1	Definitions	5
2	Summary	7
3	Zusammenfassung.....	11
4	General introduction.....	15
4.1	High elevation life zone	15
4.1.1	Life conditions	15
4.1.2	Climate	16
4.1.3	Vegetation and elevational zonation	17
4.2	Alpine grassland	20
4.2.1	Sward communities in the drought experiment	20
4.2.2	Ecosystem services of alpine grassland.....	21
4.3	Study sites	21
4.3.1	Albula and Furka Pass.....	21
4.3.2	Experimental sites and observational areas	23
4.4	Climate change	26
4.4.1	Global and regional climate change	26
4.4.2	Climate change impacts on plant communities	26
4.4.3	Drought impacts on grassland ecosystems	27
4.4.4	Effects of climate change on alpine ecosystems.....	28
4.4.5	Consequences of a warmer climate in alpine ecosystems.....	28
4.4.6	Consequences of a drier climate in alpine ecosystems.....	30
4.5	Plant stress	31
4.5.1	Conceptions of stress	31
4.5.2	Drought stress	32
4.5.3	Physiological responses during drought stress	33
4.5.4	Survival of drought stress.....	33
4.6	Drought experiment.....	35
4.6.1	Experimental design	35
4.6.2	Rainout shelter design and sampling plot.....	36
4.6.3	Rainfall manipulation	37
4.6.4	Assessment of the drought simulation with micro-meteorological measurements	38

4.6.5	Classification of the simulated droughts in relation to climate change scenarios and other drought experiments	41
4.7	Thesis outline.....	48
4.8	References	49
5	Changes in vegetation structure of alpine grassland in response to three years of simulated summer drought are highly site-dependent (Study 1).....	59
5.1	Abstract.....	59
5.2	Introduction.....	60
5.3	Methods.....	63
5.3.1	Study sites.....	63
5.3.2	Experimental design and drought simulation.....	64
5.3.3	Data collection	65
5.3.4	Data analysis	66
5.4	Results.....	69
5.4.1	Canopy structure	69
5.4.2	Soil surface structure	70
5.4.3	Ground protection (overlay canopy layer, soil surface)	70
5.4.4	Vegetation dry matter	71
5.4.5	Methods comparison.....	71
5.5	Discussion	79
5.5.1	Structural variability in alpine grassland.....	79
5.5.2	Alpine grassland structural responses to summer drought	80
5.5.3	Erosion susceptibility in alpine grassland	85
5.5.4	Non-destructive assessment of structural responses to summer drought in alpine grassland vegetation.....	88
5.6	Conclusions.....	90
5.7	References	91
6	Shift from above- to below-ground biomass production in alpine grassland to resist recurring experimental summer droughts (Study 2).....	97
6.1	Abstract.....	97
6.2	Introduction	98
6.3	Methods.....	102
6.3.1	Study sites.....	102
6.3.2	Experimental design and drought simulation.....	103
6.3.3	Data collection	104

6.3.4	Data analysis.....	106
6.4	Results	110
6.4.1	Above-ground biomass responses.....	110
6.4.2	Below-ground biomass responses	111
6.4.3	Overall system biomass responses	112
6.5	Discussion.....	123
6.5.1	Comparison with other studies	123
6.5.2	Role of roots and storage organs in the drought response of alpine grassland	124
6.5.3	Biomass allocation under drought in alpine grassland	126
6.5.4	Functional equilibrium theory.....	128
6.6	Conclusions	129
6.7	References.....	129
7	Elevational species shifts in a warmer climate are overestimated when based on weather station data (Study 3)	135
7.1	Abstract.....	135
7.2	Introduction	136
7.3	Materials and methods	137
7.3.1	Study sites	137
7.3.2	Field data	137
7.3.3	Data analysis.....	139
7.4	Results	140
7.5	Discussion.....	148
7.5.1	Within-plot variation	148
7.5.2	Within-slope variation	149
7.5.3	Among-slope variation	149
7.5.4	Manipulation of spatial sampling resolution	150
7.6	Acknowledgements.....	152
7.7	References.....	152
8	General discussion	157
8.1	Impacts of summer droughts on alpine grassland ecosystems	157
8.2	Impacts of warming on species distribution in alpine grassland communities	159
8.3	Alpine grassland ecosystem stability in the face of climate change	160
8.4	References.....	163
9	Acknowledgements.....	165

10	Curriculum vitae	167
