Summary	1
Part 1	
Introduction	5
Chapter 1 Reciprocal microbiota transplantation reveals specificity but no evidence for coevolved mutualism in sympatric zooplankton	15
Chapter 2 Origin of microbiota does not influence transmission but composition of the microbial community in the water flea <i>Daphnia magna</i>	35
Chapter 3 Microbial community of <i>Daphnia magna</i> is an open system	59
Chapter 4 Consequences of host inbreeding on microbiota diversity in the planktonic crustacean <i>Daphnia</i>	81
Conclusion	99
Part 2	
Chapter 5 The microbiota of diapause: How host–microbe associations are formed after dormancy in an aquatic crustacean	107
Chapter 6 The combined effect of temperature and host clonal line on microbiota composition	135
