<b>Abstract (English/Français/Português)</b>	<b>vii</b>
<b>List of symbols</b>	<b>xvii</b>
<b>List of figures</b>	<b>xix</b>
<b>List of tables</b>	<b>xxii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Background and motivation . . . . .	1
1.2 Research objectives . . . . .	2
1.3 Structure of the report . . . . .	3
<b>2 State of the art</b>	<b>5</b>
2.1 Driftwood and large wood: definitions . . . . .	5
2.2 What can happen if large wood moves into reservoirs? . . . . .	6
2.2.1 Spillway blockage in Palagnedra dam, Switzerland . . . . .	6
2.2.2 Bridge blockage in Ichinomiya, Japan . . . . .	8
2.2.3 Spillway blockage in Sa Teula dam, Italy . . . . .	8
2.2.4 Spillway blockage in Yazagyo dam, Myanmar . . . . .	9
2.3 Origin and behaviour of large wood inside streams . . . . .	10
2.4 Influence of large wood density . . . . .	11
2.5 Estimation of large wood volume . . . . .	12
2.6 Blockage of large wood at hydraulic structures . . . . .	13
2.7 Hydraulic modeling of large wood: physical models . . . . .	16
2.8 Hydraulic modeling of large wood: numerical modeling . . . . .	16
2.9 Influence of experimental number of repetitions in large wood studies . . . . .	17
2.10 Research needs . . . . .	19
<b>3 Materials and methods</b>	<b>21</b>
3.1 Overview . . . . .	21
3.2 Dimensional analysis . . . . .	21
3.3 Experimental facility . . . . .	23

3.3.1	Experimental set-up	23
3.3.2	Artificial stems	25
3.3.3	Scale effects	27
3.3.4	Model effects	28
3.3.5	Instrumentation	32
3.4	Methodology of experimentation	32
3.4.1	Varied parameters	33
<b>4</b>	<b>Influence of experimental repetitions on the accuracy of blocking probability for individual stems</b>	<b>37</b>
4.1	Overview	37
4.2	Methodology	37
4.2.1	Statistical analysis	39
4.3	Results and discussion	41
4.4	Conclusions	46
<b>5</b>	<b>Estimation of blocking probability for individual stems</b>	<b>47</b>
5.1	Overview	47
5.2	Methodology	47
5.2.1	Statistical analysis	49
5.3	Results and discussion	50
5.3.1	Estimation of blocking probability for individual stems, class A	50
5.3.2	Estimation of blocking probability for individual stems, class C	54
5.3.3	Estimation of blocking probability for individual stems, class E	55
5.3.4	Influence of the relative stem length on blocking probability of individual stems	60
5.4	Conclusions	61
<b>6</b>	<b>Influence of experimental repetitions on the accuracy of blocking probability for groups of stems</b>	<b>63</b>
6.1	Overview	63
6.2	Methodology	63
6.2.1	Statistical analysis: subsampling bootstrap technique	64
6.3	Results and discussion	65
6.4	Conclusions	71
<b>7</b>	<b>Estimation of blocking probability for groups of stems</b>	<b>73</b>
7.1	Overview	73
7.2	Methodology	73
7.3	Results and discussion	75
7.3.1	Estimation of blocking probability for groups of stems, class A	75
7.3.2	Estimation of blocking probability for groups of stems, class C	75
7.3.3	Estimation of blocking probability for groups of stems, class E	78

7.4	Conclusions	79
<b>8</b>	<b>Head increase due to stem blockage</b>	<b>81</b>
8.1	Overview	81
8.2	Blocking probability and head measurements	81
8.2.1	Methodology	81
8.2.2	Results and analysis	83
8.3	Head increase due to artificially blocked stems	92
8.3.1	Methodology	92
8.3.2	Results and analysis	94
8.4	Discussion	99
8.5	Conclusions	101
<b>9</b>	<b>Conclusions</b>	<b>103</b>
9.1	Main conclusions	103
9.2	Practical recommendations	105
9.3	Outlook	106
<b>A</b>	<b>Measurements of flow velocity for evaluation of baffle design.</b>	<b>119</b>
<b>B</b>	<b>Supplementary measurements of head increase due to artificially blocked stems.</b>	<b>123</b>
<b>C</b>	<b>Full set of experiments conducted for estimations of blocking probability.</b>	<b>129</b>
	<b>Curriculum Vitae</b>	<b>133</b>
