Abstract	i
Chapter 1 Introduction	7
1.1 A short overview of GNSS positioning techniques	7
1.2 Motivation	9
1.3 Objectives and outline of this thesis	9
1.4 State of the art.....	10
Chapter 2 GNSS fundamentals	12
2.1 Mathematical model of GNSS positioning	12
Functional model.....	12
Stochastic model	15
2.2 Extended Kalman Filter for RTK GNSS positioning	16
EKF with static model.....	19
EKF with kinematic model	20
2.3 GNSS measurement errors	21
Satellite orbit and clock errors	21
Phase wind-up effects	23
2.4 Carrier-to-noise density ratio	24
Noise power density N_0	25
Received carrier power	25
Parameters affecting the measured C/N_0	26
C/N_0 as indicator of receiver measurement precision.....	27
The C/N_0 estimator in a GNSS receiver	28
2.5 Multipath	30
Multipath categories	30
Code multipath.....	31
Carrier-phase multipath	32
Spectral analysis of the multipath through C/N_0	34
Unique feature of multipath	40
Mitigate the multipath by sidereal stacking of the coordinates for a static station.....	44
Chapter 3 Single-frequency receivers and antennas	45
3.1 Zero baseline test of low-cost single frequency receivers and antennas	45

3.2	Receiver clock	48
	The effect of the receiver clock adjustment on positioning	53
3.3	Carrier-to-noise density ratio measurements	58
3.4	Receiver measurements precision	60
	Least square variance component estimation	63
	Results and analysis.....	66
Chapter 4	Empirical antenna C/N_0 pattern modelling using geostationary satellites	72
4.1	The motivation of using geostationary satellites	72
4.2	Methodology	74
4.3	Measuring campaign with the BeiDou C05 satellite	76
4.4	Measuring campaign with the SBAS 136 satellite	80
Chapter 5	Relative antenna phase center variation estimation of a low-cost single-frequency antenna	86
5.1	Antenna mean phase center and phase center variations	86
5.2	Current state.....	88
5.3	Data collection and processing strategy.....	88
5.4	Results.....	92
	Estimated relative antenna PCV with 1 session's data.....	92
	Investigation of the antenna PCV influence on daily static positioning.....	94
	Investigation of the antenna PCV influence on 2-hour static positioning	97
	Investigation of the antenna PCV influence on kinematic positioning	101
	Estimated relative antenna PCV with 4 sessions' data.....	101
	Investigation of the antenna PCV influence on RTK positioning.....	104
5.5	Conclusions.....	110
Chapter 6	C/N_0 - and elevation-based observation weighting model.....	112
6.1	Existing observation weighting approaches.....	112
6.2	Proposed mixed weighting function.....	115
6.3	Comparing different weighting approaches.....	117
6.4	Benefits of applying MWF in RTK positioning	120
Chapter 7	RTK positioning with Dual GNSS constellations	125
7.1	GPS+BeiDou	125
7.2	GPS+GLONASS	128
	The additional SD reference ambiguity term	128

	The inter-frequency biases.....	129
	GPS+GLONASS RTK.....	130
Chapter 8	Conclusions and Outlook.....	136
8.1	Conclusions.....	136
8.2	Outlook	137
Appendix A	Mathematical derivation of phase wind-up	139
Appendix B	Proof of the first and second derivative of carrier-phase multipath error over the phase shift in NLOS signal.	143
Appendix C	u-blox Evaluation kit to u-blox modules mapping list	145
Appendix D	CPGF linear combination jumps	146
Appendix E	Statistics of the DD code and carrier phase residuals in a zero baseline test with two u-blox M8P receiver modules and one Trimble Bullet III antenna.....	151
Appendix F	Plots of SD carrier-phase residuals for the RTK processing with and without the estimated rover antenna PCV corrections	153
Appendix G	From the X-Sense project to the low-cost RTK GNSS receiver prototype....	155
References.....		157
