Acknowledgements	i
Abstract (English/Deutsch)	iii
List of figures	ix
List of tables	xiii
List of symbols	xiii
1 Introduction	1
2 The GENERIC framework	9
2.1 Introduction to GENERIC	10
2.2 Statistical physics foundations	11
3 Modelling the rheology of anisotropic particles on interfaces	13
3.1 The toy model	14
3.2 Identification of the relevant variables	14
3.3 Reversible dynamics	15
3.4 Entropy	16
3.4.1 Coarse-graining methodology	17
3.4.2 Ideal orientational entropy	18
3.4.3 Excess entropy	19
3.4.4 Total entropy functional	22
3.5 Friction matrix—surface viscosity	23
3.5.1 Surface viscosity	23
3.6 Friction matrix—rotational relaxation	24
3.6.1 Analytic expression for rotational relaxation	25
3.6.2 Remarks on the separating timescale	25
3.6.3 Friction matrix for intermediate surface coverage	26
3.6.4 Friction matrix for high surface coverage	28
3.7 Assembling the building blocks	30
3.7.1 Surface stresses	30
3.7.2 Set of evolution equations	31
	vii

Contents

4 Rheology of anisotropic particles on interfaces	33
4.1 Linear rheological behaviour	35
4.2 Start-up and steady shear flow	35
4.3 Oscillatory shear flow	38
4.4 Oscillatory dilatational flow	40
4.5 Remarks	43
5 Capillary interactions and structure	45
5.1 Theory and Literature	46
5.1.1 Shape-induced capillary interaction between two particles	46
5.1.2 Self-assembly and structure formation	48
5.2 The superposition approximation	49
5.3 Our empirical pair potential	53
5.4 Self-assembly of ellipsoids at interfaces	55
5.4.1 Simulation details	56
5.4.2 Time dependence of self-assembled structures	57
5.4.3 Kinetically-arrested gel-like structures	60
5.4.4 Remarks	61
6 Highlights and outlook	63
6.1 Highlights	63
6.2 Outlook	64
Bibliography	67
A Appendix	81
A.1 The generating function for ideal planar rotators	81
A.2 Interpolation formula for the ideal orientational entropy	81
A.3 Fourth moment in terms of rank two tensors	83
A.4 Pairwise interactions and the superposition approximation	84
A.5 Ratio of SS and TT bond energies	85
A.6 Results of simulations with the quadrupole approximation	85
Curriculum Vitae	87
