

TABLE OF CONTENTS

| | |
|---|----|
| SUMMARY | 1 |
| OVERVIEW AND AIM OF THE THESIS | 3 |
| CHAPTER I | 5 |
| 1. Abstract | 7 |
| 2. Introduction | 8 |
| 3. Animals, Material and Methods | 9 |
| 3.1 Antimicrobial susceptibility testing and antibiotic resistance gene detection | 9 |
| 3.2 QAC susceptibility testing and QAC resistance gene detection | 9 |
| 3.3 Genetic diversity | 10 |
| 4. Results | 10 |
| 4.1 Sampling and genetic diversity | 10 |
| 4.2 Antibiotic and QAC resistance | 10 |
| 5. Discussion | 11 |
| 6. Conclusion | 13 |
| 7. Acknowledgements | 13 |
| 8. Tables | 14 |
| 9. References | 19 |
| ORAL PRESENTATION | 23 |
| <p>Hausherr, A., Perreten, V. 2018. Resistance to antibiotics and quaternary ammonium compounds of <i>Escherichia coli</i> from calves at the beginning of the rearing period in Switzerland. Oral presentation at the Continuous Education and Group-Meeting, Research, IVB, Vetsuisse Faculty, Bern: 24. January 2018</p> | |
| APPENDIX | 29 |
| - Multiple alignment of GyrA of colistin-susceptible and –resistant <i>E. coli</i> | 30 |
| - Multiple alignment of ParC of colistin-susceptible and –resistant <i>E. coli</i> | 32 |
| - Table: MIC of 100 <i>E. coli</i> from calves at the beginning of the rearing period | 33 |
| - Table: MIC ADBAC, detected resistance genes and mutations in GyrA and ParC from <i>E. coli</i> | 35 |
| - Table: Detected resistance genes from <i>E. coli</i> | 37 |
| - Figure: Isolates susceptibility to ADBAC concentration (100 isolates) | 41 |
| - Figure: Isolates susceptibility to ADBAC concentration (100 isolates) divided up into management 1 (i) and management 2 (k) | 42 |

| | |
|--|--------|
| - Figure: Distribution of quaternary ammonium compound (QAC) resistance profile..... | 43 |
| - Figure: Distribution of multidrug resistance profile..... | 44 |
| - Figure: Total number of resistance per antibiotic out of 100 samples | 45 |
| - Figure: Number of isolates resistant to antibiotics | 46 |
| - Figure: Absolute number of resistance per antibiotic out of 100 samples | 47 |
| - Figure: Number of resistances per isolate (n=100 isolates) to 13 antibiotics tested | 48 |
| - Figure: Number of resistances per isolate (n=100 isolates) to 13 antibiotics tested, divided up in management 1 (i) and management 2 (k)..... | 49 |
| - Figure: Total number of resistances per antibiotic compared to total number of resistances to ADBAC out of 100 samples | 50 |
| - Figure: Number of resistances per antibiotic from 50 samples from management 1 (i) compared to number of resistances to ADBAC management 1 (i) | 51 |
| - Figure: Number of resistances per antibiotic from 50 samples from management 2 (k) compared to number of resistances to ADBAC management 2 (k) | 52 |
| - Figure: MIC ADBAC compared to corresponding number of resistances per isolate | 53 |
| - Table: MIC ABDAC compared to corresponding number of resistances per isolate | 53 |
| - Figure: MIC Antibiotic Resistance Profile combined with MIC ADBAC Profile per isolate (n=100) | 54 |
| - Figure: Distribution of place of origin of the 100 calves sampled in Switzerland ... | 55 |
| - Instruction protocol for preparing the Lysates..... | 56 |
| - Primer list..... | 57 |
| - Instruction protocol for Minimal inhibitory concentrations (MIC) by broth microdilution..... | 58 |
| - Instruction protocol for Microarray | 59 |
| - Instruction protocol for PCR "Hotstart" and repetitive palindromic PCR..... | 61 |
| - Instruction protocol for sequencing..... | 62 |
| CURRICULUM VITAE..... | 65 |
