Summary	3
Sommario	5
1 Introduction	7
1.1 Atmospheric Structure	7
1.2 Atmospheric composition	8
1.3 Tropospheric structure	9
1.4 Atmospheric chemistry	10
1.5 Secondary organic aerosol	14
1.6 The autoxidation mechanism	15
1.7 New particle formation	16
1.8 The CLOUD experiment	18
1.9 The Anthropocene	18
1.10 Atmospheric science in the Anthropocene	20
1.11 Climate change	20
1.12 Human health aspects	22
2 Thesis objectives and outline	24
3 Methodology	26
3.1 The CLOUD Chamber	26
3.2 High Altitude Research Station Jungfraujoch	28
3.3 Chemical ionization mass spectrometry	29
4 Formation of highly oxygenated molecules from α -pinene ozonolysis: chemical characteristics, mechanism and kinetic model development	32
4.1 Introduction	33
4.2 Experimental	34
4.3 Results and discussion	36
4.3.1 Mechanism description	36
4.3.2 Experimental results	44
4.3.3 Master Chemical Mechanism HOMs add-on	49
4.3.4 Kinetic analysis	52
4.3.5 General discussion and conclusions	56
4.4 Acknowledgements	57
4.5 Supporting information	57
5 Formation of highly oxygenated organic molecules from aromatic compounds	59
5.1 Introduction	60

5.2	Experimental	61
5.3	Results and discussion	63
5.3.1	Comparison of HOMs from different ArHC	63
5.3.2	ArHC HOMs formation mechanism	68
5.4	Conclusions	72
5.5	Supporting information indications	73
5.6	Acknowledgements	73
5.7	Supporting information	74
5.7.1	Section 1	74
5.7.2	Section 2	76
5.7.3	Section 3	81
6	HOMs observation at the High Altitude Research Station Jungfraujoch during day- and night-time.	86
6.1	Introduction	87
6.2	Experimental	88
6.3	Results and discussion	89
6.4	Supporting information indication	94
6.5	Acknowledgements	94
6.6	Supporting information	94
7	Conclusions and Outlook	95
	Acknowledgements	97
	Curriculum Vitae	98
	Bibliography	103
	Tables	114
	Tables Supplementary	115
	Figures	116
