Abstract (English/Français/Deutsch)	v
Acknowledgements	xi
List of figures	xvi
List of tables	xviii
Nomenclature	xix
List of symbols	xxi
Introduction	1
1 Introduction	1
1.1 Background	1
1.1.1 Additive manufacturing	1
1.1.2 Bioprinting	2
1.1.3 Biomaterials	6
1.1.4 Smart dispensing	6
1.1.5 Microfluidics	9
1.2 Research strategy	9
1.2.1 Problem definition	9
1.2.2 Research objective	10
1.2.3 Thesis structure	10
2 Cryogels	11
2.1 Introduction	11
2.2 Probe design and fabrication	12
2.2.1 Specifications	12
2.2.2 Microfabrication	13
2.2.3 Experimental validation	15
2.3 Cryogel Synthesis	17
2.4 Pore size tuning	21
2.4.1 Crystal growth and pores size	21
	xiii

2.4.2	Cryogel pores size modulation	22
2.5	Cryogel 3D printing	28
2.6	Collagen coating	30
2.7	Cell seeding	32
2.8	Conclusion	34
2.8.1	Summary	34
2.8.2	Discussion and outlook	35
3	Cell concentration	37
3.1	Introduction	37
3.2	Concentrators design	39
3.2.1	Specifications and design choice	39
3.2.2	Hydrodynamic focusing	41
3.2.3	Crossflow filter	48
3.2.4	Probe Final Design and Setup	60
3.3	Bioprinting at high cell concentrations	62
3.3.1	Materials and methods	62
3.3.2	Results	63
3.4	Bladder organoid bioprinting	65
3.4.1	Motivation	65
3.4.2	Protocol	66
3.4.3	Results	68
3.5	Conclusion	75
3.5.1	Summary	75
3.5.2	Discussion and outlook	76
4	Biomaterials 3D printing	79
4.1	Introduction	79
4.2	Improving structural stability	80
4.2.1	Bio-ink modification	80
4.2.2	Co-extrusion printing	82
4.2.3	Liquid printing	86
4.3	Conclusion	88
4.3.1	Summary	88
4.3.2	Discussion and outlook	88
5	Conclusion and outlook	91
5.1	Summary of results	91
5.2	Conclusion	92
5.3	Future applications of the technology	93
6	List of publications	95

A	Exploited technologies	97
A.1	Polyimide-SUS	97
A.2	Silicon	98
A.3	3D printing	99
B	Cryogel synthesis calculus	101
B.1	Introduction and definition of aims	101
B.2	Protocol	101
C	Collagen coating of cryogels	107
C.1	Introduction and definition of aims	107
C.2	Quantification of adsorption of collagen to cryogels	108
C.3	Surface versus Volume localization	110
C.4	Fibril formation and homogeneity	114
C.5	Permanent modification	115
C.6	Conclusion	119
D	Thermodynamic model	121
E	Conductive cryogels	125
E.1	Introduction	125
E.2	Implementation and results	125
E.3	Conclusion	127
F	Calculation steps for hydrodynamic focusing design	129
G	Organoids culture and protocol	131
G.1	Material	131
G.2	Media	131
G.3	Organoid fixing and staining	132
G.3.1	Protocol	132
G.3.2	Material	133
H	Multi-material printing	135
H.1	Intoduction	135
H.2	Implementation and results	135
H.3	Conclusion	136
I	Microfluidic for 3D printing	137
I.1	Introduction	137
I.2	Probes	137
I.2.1	Multi-Material probe	137
I.2.2	Mixing probe	139
I.2.3	Adjustable resolution probe	140

Contents

1.2.4	Concentration probe	142
1.3	Discussion and conclusion	142
	Bibliography	166
