Preface	v
Vorwort (German preface).....	ix
1 Linear and nonlinear optics	1
1.1 Linear optics	2
1.2 Nonlinear optics	3
1.2.1 Role of the material in nonlinear processes	4
1.2.2 Parametric processes	4
1.2.3 Non-parametric processes	4
1.3 Summary	6
2 Nonlinearities in semiconductor optical amplifiers	7
2.1 Basic description of travelling-wave semiconductor optical amplifiers.....	7
2.2 The optical amplification process in SOAs	9
2.3 Gain.....	12
2.4 Nonlinearities in SOAs	14
2.4.1 Gain saturation and nonlinear gain compression.....	17
2.4.2 Carrier-induced change in refractive index.....	19
2.5 Summary	22
3 Dynamics in SOAs	25
3.1 Introduction	25
3.2 Basics of the dynamics in an SOA.....	25
3.2.1 Radiative transitions	25
3.2.2 Carrier density dynamics	27
3.2.3 Carrier density and energy dynamics.....	27
3.2.4 Rate equation approximation.....	34
3.3 Gain dynamics	35
3.3.1 Gain overshoot	36
3.3.2 Gain recovery	37
3.4 Refractive index dynamics	38
3.4.1 Theory.....	38

3.4.2	Experimental methods for the study of the refractive index dynamics.....	43
3.4.3	Phase modulation	44
3.4.4	Nonlinear polarization rotation	48
3.5	Correlation between gain and refractive index dynamics	50
3.5.1	Ultrafast refractive index dynamics.....	50
3.5.2	Dynamics of gain and phase in an SOA	51
3.6	Summary	55
4	Measurement and modeling of optical spectra.....	57
4.1	Introduction	57
4.2	Experimental setup and measurements.....	57
4.3	Information retrieval of refractive index dynamics from spectra... ..	58
4.3.1	Probe light spectrum.....	58
4.3.2	Pump pulse spectrum after the SOA.....	59
4.3.3	Analytical model describing the SOA gain and refractive index dynamics.....	61
4.3.4	Pump and probe light spectra at SOA output: comparison of model and measurements with experiment	85
4.4	Selecting spectral regions to perform optical filter based wavelength conversion	89
4.5	Influence of operating parameters on the spectra	92
4.6	Filter based all-optical logic functions – a suggestion	99
4.7	Summary	102
5	All-optical wavelength conversion and regeneration based on SOAs..	103
5.1	Introduction	103
5.2	Patterning effect	107
5.3	All-optical wavelength conversion and regeneration.....	109
5.3.1	All-optical wavelength conversion and regeneration based on cross-gain modulation (XGM)	109
5.3.2	All-optical wavelength conversion and regeneration based on cross-phase modulation (XPM)	111
5.3.3	SOA-based wavelength conversion using optical filtering ...	114
5.4	Summary	125
6	All-optical wavelength and modulation format conversion.....	127
6.1	Introduction	127
6.2	All-optical format conversion	129

6.3	All-optical wavelength and format conversion based on SOAs	129
6.3.1	All-optical wavelength conversion and RZ to VSB format change	130
6.3.2	All-optical wavelength conversion and RZ to CSRZ format change	133
6.4	Evidence of phase patterning effects in the spectrum	135
6.5	Summary	139
Appendix A	Correlation between refractive index and gain dynamics of the SOA and output pulse shape and phase	141
A.1	Correlation between refractive index dynamics of the SOA and output pulse shape	141
A.2	FCA _{TPA} process.....	142
Appendix B	Calculation of integrals relevant to the analytical model from Section 4.3.3	147
Appendix C	Degenerate and nondegenerate TPA-processes	153
C.1	Absorption coefficient	153
C.2	Degenerate two-photon absorption (TPA)	154
C.3	Nondegenerate TPA process.....	155
C.4	Sufficiently weak probe light	156
C.5	Kerr nonlinearity	157
	List of abbreviations.....	159
	Bibliography.....	167
	Conference contributions and publications	179
	Acknowledgements	185
	Curriculum vitae	187
