Acknowledgements	iv
Abstract	v
Zusammenfassung	vii
1 Introduction	1
1.1 Short history of forest inventory	2
1.2 Thesis objective and structure	5
2 The <i>R</i> Package forestinventory: design-based global and small area estimations for multi-phase forest inventories	9
2.1 Introduction	11
2.2 Methods and structure of the package	13
2.3 Two-phase estimators and their application	17
2.4 Three-phase estimators and their application	28
2.5 Calculation of confidence intervals	34
2.6 Special cases and scenarios	35
2.7 Analysis and visualization	39
2.8 Future plans	42
3 Combining canopy height and tree species map information for large-scale timber volume estimations under strong heterogeneity of auxiliary data and variable sample plot sizes	43
3.1 Introduction	45
3.2 Materials and methods	47
3.3 Results	54
3.4 Discussion	61
3.5 Conclusion	64
4 A double-sampling extension of the German National Forest Inventory for design-based small area estimation on forest district levels	65
4.1 Introduction	67
4.2 Terrestrial sampling design of the German NFI	69
4.3 Double-sampling in the infinite population approach	69
4.4 Estimators	70
4.5 Case study	75
4.6 Results	82
4.7 Discussion	86
4.8 Conclusion	88
4.9 Appendix	89

5 Accuracy assessment of timber volume maps using forest inventory data and LiDAR canopy height models	90
5.1 Introduction	92
5.2 Materials and methods	94
5.3 Results	102
5.4 Discussion	107
5.5 Conclusion	108
6 Synthesis	110
6.1 Main findings	111
6.2 Limitations and criticisms	112
6.3 Conclusion and implications for future work	113
Bibliography	116
Curriculum Vitae	126
