Abstract	i
Résumé	iii
Acknowledgements	v
1 Introduction	1
1.1 Motivation	1
1.2 Kinematic dynamo theory	3
1.2.1 Maxwell's equations	3
1.2.2 A kinematic dynamo	4
1.2.3 Transient growth	5
1.2.4 Definition of Rm	7
1.2.5 Theoretical bounds	8
1.3 Self-consistent dynamo models	10
1.4 Dynamo experiments	11
2 Dynamos and optimizations	16
2.1 Optimizations in a cube	16
2.1.1 Optimization of ABC type	16
2.1.2 Large scale optimizations	17
2.1.3 Outlook	17
2.2 Optimizations in a sphere	18
2.2.1 The KR and DJ types	18
2.2.1.1 KR flow	19
2.2.1.2 GKR flow	20
2.2.1.3 STW flow	20
2.2.1.4 Parameter study of KR flows	21
2.2.1.5 DJ flows	22
2.2.1.6 MDJ flows	23
2.2.1.7 Optimizing DJ flows	24
2.2.2 Optimal transient growth for selected flows	24
3 Methods	26
3.1 The variational method	26
3.1.1 The Lagrangian formulation	26
3.1.1.1 A toy problem	26

3.1.1.2 The analysis of W12	28
3.1.2 Boundary terms	30
3.1.3 Euler-Lagrange equations	32
3.2 Time stepping method	33
3.2.1 Second order Adams Bashforth method	33
3.2.2 Predictor-corrector method	33
3.2.3 CFL condition	34
3.3 Galerkin method in Cartesian coordinates	34
3.3.1 Fourier decomposition	34
3.3.2 Optimization loop	35
3.3.2.1 Initialization	35
3.3.2.2 Forward model	36
3.3.2.3 Adjoint model	37
3.3.2.4 Updates	37
3.4 Galerkin method in spherical coordinates	38
3.4.1 Poloidal-toroidal decomposition	38
3.4.2 Selection rules	40
3.4.3 Symmetry properties	40
3.4.4 Forward model	41
3.5 Summary	41
4 Optimal kinematic dynamos in a cube	42
4.1 Introduction	42
4.1.1 Preliminary tests	43
4.1.2 Modification of the Lagrangian	44
4.1.3 Galerkin basis	45
4.1.4 Solving the initial scattering problem in our results	46
4.2 Problem & method	47
4.2.1 Objective function	47
4.2.2 Boundary conditions	47
4.2.3 Euler-Lagrange equations	48
4.2.4 Numerical method	50
4.2.4.1 Galerkin expansions	51
4.2.4.2 Extension to the periodic box & projectors	52
4.2.4.3 Optimization scheme	52
4.2.4.4 Testing	53
4.3 Results	54
4.3.1 Illustrating the iterative optimization in progress	54
4.3.2 Growth rates γ of optimized dynamos as a function of Rm	54
4.3.3 Minimal dynamo thresholds $Rm_{c,min}$	56
4.3.4 Spatial profiles & kinetic energy spectra	57
4.3.5 Perturbation study	60
4.4 Analysis and discussion	60
4.4.1 Helicity	60
4.4.2 Minimal magnetic Reynolds number based on rms speed	62
4.4.3 Symmetry of the cube and its consequences	63

4.4.3.1	Trivial consequence of symmetry: degeneracy of the optima	64
4.4.3.2	Symmetry & anti-correlation in the optimal flows	64
4.4.3.3	Identical growth rates for complementary boundary conditions	66
4.4.4	Backus bound	67
4.5	Conclusion	68
4.6	Appendix	68
4.6.1	Projectors in spectral space	68
4.6.2	Validation of the adjoint model	69
4.6.3	Calculation of the Lagrange multipliers	70
5	Optimal kinematic dynamos in a sphere (no-slip B.C.)	72
5.1	Introduction	72
5.1.1	Lagrangian formalism	73
5.1.2	A new Galerkin method	73
5.1.3	Benchmark result	74
5.2	Methods	75
5.2.1	Definition of the optimization objective	75
5.2.2	Euler-Lagrange formalism in primitive format	76
5.2.3	Reduced set of Euler-Lagrange equations	79
5.2.4	Galerkin expansions for \mathbf{u} , \mathbf{B} and \mathbf{B}^\dagger	80
5.2.5	The optimization algorithm	82
5.2.6	Degeneracy of the optimum	85
5.3	Results	86
5.3.1	Preliminary tests	86
5.3.2	An example of an optimization run	87
5.3.3	Systematic survey	88
5.3.4	The spatial structure of the optimal solution at $Rm_{c,min}$	92
5.3.5	Analysis in spectral space	97
5.3.6	Perturbation study	100
5.3.7	Transient growth	100
5.3.8	Comparison with theoretical bounds	101
5.3.9	Comparison with other flows	102
5.3.10	Reduced models	106
5.4	Conclusions	106
5.5	Appendix	107
5.5.1	Orthonormal Toroidal/poloidal vector field bases	107
5.5.1.1	The Poloidal-toroidal expansions	107
5.5.1.2	Orthogonal Galerkin polynomials	108
5.5.1.3	Projection of direct/adjoint induction term	109
5.5.1.4	Projection of nonlinear integrand in velocity update	111
5.5.1.5	Gaussian quadrature	111
5.5.2	Visualization of the optimal flow field	112

6	Optimal kinematic dynamos in a sphere (free-slip B.C.)	114
6.1	Modifications	114
6.2	Results	116
6.2.1	Optimal dynamo solutions	116
6.2.2	Optimal transient solution	119
6.3	Conclusions	121
7	Optimal kinematic dynamos in a sphere (with symmetries)	122
7.1	Introduction	122
7.1.1	Five different symmetry classes	122
7.1.2	General setting of the model	124
7.2	Axisymmetric flows	125
7.3	Dipole families	128
7.4	Quadrupole families	130
7.5	Axisymmetric E^S flows	133
7.6	Axisymmetric E^A flows	136
7.7	The properties of the optimal fields	138
7.8	The optimal transient solutions	141
7.9	Cube and sphere comparison	142
7.10	Conclusions	145
8	Conclusions	146
	Appendices	149
A	Dynamo theory	150
A.1	Theoretical lower bounds on dynamo action	150
A.1.1	Backus bound	150
A.1.2	Childress bound	151
A.1.3	Proctor bound	151
B	Cubes	153
B.1	Coordinate system	153
B.2	Equivalent norms	154
C	Spheres	158
C.1	Coordinate system	158
C.2	Equivalent norms	160
