

Table of contents	Page
Summary.....	ii
Acknowledgements.....	v
List of Figures.....	xi
List of Tables.....	xii
List of Abbreviations.....	xiii
Chapter 1 Introduction.....	1
1.1 Global malaria burden and progress in Swaziland.....	2
1.2 Role of surveillance in malaria control and elimination.....	4
1.2.1 Importance of rapid response in malaria surveillance.....	5
1.3 Environmental factors affecting malaria transmission.....	6
1.3.1 Temperature.....	8
1.3.2 Precipitation.....	8
1.3.3 Humidity.....	9
1.4 Earth observation and malaria control.....	9
1.5 Malaria situation in Swaziland.....	11
1.6 Applications of environmental data in malaria epidemiology.....	13
1.7 Significance of the proposed research.....	14
1.8 Objectives of the thesis.....	15
1.8.1 Specific objectives.....	15
1.8.2 Sources of data.....	16
Chapter 2 Assessing the relationship between environmental factors and malaria vector breeding sites Swaziland using multi-scale remotely sensed data.....	17
2.1 Introduction.....	19
2.2 Materials and methods.....	21
2.2.1 Study area.....	21
2.2.2 Entomological data.....	21
2.2.3 Remotely sensed data.....	23
2.2.4 Statistical analysis.....	29
2.2.5 Logistic regression.....	29
2.3 Results and discussion.....	30
2.3.1 The field campaign.....	30
2.3.2 Decision tree analysis.....	30
2.3.3 Logistic regression.....	33

2.4 Conclusions.....	35
Chapter 3 Towards a consolidated use of remotely sensed data in epidemiology: a review of existing and potential products for vector-borne disease mapping ..	38
3.1 Introduction.....	40
3.2 Methods.....	42
3.2.1 Review, collation and inventorization of RS products.....	42
3.2.2 Satellites and products selection criteria.....	43
3.2.3 Processed vs. derived RS data.....	43
3.2.4 RS products previously used in disease-mapping and new potential variables..	44
3.3 Results.....	45
3.3.1 RS data sources.....	45
3.3.2 Data processing.....	45
3.3.3 Processed RS variables for vector-borne disease modelling.....	46
3.3.4 Derived RS variables for vector-borne disease modelling.....	47
3.4 Discussion.....	47
3.4.1 Conclusions.....	50
Chapter 4 Bayesian geostatistical modelling to assess spatio-temporal variations and elapsing time for malaria incidence in Swaziland.....	61
4.1 Introduction.....	63
4.2 Methods.....	66
4.2.1 Malaria incidence data.....	66
4.2.2 Environmental data collection and processing.....	66
4.2.3 Bayesian geostatistical modeling.....	67
4.2.4 Determining important lags using variable selection.....	68
4.3 Results.....	69
4.3.1 Bayesian geostatistical modelling.....	69
4.4. Discussion.....	75
4.4.1 Conclusions.....	76
Chapter 5 An evaluation of potential environmental indices for predicting malaria incidence in Swaziland.....	77
5.1 Introduction.....	79
5.2 Methods.....	81
5.2.1 Study area.....	81
5.2.2 Malaria incidence data.....	82

5.2.3 Vegetation indices data.....	82
5.2.4 Performing principal component analysis on the remote sensing bands.....	84
5.2.5 Statistical analysis.....	85
5.3 Results.....	86
5.3.1 Principal component analysis.....	86
5.3.2 Bivariate logistic regression analysis.....	86
5.3.3 Negative binomial regression.....	88
5.4 Discussion.....	90
5.4.1 Conclusions.....	91
Chapter 6 Discussion and outlook.....	92
6.1 Significance of the research work.....	93
6.1.1 Key messages from the study.....	93
6.1.2 Contributions to malaria surveillance and response.....	96
6.1.3 Contributions to applications of remote sensing products in epidemiology.....	97
6.2 Study limitations.....	99
6.3 Concluding remarks and extension of this work.....	100
Bibliography.....	101
Curriculum vitae.....	119
