Acknowledgments	5
Abstract	9
Résumé	11
General introduction	17
<i>The paradox of sex: theoretical costs and benefits of sexual and asexual reproduction</i>	18
<i>The Timema genus: an ideal group to adress the paradox of sex</i>	22
<i>Thesis work: How I addressed the paradox of sex using Timema</i>	25
Chapter I - Evolutionary dynamics of specialization in herbivorous stick insects	31
Abstract.....	33
Introduction.....	34
Methods	39
<i>Realized feeding niches</i>	39
<i>Fundamental feeding niches</i>	39
<i>Phylogenetic analyses for evaluating trade-offs in host use</i>	40
<i>Estimations of the degree of specialization</i>	41
<i>Plant chemical profile characterization</i>	42
Results	44
<i>Insect performances on different plants</i>	44
<i>Phylogenetic trade-offs in host use</i>	46
<i>Degree of specialization</i>	46
<i>Effect of plant chemical composition on Timema performances</i>	49
Discussion	52
References	56
Supporting information	63
Chapter II - Fundamental and realized niche breadths in sexual and asexual stick insects	73
Abstract.....	75
Introduction.....	76
Methods	82
<i>Realized feeding niche breadths</i>	82
<i>Degree of color polymorphism</i>	82
<i>Fundamental feeding niche breadths</i>	83
Results	86
<i>Realized feeding niche breadths</i>	86
<i>Fundamental feeding niche breadths</i>	87
Discussion	91
References	95

Supporting information	98
Chapter III - Nematode endoparasites do not codiversify with their stick insect hosts	103
Abstract.....	105
Introduction.....	106
Methods	108
<i>Sample collection and molecular methods</i>	108
<i>Phylogenetic placement of the endoparasitic nematodes</i>	110
<i>Host-parasite co-phylogenetic analyses</i>	112
Results.....	116
<i>Phylogenetic placement of the endoparasitic nematodes</i>	116
<i>Host-parasite cophylogenetic analyses</i>	116
Discussion.....	122
References	128
Supporting information	136
Chapter IV - Evidence for the 'Parasite hypothesis for sex' in <i>Timema</i> stick insects	139
Abstract.....	141
Introduction.....	142
Methods	145
<i>Fungus identification</i>	145
<i>Effect of fungal infections on host immune response and fitness</i>	145
<i>Tests of fungal transmissions between <i>Timema</i> individuals</i>	147
<i>Frequency of fungal infections in natural sexual and asexual populations</i>	149
<i>Parasite prevalence in locations inhabited by sexuals and asexuals</i>	150
Results.....	151
<i>Fungal infections</i>	151
<i>Fungal transmissions between <i>Timema</i> individuals</i>	153
<i>Local adaptation between <i>Timema</i> and the fungal parasites</i>	153
<i>Fungal infections in natural populations</i>	154
<i>Parasite prevalence in locations inhabited by sexual and asexual populations</i>	155
Discussion.....	158
References	162
Supporting information	167
Chapter V - Testing for reproductive polymorphism in the <i>Timema poppensis</i>-<i>T. douglasi</i> complex	169
Abstract.....	171
Introduction.....	172
Methods	176
<i>Sex-ratios in natural populations</i>	176
<i>Hatching timing and success of eggs laid by virgin and mated females</i>	177

<i>Mating behavior</i>	179
Results.....	182
<i>Sex-ratios in natural populations</i>	182
<i>Hatching timing and success of eggs laid by virgin and mated females</i>	184
<i>No overall difference in mating behavior of virgin females between locations</i>	187
Discussion.....	188
Perspectives.....	193
References	195
Supporting information	198
General discussion	203
Main conclusions.....	205
Some unanswered questions and perspectives	211
References	214
Appendix	220
<i>Geographical distribution of the seven <i>Timema</i> host plants used in the feeding experiment</i>	220
Other contributions	221
Poster for conference Jacques Monod, Roscoff (2013)	222
Poster for conference ESEB (2017)	223
Curriculum vitae	224
