

Table of Contents

Abstract	IV
Abstract	VI
List of Abbreviations	IX
Chapter 1 Introduction	1
1.1 Iridium in catalysis	2
1.1.1 Precedents for asymmetric iridium catalyzed reactions	4
1.1.2 Iridium-catalyzed C–H functionalizations	8
1.2 Precedents for chiral Cp ^x ligands and Cp ^x M complexes	10
1.2.1 Cp ligands and their general properties	10
1.2.2 Conceptual design of chiral Cp ^x ligands	12
1.2.3 Historic milestones of chiral Cp ^x ligands used in homogeneous asymmetric catalysis	13
1.2.4 The development of modifiable chiral Cp ^x ligands used in asymmetric C–H functionalization reactions	15
1.2.5 Further chiral Cp ^x ligands for C–H functionalization	20
1.2.6 Chiral Cp ^x Ir(III) complexes and their application in asymmetric catalysis	24
1.3 Heteroatom stereocenters and different types of chirality.....	26
1.3.1 <i>P</i> -chiral and axially chiral phosphorus compounds relevant in asymmetric catalysis	28
1.3.2 Relevance of <i>S</i> -chiral compounds	31
1.4 Cp ^x Ir-catalyzed C–H functionalization of phosphine oxides	32
1.5 Aims of the thesis	36
Chapter 2 Enantioselective Iridium(III)-Catalyzed C–H Amidation to Access <i>P</i>-Chiral Compounds	39
2.1 Synthetic approach to <i>P</i> -chiral compounds	40
2.1.1 Catalytic enantioselective C–H amidation with Cp ^x Ir complexes to efficiently access <i>P</i> -chiral organophosphorus compounds	44
2.1.2 Optimization of conditions for the enantioselective C–H amidation of phosphine oxides	46
2.1.3 Investigation of the cooperative effect between Cp ^x Ir and chiral carboxylic acids.....	49
2.1.4 Scope of the enantioselective C–H amidation of phosphorus(V) compounds	51
2.1.5 Transformations of chiral amidated phosphine oxides	56
2.1.6 Concluding remarks concerning enantioselective Cp ^x M(III)-catalyzed C–H functionalization with chiral acids	57
Chapter 3 Asymmetric Iridium(III)-Catalyzed C–H Arylation of Phosphine Oxides	61

3.1 Catalytic approaches via C–H functionalization towards atropisomers	62
3.2 Properties and synthesis of quinone diazides	63
3.3 Asymmetric Cp ^X Ir-catalyzed C–H arylation of phosphine oxides with quinone diazides	64
3.3.1 Optimization of the conditions for the enantioselective C–H arylation of phosphine oxides	66
3.3.2 Scope of the C–H arylation of prochiral phosphine oxides.....	68
3.3.3 Scope of the C–H arylation to obtain axially and <i>P</i> -chiral diastereomeric phosphine oxides	72
3.3.4 Scope of the atropo-enantioselective C–H arylation of phosphine oxides.....	75
3.3.5 Transformations of chiral phosphine oxides toward chiral phosphines	79
Chapter 4 Preliminary Results of Iridium(III)-Catalyzed C–H Amidation Reactions	81
4.1 Cp ^X Ir-catalyzed C–H amidation of sulfoximines to obtain <i>S</i> -chiral products	82
4.1.1 Optimization studies for the Cp ^X Ir-catalyzed enantioselective C–H amidation of sulfoximines	84
4.1.2 Optimization of the conditions for the sulfoximine-directed asymmetric C–H amidation conducted in HFIP as the solvent.....	88
4.2 Ketoxime directed C(sp ³)–H amidation of unactivated methyl groups	89
4.2.1 Introduction to catalytic enantioselective C(sp ³)–H amidation.....	89
4.2.2 Preliminary results of the enantioselective Cp ^X Ir-catalyzed C(sp ³)–H amidation.....	91
Chapter 5 Summary	97
Chapter 6 Outlook	103
Chapter 7 Experimental Part	107
7.1 General methods	108
7.2 Synthesis of reagents	108
7.3 Enantioselective Cp ^X Ir(III)-catalyzed C–H amidation of phosphine oxides	126
7.4 Asymmetric Cp ^X Ir(III)-catalyzed C–H arylation of phosphine oxides.....	170
7.5 Enantioselective Cp ^X Ir-catalyzed C(sp ²)–H amidation of sulfoximines	252
7.6 Cp ^X Ir-catalyzed ketoxime-directed C(sp ³)–H amidation of methyl groups.....	254
Chapter 8 Bibliography.....	257
Publication List	265
Curriculum Vitae	267
Chapter 9 Appendix	269
