

Contents

1 Introduction	15
1.1 Motivation	15
1.2 Chapter Overview	16
2 Methodological Fundamentals	19
2.1 Univariate Encoding Methods in Neuroimaging	19
2.2 Multivariate Decoding Methods in Neuroimaging	21
2.2.1 Fundamentals of Classification	21
2.2.2 Classification with Support Vector Machines	24
2.2.3 Representational Similarity Analysis	26
3 Applications of Multivariate Decoding Analysis to Research Topics	31
3.1 Automated Diagnosis of Psychiatric Disorders Based on RS-fMRI	33
3.2 The Effect of Expectation on Somatosensory Processing	34
3.3 Prediction of Motor Excitability From Neurofeedback Modulation	35
3.4 Scientific Contributions	37
3.5 Publications	37
4 Automated Diagnosis of Psychiatric Disorders Based on RS-fMRI	39
4.1 Abstract	39
4.2 Introduction	40
4.3 Data	41
4.3.1 Feature Calculation	41
4.3.2 Subject Selection	42
4.4 Feature Selection	43
4.4.1 Filter Methods	43
4.4.2 Wrapper Methods	44
4.5 Performance Assessment	44
4.5.1 Test Accuracy versus Training Accuracy	44
4.5.2 Accuracy, Specificity and Sensitivity	44
4.5.3 Cross-Validation	45
4.6 Classifiers	46
4.6.1 Logistic Regression	48
4.6.2 Lasso-Regularized Logistic Regression	49
4.6.3 Support Vector Machines	49
4.6.4 Probabilistic Neural Networks	49
4.6.5 Linear Discriminant Analysis	50
4.6.6 Gaussian Naive Bayes	51
4.7 Applying the Classifiers to the Abide Dataset	51

4.8 Pitfalls and Challenges	51
4.8.1 Cross-Validation and Feature Selection: The Peeking Problem	51
4.8.2 Building Classifiers for Multisite Data	52
4.8.3 Small Sample Size	53
4.8.4 Comparison of Classification Accuracy to Chance Level	53
4.9 Summary and Concluding Remarks	54
4.10 Appendix A1	55
4.10.1 Preprocessing of the fMRI Data	55
4.11 Appendix A2	56
4.11.1 Tests for Classification Significance	56
5 The effect of expectation on somatosensory processing	57
5.1 Abstract	57
5.2 Introduction	57
5.3 Results	59
5.3.1 Behavioral Results	61
5.3.2 fMRI Results	62
5.3.3 Expectation Suppression and Finger Somatotopy	66
5.3.4 Expectation Induced Behavior and Neuronal Changes Reveal a Linear Relationship	71
5.4 Discussion	73
5.5 Methods and Materials	76
5.5.1 Subjects	76
5.5.2 fMRI Scanning Procedure	76
5.5.3 Stimuli	76
5.5.4 Experimental Paradigm	77
5.5.5 fMRI Preprocessing	77
5.5.6 Regions of Interest	77
5.5.7 Multi-Voxel Pattern Analysis	78
6 Prediction of Motor Excitability from EEG Data	81
6.1 Abstract	81
6.2 Introduction	82
6.3 Results	85
6.3.1 MEP Neurofeedback Led to Bidirectional Changes in Corticospinal Excitability	85
6.3.2 Control Group Receiving no Neurofeedback Did Not Learn to Change State	86
6.3.3 EEG Data Classification	86
6.3.4 Retention and Duration of Effects	88
6.3.5 MEP Amplitudes in the Opposite Hemisphere	88
6.4 Discussion	89
6.4.1 Practical Utility of MEP Neurofeedback	90
6.5 Materials and Methods	91
6.5.1 Participants	91
6.5.2 TMS-based Neurofeedback	91
6.5.3 Format of Neurofeedback	92
6.5.4 EEG Session	92
6.5.5 Control Group	93

6.6	Data Processing and Analysis	93
6.6.1	MEP data	93
6.6.2	EEG data	94
6.6.3	Classification of Distinct Brain States	94
6.7	Follow-up Experiment 6 Months Later	94
6.7.1	Retention Testing Aftereffects Measurement	95
6.7.2	Excitability in the Opposite Hemisphere	95
6.7.3	Feedback-free Measurements	95
7	Discussion	97
7.1	Automated Diagnosis of Psychiatric Disorders Based on RS-fMRI	97
7.2	The Effect of Expectation on Somatosensory Processing	99
7.3	Prediction of Motor Excitability From Neurofeedback Modulation	103
7.4	Concluding Remarks	105

List of Figures

2.1	Univariate encoding analysis of fMRI data	21
2.2	Multivariate decoding analysis of task-based fMRI data	24
2.3	Support Vector Machines as Maximum Margin Classifiers	25
2.4	Soft-margin Support Vector Machines	26
2.5	Representational Similarity Analysis based on correlation distance	27
3.1	Comparison between univariate and multivariate decoding analysis	32
3.2	Multivariate decoding analysis of resting-state fMRI data	33
4.1	Calculation of connectivity features	42
4.2	K-fold cross-validation	46
4.3	Nested cross-validation	47
4.4	Linear versus non-linear classification	48
4.5	Kernel mapping	49
4.6	Probabilistic neural network	50
5.1	Experimental setup for somatosensory dissociation task	60
5.2	Behavioral stimulus dissociation performance based on probabilistic context	61
5.3	Univariate activation from stimulation events	62
5.4	Searchlight based whole-brain classification and ROI-based RSA	64
5.5	Searchlight classification in contralateral sensorimotor hand-region	68
5.6	Univariate activation maps induced by expectation of stimulation site	70
5.7	Classification of pre-stimulus neuronal activity patterns	71
5.8	Generalization of pre-stimulus neuronal activity patterns	72
5.9	Linear regression for effects of expectation on behavior and neuronal information content	73
6.1	Experimental setup of neurofeedback protocol	84
6.2	MEP amplitudes during neurofeedback	85
6.3	Feature selection of the EEG data	87
7.1	Hierarchical Convolutional Neuronal Network	101
7.2	Predictive Generative Model	102
