

TABLE OF CONTENTS

Summary	i
Résumé	v
Introduction	1
CHAPTER 1 - Temporal and genetic link between incremental pluton assembly and pulsed porphyry Cu-Mo formation in accretionary orogens	9
Abstract	9
1. Introduction	10
2. Geologic setting	11
3. Analytical methods	11
4. Incremental pluton construction	12
5. Timing of mineralization	18
6. Assessing the sources of ore-forming magmas using hafnium and oxygen isotopes	18
7. Controlling factors of porphyry Cu-Mo(-Au) systems formation	19
8. Summary and conclusions	20
References	20
Appendix A: Analytical methods procedures	25
Appendix B: Supplementary Tables B.1-4	30
Appendix C: Zircon cathodoluminescence imaging and U-Pb, Hf and O isotope spot analysis	86
CHAPTER 2 - 30 m.y. of Cenozoic magmatism along the Tethyan margin during Arabia-Eurasia accretionary orogenesis (Meghri- Ordubad pluton, southernmost Lesser Caucasus)	127
Abstract	127
1. Introduction	128
2. Regional geotectonic setting of the Lesser Caucasus	129

3. Structural setting, geology and geochronology of the Meghri-Ordubad pluton	130
4. Analytical methods	135
5. Results	136
5.1. Whole-rock major and trace element geochemistry	136
5.2. Whole-rock radiogenic isotope geochemistry	142
6. Discussion	146
6.1. Isotopic constraints on the magmatic source	146
6.2. Partial melting models for each magmatic series	147
6.3. Magmatic differentiation series dominated by fractional crystallization	150
6.4. Summary of geochemical modeling	152
6.5. Linking the temporal evolution of the MOP to the regional geodynamic framework of the Arabia-Eurasia accretionary orogeny	153
6.5.1. Plate kinematics and regional stress regime	153
6.5.2 Meghri-Ordubad pluton multi-stage emplacement	155
7. Conclusions	158
References	159
Appendix A: Supplementary Tables A.1-3	169
Appendix B: Supplementary Tables B.1-3	173

CHAPTER 3 - Petrological characterization of subduction- and collision-related magmatism in the composite Meghri-Ordubad pluton, Lesser Caucasus (Tethyan Orogenic Belt)

Abstract	177
1. Introduction	178
2. Field observations and petrography	181
2.1 Middle Eocene intrusive series 1 (48.9 - 43.1 Ma)	181
2.2 Late Eocene - Middle Oligocene intrusive series 2 (37.8 - 28.1 Ma)	184
2.3 Late Oligocene - Early Miocene intrusive series 3 (26.6 - 21.2 Ma)	190
3. Analytical methods	192
4. Mineral chemistry	193
4.1 Olivine	193
4.2 Clinopyroxene	194
4.3 Plagioclase	195

4.4 Amphibole	197
4.5 Biotite	200
5. Sequence of crystallization for each magmatic series	200
6. Thermobarometry	202
6.1 Al-in-hornblende thermometry	202
6.2 Al-in-hornblende barometry	203
7. Discussion	206
7.1 Plagioclase textures and chemistry: an archive of magmatic processes	206
7.2 Significance and implications for variable ferromagnesian silicate mineral assemblages	207
7.2.1 Magmatic series 1	207
7.2.2 Magmatic series 2	209
7.2.3 Magmatic series 3	211
7.3 Summary of the magmatic plumbing system evolution in the MOP	212
7.3.1 Magmatic series 1	212
7.3.2 Magmatic series 2	213
7.3.3 Magmatic series 3	214
8. Concluding remarks	215
References	218
Appendix A: Supplementary Tables A.1-3	227
Appendix B: Supplementary Tables B.1-5	228
Electronic Appendix E.1-5 (see attached CD-ROM)	

CHAPTER 4 - Optimal tectonic, magmatic and hydrothermal conditions for the generation of large porphyry Cu-Mo systems in a collision zone: Insights from the Meghri-Ordubad pluton, southernmost Lesser Caucasus

Abstract	241
1. Introduction	242
2. Tectono-magmatic evolution along the Tethyan margin	244
2.1 Regional geodynamic evolution	244
2.2 Magmatism in the Zangezur-Ordubad region	245
3. Characteristics of porphyry Cu-Mo systems hosted in the MOP	250
3.1 Subduction-related porphyry Cu-Mo deposits	250

3.2 The major post-subduction Kadjaran porphyry-epithermal Cu-Mo system	253
3.2.1 Temporal framework and spatial distribution	253
3.2.2 Mineralization and hydrothermal alteration	255
4. Discussion	263
4.1 Regional geodynamic evolution and structural features in the MOP	263
4.2 Magmatic-hydrothermal cycles in the Meghri-Ordubad pluton	265
4.2.1 Temporal evolution and magmatic processes operating in the MOP	265
4.2.2 Major PCDs and high Sr/Y "adakite-like" magma systematics	267
4.2.3 Temporal and spatial evolution of the major Kadjaran Cu-Mo deposit	268
4.3 Source of Mo in porphyry Cu-Mo deposits	271
4.4 Post-subduction alkaline magmatism and the lack of Au endowment	275
5. Conclusions and perspectives	277
References	278
Appendix A: Supplementary Table A.1	292
Appendix B: Supplementary Tables B.1-2	296
 General conclusions	 303
Acknowledgements	304
