

CONTENTS

ABSTRACT	i
ZUSAMMENFASSUNG	iii
CONTENTS	vii
LIST OF FIGURES	xi
LIST OF TABLES	xv
1 INTRODUCTION	1
1.1 Transition metal isotopes	1
1.2 Concentration profiles in the ocean	2
1.3 Sinks	8
1.4 Sources	10
1.4.1 Rivers	12
1.4.2 The importance of particulates	17
1.5 Thesis structure	19
2 THE AMAZON BASIN	21
2.1 Global Importance of the Amazon River and its major tributaries	21
2.2 Birth of the Amazon River	24
2.3 Geology	25
2.4 Temperature and precipitation	27
2.5 Water and suspended sediment variability	28
2.6 Major tributary chemistries	31
2.6.1 White water rivers	32
2.6.2 Black water rivers	32
2.6.3 Clear water river	33

3 METHODS FOR SAMPLING AND ANALYSIS.....	35
3.1 Sample collection.....	35
3.2 Filtering strategy and procedure.....	36
3.3 Dissolved-phase sample processing.....	39
3.4 Particulate Sample Processing	40
3.5 Elemental concentration analysis	41
3.6 Element separation and purification for isotope analysis.....	41
3.6.1 Specific modifications for particulate samples.....	45
3.7 Isotopic analysis.....	46
3.8 Anion, DOC, water isotope analysis	47
3.9 Assessment of data quality.....	48
3.9.1 Element vs Neptune Data.....	48
3.9.2 Sample duplicates.....	48
3.9.3 Analytical concerns for copper	50
4 Mo AND Ni IN THE DISSOLVED PHASE OF THE AMAZON RIVER.....	55
4.1 Results.....	56
4.1.1 Hydrological Conditions	56
4.1.2 Comparison with previous data and general observations from the 0.45 μm filtered fraction.....	59
4.1.3 Temporal variability.....	61
4.1.4 Chemical trends of tributaries.....	62
4.1.5 Method comparison and general observations from the colloidal and ultrafiltered fractions.....	64
4.2 Discussion.....	68
4.2.1 An assessment of the utility of the colloidal and ultrafiltration data.....	68
4.2.2 Does lithology exert a significant control on dissolved load Mo and Ni and their isotopes in the Amazon basin.....	72
4.2.3 Weathering regime as the main control on dissolved load Mo isotopes in the Amazon basin.....	76
4.2.4 Ni isotopes in the Amazon basin: controls from mixing, secondary mineral formation and the colloidal fraction in soils.....	81
4.2.5 Secondary mineral formation.....	83
4.2.6 The seasonal role of colloidal material	84
4.2.7 The role of pH in the black water end-member	86
4.2.8 Seasonal impacts on the dissolved load.....	87
4.2.9 Conclusions.....	89
5 Fe AND Zn IN THE DISSOLVED PHASE OF THE AMAZON BASIN.....	95
5.1 Results.....	96
5.1.1 Comparison with previous data and general observations from the 0.45 μm filtered fraction	96
5.1.2 Temporal variability.....	99

5.1.3 Trends between tributaries.....	100
5.1.4 Method comparison and general observations for the colloidal and ultrafiltered fractions.....	102
5.2 Discussion.....	106
5.2.1 An assessment of the utility of the colloidal and ultrafiltration data for Zn and Fe.....	106
5.2.2 Does lithology exert a significant control on the dissolved load Zn and Fe and their isotopes in the Amazon basin?.....	109
5.2.3 Weathering regime as the main control on dissolved load Zn isotopes in the Amazon Basin	112
5.2.4 Secondary mineral formation and the nature of colloidal material: control on Fe isotopes in the Amazon Basin.....	117
5.2.5 Dissolved phase iron isotopes and secondary mineral formation	119
5.2.6 Seasonal impacts on the dissolved load.....	124
5.2.7 Larger scale implications of the Amazon data	126
5.2.8 Conclusions.....	129
6 ISOTOPE SIGNATURES OF THE SUSPENDED SEDIMENTS IN THE AMAZON BASIN	133
6.1 Leaching method	134
6.2 Results.....	138
6.2.1 Distribution of transition metals between phases	139
6.2.2 Relative distribution of phase-diagnostic elements	142
6.2.3 Images before and after leaching.....	143
6.2.4 Particulate Ni isotopes in the Amazon Basin	145
6.2.5 Particulate Fe isotopes in the Amazon Basin	146
6.2.6 Particulate Zn isotopes in the Amazon Basin.....	147
6.3 Discussion.....	149
6.3.1 Method assessment	149
6.3.2 Relationships between element partitioning and river chemistry	151
6.3.3 Origin of particulate isotope signatures	153
6.3.4 Particulates as a control for dissolved phase isotope signatures.....	159
6.3.5 Conclusions.....	168
7 CONCLUSIONS AND OUTLOOK	173
7.1 Dissolved and particulate Mo and $\delta^{98}\text{Mo}$ in the Amazon	173
7.2 Dissolved and particulate Ni and $\delta^{60}\text{Ni}$ in the Amazon.....	174
7.3 Dissolved and particulate Fe and $\delta^{56}\text{Fe}$ in the Amazon.....	175
7.4 Dissolved and particulate Zn and $\delta^{66}\text{Zn}$ in the Amazon.....	175
7.5 Isotope mass balance of transition metals.....	176
7.6. Concluding remarks and future directions	177
BIBLIOGRAPHY	179
