Acknowledgments	v
Abstract	vii
Kurzfassung	ix
Acronyms	xv
Symbols	xvii
1 Introduction	1
1.1 Fault Definition	1
1.2 Fault-Tolerance for Unmanned Aerial Systems	2
1.3 Thesis Outline	3
2 State of the Art	5
2.1 Active versus Passive Fault-Tolerant Control Approaches	5
2.2 Overview of Fault Detection and Identification Algorithms	6
2.2.1 State Estimation Based Fault Detection and Identification	7
2.2.2 Sliding Mode Observers	10
2.2.3 Parity Space Approach	10
2.2.4 Redundant Actuator Fault Detection by System Excitation	11
2.2.5 Shortcomings of the State of the Art Fault Detection and Identification	11
2.3 Fault-Tolerant Control Reconfiguration	12
2.3.1 Projection Based Control Reconfiguration	12
2.3.2 Shortcomings of the State of the Art Fault-Tolerant Control	13
2.4 Scientific Contributions	13
3 Unmanned Aerial System Modeling	15
3.1 Introduction	15
3.1.1 Outline and Contributions	16
3.2 System Dynamics Modeling	16
3.2.1 External Forces and Moments	18
3.3 Propulsion Group Modeling	19

3.4	Aerodynamics Modeling	20
3.4.1	2D Aerodynamic Forces	20
3.4.2	Nonlinear Lifting Line Theory Model	21
3.4.3	Modeling the Fuselage Influence	23
3.4.4	Momentum Theory	23
3.4.5	Blade Element Momentum Theory	24
3.4.6	Nonlinear Parametrization	26
3.5	Linear System Model	27
3.6	Sensor Modeling	28
3.7	Experimental Platforms	30
3.7.1	SenseSoar	31
3.7.2	Techpod	34
3.8	Conclusions	34
4	Framework for Actuator and Sensor Fault-Tolerant Control	39
4.1	Introduction	39
4.2	Outline and Contributions	39
4.3	Sensor and Actuator Fault-Tolerant Control Approach	39
4.4	Conclusions	41
5	Fault Detection and Identification	43
5.1	Introduction	43
5.1.1	Outline and Contributions	43
5.2	Sensor and Actuator Fault Detection	44
5.2.1	Sensor and Actuator State-Space Comparison Approach	44
5.2.2	Fault Detection using a Gaussian Hidden Markov Model	50
5.3	Actuator Fault Detection with Redundant Actuators	52
5.4	Verification with Unmanned Aerial Systems	53
5.4.1	State Estimator	53
5.4.2	Simulation Results	55
5.4.3	Monte-Carlo Simulations	58
5.5	Conclusions	59
6	Fault-Tolerant Control	61
6.1	Introduction	61
6.1.1	Outline and Contributions	61
6.2	Active Fault-Tolerant Control with Improved Nominal Performance	62
6.2.1	Assumptions regarding the Fault Detection and Identification	62
6.2.2	Advantages of the Reliable Active Fault-Tolerant Control	63
6.3	Controller Design	64
6.3.1	Active Fault-Tolerant Control Adaption	64
6.3.2	Actuator Fault Modeling using Uncertainties	66

6.3.3	Pole Restriction	66
6.3.4	Shifted Generalized Nyquist Criterion	68
6.3.5	Adapted μ -Analysis	69
6.3.6	Fault-Tolerant Control Synthesis	70
6.3.7	Controller Initialization	71
6.3.8	Stability of the Switching Control Approach	74
6.4	Simulations	74
6.5	Flight Experiments	76
6.6	Conclusions	80
7	Concluding Remarks	85
7.1	Outlook on Future Research	87
Bibliography		89
Appendix		101
1	Nonlinear Aerodynamic Parameters of the senseSoar UAS	101
2	Linear Model of the senseSoar UAS	103
3	Nonlinear Aerodynamic Parameters of the Techpod UAS	104
