

4.4.8	Reference configuration reconstruction	42
4.4.9	Nonlinear FEA-based traction reconstruction	42
4.4.10	Immunofluorescence	43
4.4.11	<i>In-silico</i> image generation	43
4.4.12	Data analysis and statistics	44
4.4.13	Data availability	44
4.5	Supplementary material	44
4.5.1	Stability of QDs	44
4.5.2	Mechanical and optical properties of CY52-276 silicone	45
4.5.3	Inter-disc spacing of the cTFM platform	46
4.5.4	Electrohydrodynamic nanodrip-printing on polyacrylamide substrates	47
4.5.5	Cytotoxicity assay	47
4.5.6	Reconstruction of the displacement field	48
4.5.7	Sensitivity of the cTFM platform	49
4.5.8	Detection of Z-position of QD nanodiscs	49
4.5.9	Correlative traction force microscopy using anti-phospho-antibodies	50
4.5.10	Triangular mesh reconstruction	51
5	Factors Affecting the Reconstruction of Cellular Traction Forces	53
5.1	Introduction	55
5.2	Methods	56
5.2.1	In-silico generation of TFM input data	56
5.2.2	Nonlinear FEM based TFM	59
5.2.3	Quality measures for the traction force reconstruction	60
5.3	Results	62
5.3.1	Displacement field resolution and interpolation	62
5.3.2	Displacement field noise	63
5.3.3	Out-of-plane displacement data	64
5.3.4	Constitutive behaviour of the substrate material	65
5.3.5	Modelling of geometric and material nonlinearities	67
5.4	Discussion	68
5.5	Conclusions	71
III	Multiscale Modelling of Electrospun Networks	73
6	Discrete Network Modelling Approaches	75
6.1	Network geometry and discretization	76
6.2	Boundary conditions	78
6.3	Non-affine microscopic behaviour	81
6.4	Macroscopic homogenization	82
7	A 2.5D Approach to the Mechanics of Electrospun Fibre Mats	85
7.1	Simulation framework	88

7.1.1	Generation of 2.5D network RVEs	88
7.1.2	Periodic boundaries	92
7.1.3	FE analysis and post-processing	92
7.2	Numerical analysis	95
7.2.1	Periodic boundary conditions for infinite fibres	95
7.2.2	Effect of mirroring on material symmetry	96
7.2.3	Convergence of effective properties	97
7.3	Application to experimental data	98
7.4	Interaction thickness and segment lengths	103
7.4.1	Macroscopic characteristics	103
7.4.2	Stretch heterogeneity and segment reorientation	104
7.4.3	Change of porosity	105
7.5	Discussion	106
7.5.1	Network models specific to ESN	106
7.5.2	Predictions based on physical parameters	107
7.5.3	Access to microstructural mechanisms	108
7.5.4	Periodic boundary conditions	108
7.5.5	Towards computer-designed ESNs	109
7.5.6	Remarks and limitations	109
7.6	Conclusions	110
7.7	Supplementary information	111
7.7.1	Relations between average segment length, cross-link density and interaction thickness	111
7.7.2	Computation of the compliance tensor \mathbf{S}	112
7.7.3	Computational efficiency	113
7.7.4	Effects of interaction thickness and limited cross-linking probability	113
8	A 3D Model for ESNs and its Application to Inform the Reduced 2.5D Approach	115
8.1	Introduction	117
8.2	Generation of 3D ESN RVEs and associated mechanical analysis	119
8.2.1	Description of fibre shape	119
8.2.2	Virtual spinning: generation of 3D RVEs	121
8.2.3	Extraction of network parameters	122
8.2.4	Computation of homogenised RVE response	123
8.3	Comparison with the reduced 2.5D model	125
8.3.1	Reduced 2.5D modelling approach	125
8.3.2	A set of test cases	126
8.3.3	Validation of the interaction thickness concept	126
8.3.4	Comparison of homogenised mechanical and fibre kinematic responses	128
8.3.5	Networks with distributed fibre diameters	129
8.3.6	Parameter reduction of 2.5D approach	130
8.4	Discussion and conclusion	132

8.5	Supplementary information: convergence studies	135
IV	Mechanical Environment Offered to Cells by Network-Like Materials	139
9	On the Mechanical Interaction of Cells with Collagenous Networks and Synthetic Equivalents	141
9.1	Phenomena observed in biopolymer networks	141
9.1.1	Tissue stiffness at the different length scales	141
9.1.2	Transfer of externally induced deformations	142
9.1.3	Cell induced deformations	143
9.2	Influence of microstructure in mechanobiological studies on electrospun networks	144
9.2.1	Influence of fibre diameter and orientation	144
9.2.2	Fibre material stiffness	144
9.2.3	Analysis of deformations at cellular length scale	145
10	Numerical Assessment of the Mechanical Micro-Environment Offered by ESN	147
10.1	Introduction	147
10.2	Methods	148
10.2.1	Multiscale simulation framework for ESN	148
10.2.2	Modelling of cell-network interactions	148
10.2.3	Modelled electrospun networks	149
10.2.4	Analysis of cellular forces on homogeneous substrates	151
10.3	Numerical results	152
10.3.1	Kinematics at cellular length scale in ESN	152
10.3.2	Network stiffness at cellular length scale	156
10.3.3	Sensitivity of the multiscale stiffness to topological parameters	159
10.4	Discussion	160
10.4.1	Micro-kinematics and their impact on mechanical perturbations in networks	160
10.4.2	Multiscale stiffness in ESN	161
10.4.3	Spatial heterogeneities at cellular length scale	162
10.5	Conclusions	163
V	Conclusions & Outlook	165
11	Conclusions and Outlook	167
11.1	Main contributions	168
11.2	Concluding remarks	169
11.3	Future work	171

Appendices		175
A Mechanical Characterization of Electrospun Implants for Pelvic Floor Reinforcement		
A.1	Materials	175
A.2	Methods	176
A.2.1	Tensile tests	177
A.2.2	Suture retention tests	177
A.3	Results	178
A.3.1	Uniaxial monotonic response	178
A.3.2	Cyclic behaviour	178
A.3.3	Influence of environmental conditions	180
A.3.4	Suture retention strength	180
A.4	Conclusions	181
B A 3D Discrete Network Model for Collagenous Membranes		
B.1	Model formulation	182
B.1.1	Network topology generation	183
B.1.2	Mechanical modelling of fibers and matrix	183
B.1.3	Numerical solution and post-processing	184
B.2	Comparison to experimental data	185
B.2.1	Macroscopic Response	185
B.2.2	Microscopic Kinematics	186
B.3	Influence of topology and fibre behaviour	187
B.4	Conclusions	188
C References		189
D Curriculum Vitae		215
