

# Table of contents

Abbreviations .....	VI
Summary .....	VIII
Zusammenfassung .....	XII
<b>1 Introduction .....</b>	<b>1</b>
1.1 Natural whey cultures.....	2
1.2 Microbial community composition in natural whey cultures.....	3
1.2.1 Bacterial species .....	3
1.2.2 Bacteriophages .....	3
1.2.3 Eukaryotic species .....	4
1.2.4 Dynamics and interactions in communities of natural whey cultures .....	5
1.3 Natural history of <i>Lactobacillus helveticus</i> .....	6
1.4 Phenotypic characteristics of <i>Lactobacillus helveticus</i> and their implications for biotechnological applications .....	9
1.4.1 Proteolysis .....	9
1.4.2 Cell lysis .....	11
1.4.3 Health promoting properties of <i>Lactobacillus helveticus</i> .....	13
1.5 Intra-species diversity.....	16
1.5.1 The concept of species and strains in prokaryotes.....	16
1.5.2 <i>Lactobacillus helveticus</i> strain diversity.....	17
1.6 Drivers for the diversification and maintenance of strain diversity .....	19
1.6.1 Insertion sequence .....	20
1.6.2 Bacteriophages .....	21
1.6.3 Adaptation to micro-niches .....	24
1.6.4 Coexistence through metabolic interdependencies.....	25
1.6.5 Coexistence through non-transitive competition .....	25
1.7 Assessing the intra-species diversity in environmental samples .....	26
1.7.1 Comparing phenotypic characteristics of isolates .....	26
1.7.2 Genotypic characterization of isolated strains.....	27
1.7.3 Culture-independent approaches for strain typing.....	29
1.8 Aim of the thesis.....	34
1.8.1 Background.....	34
1.8.2 General objective.....	35
1.8.3 Specific objectives.....	35
<b>2 Detection and enumeration of <i>Lactobacillus helveticus</i> in dairy products.....</b>	<b>37</b>
2.1 Abstract .....	38
2.2 Introduction .....	38

2.3	Material and methods	40	3.6	Conclusions	84
2.3.1	Bacterial strains, media, and growth conditions	40	3.7	Author contributions	84
2.3.2	DNA extraction	41	3.8	Acknowledgement	84
2.3.3	Oligonucleotide primer and probe design	44	4	<b>Population dynamics of <i>Lactobacillus helveticus</i> in Swiss Gruyère-type cheese manufactured with natural whey cultures</b>	<b>85</b>
2.3.4	Real-time PCR assay	44	4.1	Abstract	86
2.3.5	Construction of a plasmid standard	45	4.2	Introduction	86
2.3.6	qPCR specificity, sensitivity, and efficiency	45	4.3	Material and methods	89
2.3.7	Enumeration of <i>L. helveticus</i> in dairy products	48	4.3.1	NWC collection and cheesemaking	89
2.3.8	Cheesemaking	48	4.3.2	Chemical analysis	90
2.4	Results	49	4.3.3	Microbiological analysis	90
2.4.1	Specificity of the <i>pheS</i> targeted primers	49	4.3.4	Yeast identification	91
2.4.2	Copy number of <i>pheS</i> in <i>L. helveticus</i> genomes	49	4.3.5	Estimation of <i>L. helveticus</i> using quantitative PCR	91
2.4.3	Sensitivity and linearity of the <i>pheS</i> -specific qPCR	49	4.3.6	<i>Lactobacillus helveticus</i> population profiling	92
2.4.4	Applicability of the novel qPCR assay	51	4.4	Results	93
2.4.5	Absence of inhibitory compounds in the DNA extractions used for qPCR	54	4.4.1	Chemical analyses	93
2.5	Discussion	55	4.4.2	Microbiological analyses	94
2.6	Conclusions	58	4.4.3	Enumeration of <i>L. helveticus</i> in NWC and cheese	97
2.7	Acknowledgement	58	4.4.4	<i>L. helveticus</i> diversity and abundance	99
3	<b>Amplicon sequencing of the <i>slpH</i> locus permits culture-independent strain typing of <i>Lactobacillus helveticus</i> in dairy products</b>	<b>59</b>	4.5	Discussion	100
3.1	Abstract	60	4.6	Conclusions	104
3.2	Introduction	60	4.7	Acknowledgements	104
3.3	Material and methods	62	4.8	Authors contributions	104
3.3.1	DNA preparation	62	5	<b>The strain-specific peptidoglycan hydrolase LysLH is associated with enhanced autolysis in <i>Lactobacillus helveticus</i></b>	<b>105</b>
3.3.2	Target detection	62	5.1	Abstract	106
3.3.3	Amplification of the <i>slpH</i> locus	66	5.2	Introduction	106
3.3.4	Culture-dependent typing	66	5.3	Material and methods	108
3.3.5	PCR assays for <i>L. helveticus</i> and <i>L. gallinarum</i> species confirmation	67	5.3.1	Bacterial strains and genome sequences	108
3.3.6	<i>slpH</i> gene semiconductor sequencing	68	5.3.2	Detection of cell lytic activity	108
3.3.7	Sequence data analysis	69	5.3.3	Pangenome-wide association analysis	109
3.3.8	Validation	69	5.3.4	Sequence analysis	109
3.4	Results	71	5.3.5	Gene synthesis, cloning, and expression	110
3.4.1	Characteristics of the <i>slpH</i> locus	71	5.3.6	RNA extraction and sequencing	110
3.4.2	Evidence for the absence of <i>L. gallinarum</i> in dairy products	76	5.3.7	Transcription analyses	111
3.4.3	Experimental validation	77	5.4	Results	112
3.4.4	Comparison culture-dependent vs. culture-independent typing	77	5.4.1	Peptidoglycan hydrolase activity	112
3.4.5	Distribution of <i>L. helveticus</i> in NWCs	78	5.4.2	Genome wide association analysis and <i>in silico</i> analysis of the identified genes	115
3.4.6	Development of <i>L. helveticus</i> Strains in Raclette Cheeses	79			
3.5	Discussion	81			

5.4.3	The presence of prophages in the genome of <i>L. helveticus</i> FAM 8105.....	116
5.4.4	Expression of the synthesized <i>lysLH</i> gene.....	117
5.4.5	Prophage 4 expression analysis .....	118
5.5	Discussion .....	120
5.6	Conclusions .....	122
<b>6</b>	<b>General conclusions and outlooks .....</b>	<b>123</b>
	References .....	128
	Acknowledgements .....	144
	Curriculum vitae .....	145
