

Table of Contents

I. List of Abbreviations 3

1 Summary 6

2 Introduction 7

2.1 Prostate Cancer 7

2.2 Associations of Short Chain Dehydrogenases (SDRs) and Aldo Keto Reductases (AKRs) with Cancer 11

2.3 Carbonyl Reductases of the SDR and AKR Families 17

2.4 The “Orphan” Enzyme DHRS7 21

2.5 Deorphanization 25

3 Aims of the Thesis 27

4 Chapter 1: Toward the Identification of Substrates of DHRS7 29

4.1 Published article: DHRS7 (SDR34C1) - a New Player in the Regulation of Androgen Receptor Function by Inactivation of 5 α -Dihydrotestosterone? 34

4.2 Further Characterization of DHRS7 Activity 43

5 Chapter 2: Functional and Phenotypical Characterization Following DHRS7 Depletion 67

5.1 Assessing the Phenotype of Breast and Adrenal Cancer Cell Lines under siRNA mediated DHRS7 Silencing 69

5.2 Assessing the Phenotype of LNCaP Prostate Cancer Cells under siRNA mediated DHRS7 Silencing by Untargeted Proteomics 81

6 General Discussion 115

7 Acknowledgements 118

8 Literature 119

9 Supplementary Data 134
