111
6.	References	119
7.	Curriculum vitae	135
