Abstract (English/Français)	v
	1
<b>I Introduction</b>	<b>1</b>
	5
<b>II Ingredients</b>	<b>5</b>
II.A Deterministic PDE-constrained Optimal Control Problems . . . . .	5
II.A.1 Notations and definitions for linear-quadratic OCP . . . . .	5
II.A.2 Existence and uniqueness results for OCPs . . . . .	6
II.A.3 Formulation with Lagrange multipliers . . . . .	7
II.A.4 Function spaces . . . . .	9
II.A.5 Dirichlet boundary conditions and interior control . . . . .	10
II.A.6 Neumann boundary conditions and boundary control . . . . .	11
II.A.7 Discrete concepts in PDE constrained optimization . . . . .	13
II.B Unconstrained optimization techniques . . . . .	14
II.B.1 Line search algorithm . . . . .	14
II.B.2 Steepest descent . . . . .	15
II.B.3 Quasi-Newton methods . . . . .	17
II.B.4 Newton's method . . . . .	18
II.B.5 Coordinate descent . . . . .	19
II.B.6 Conjugate gradient . . . . .	20
II.C Risk averse optimization . . . . .	22
II.C.1 Stochastic modeling . . . . .	22
II.C.2 Main ideas in risk averse optimization . . . . .	23
II.C.3 Coherent Risk Measure . . . . .	24
II.C.4 Example of risk measures . . . . .	25
II.C.5 Robust OCPs, incorporating a risk measure . . . . .	27
II.C.6 Existence result for robust OCPs under uncertainty . . . . .	28
II.D Machine Learning (ML) Optimization methods . . . . .	30
II.D.1 ML problem setting . . . . .	30

II.D.2 Learning stage . . . . .	31
II.D.3 Bias-Variance dilemma . . . . .	32
II.D.4 Examples of loss functions . . . . .	33
II.D.5 Link with the studied OCP . . . . .	34
II.D.6 The Full Gradient method . . . . .	35
II.D.7 The Stochastic Gradient method . . . . .	36
II.D.8 The Stochastic Averaged Gradient method . . . . .	37
II.D.9 SG with momentum . . . . .	38
II.D.10 SG with gradient averaging . . . . .	39
II.D.11 Iterate Averaging . . . . .	39
II.D.12 Hybrid Methods . . . . .	40
II.D.13 Incremental Aggregated Gradient . . . . .	40
II.E Goals of the Thesis . . . . .	41
II.F Outline of the thesis . . . . .	42
	<b>45</b>
<b>III Analysis of stochastic gradient methods for PDE-constrained OCPs with uncertain parameters</b>	<b>45</b>
III.A Introduction . . . . .	45
III.B Problem setting . . . . .	48
III.B.1 Optimal Control Problem . . . . .	51
III.C Finite Element approximation in physical space . . . . .	54
III.D Approximation in probability space . . . . .	58
III.D.1 Monte Carlo method . . . . .	58
III.E Steepest descent method for fully discrete problem . . . . .	60
III.F Stochastic Gradient with fixed mesh size . . . . .	64
III.G Stochastic Gradient with variable mesh size . . . . .	72
III.H Numerical results . . . . .	76
III.H.1 Reference solution . . . . .	77
III.H.2 Steepest descent algorithm with fixed discretization . . . . .	78
III.H.3 Stochastic Gradient with fixed mesh size $h$ . . . . .	80
III.H.4 Stochastic Gradient with decreasing mesh size $h_j$ . . . . .	82
III.I Conclusions . . . . .	84
III.J Appendix: Reference solution by Stochastic Collocation . . . . .	86
III.J.1 Optimal Control Problem with quadrature . . . . .	86
III.J.2 Collocation on tensor grid of Gaussian Legendre quadrature . . . . .	88
III.K Proof for increasing Monte Carlo sampling in SG . . . . .	91
	<b>93</b>

<b>IV Multilevel Stochastic Gradient method for PDE-constrained OCPs with uncertain parameters</b>	<b>93</b>
IV.A Introduction . . . . .	93
IV.B Problem setting . . . . .	95
IV.B.1 Finite Element approximation . . . . .	97
IV.B.2 Multilevel Monte Carlo (MLMC) estimator . . . . .	99
IV.C Multilevel Stochastic Gradient (MLSG) algorithm . . . . .	100
IV.C.1 Convergence analysis . . . . .	101
IV.C.2 Implementation of MLSG . . . . .	112
IV.D Randomized multilevel Stochastic Gradient algorithm . . . . .	112
IV.D.1 Convergence analysis . . . . .	114
IV.D.2 Implementation of the RMLSG algorithm . . . . .	123
IV.E Numerical results . . . . .	124
IV.E.1 Problem setting . . . . .	124
IV.E.2 Reference solution . . . . .	125
IV.E.3 MLSG algorithm . . . . .	125
IV.E.4 RMLSG algorithm . . . . .	126
IV.F Conclusions . . . . .	128
	<b>130</b>
<b>V PDE-constrained OCPs with uncertain parameters using SAGA</b>	<b>131</b>
V.A Introduction . . . . .	131
V.B Problem setting . . . . .	133
V.B.1 Existence and uniqueness result . . . . .	134
V.B.2 Finite Element approximation . . . . .	135
V.B.3 Collocation method . . . . .	136
V.C Review of Stochastic Approximation methods . . . . .	138
V.C.1 Stochastic Gradient (SG) . . . . .	138
V.C.2 Stochastic Average Gradient (SAG) . . . . .	139
V.C.3 SAGA . . . . .	140
V.D SA methods in the context of PDE-constrained OCP . . . . .	141
V.D.1 Convergence and complexity analysis of the modified SG Algorithm 6142 . . . . .	144
V.D.2 Convergence analysis of the modified SAGA Algorithm 7 . . . . .	144
V.D.3 Complexity analysis of SAGA . . . . .	150
V.E Numerical results . . . . .	152
V.E.1 Performance of SAGA and comparison with FG . . . . .	153
V.E.2 Complexity results for the SAGA algorithm . . . . .	155
V.F Conclusions . . . . .	160
	<b>162</b>
<b>Conclusions</b>	<b>162</b>
