<b>Abstract</b>	<b>vii</b>
<b>Zusammenfassung (German abstract)</b>	<b>ix</b>
<b>List of figures</b>	<b>xiii</b>
<b>List of tables</b>	<b>xvi</b>
<b>Introduction</b>	<b>1</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Motivation	1
1.1.1 What is the nature of the cortical neural code?	1
1.1.2 How does cortical neural variability emerge?	3
1.1.3 Predicting emergent cortical network dynamics requires detailed modeling	5
1.2 Outline of the thesis	7
1.3 A detailed neocortical microcircuit model	9
1.3.1 Reconstruction and simulation of a neocortical microcircuit	9
1.3.2 Reproducing in vivo-like cortical dynamics	14
<b>2 Reliability amid noise and chaos</b>	<b>19</b>
2.1 Introduction	20
2.2 Results	22
2.2.1 Rapid divergence of spontaneous activity	22
2.2.2 Variability is robust across dynamical states	25
2.2.3 Variability is nearly saturated at the scale of the microcircuit	27
2.2.4 Highly connected neurons diverge faster	27
2.2.5 Noise amplified by chaos determines internally generated variability	29
2.2.6 Synaptic noise dominates variability	30
2.2.7 Ion-channel noise in irregular firing neurons is overshadowed by synaptic noise	32
2.2.8 Synaptic noise acts as a threshold for other noise sources	32
2.2.9 Rapid divergence of evoked, reliable activity	33

2.2.10 Evoked reliable activity amid noise and chaos . . . . .	35
2.2.11 Spike-timing reliability . . . . .	35
2.2.12 High reliability requires recurrent cortical connectivity . . . . .	37
2.2.13 High reliability emerges near a critical EI-balance . . . . .	39
2.3 Discussion . . . . .	41
2.3.1 Potential effects of missing biological detail . . . . .	43
2.3.2 Concluding remarks . . . . .	44
2.4 Methods . . . . .	45
2.4.1 Simulation . . . . .	45
2.4.2 Analysis . . . . .	49
2.5 Supplementary figures . . . . .	52
<b>3 Cliques of neurons bound into cavities</b>	<b>69</b>
3.1 Introduction . . . . .	70
3.2 Results . . . . .	73
3.2.1 The case for directed simplices . . . . .	73
3.2.2 An abundance of directed simplices . . . . .	73
3.2.3 Topology organizes spike correlations . . . . .	77
3.2.4 Cliques of neurons bound into cavities . . . . .	79
3.2.5 Cliques and cavities in active sub-graphs . . . . .	80
3.3 Discussion . . . . .	84
3.4 Materials and methods . . . . .	86
3.4.1 The topological toolbox . . . . .	86
3.4.2 Computation of simplices and homology . . . . .	90
3.4.3 Model of neocortical microcircuitry . . . . .	91
3.4.4 Control networks . . . . .	91
3.4.5 Patch clamp experiments . . . . .	92
3.4.6 C. elegans connectome . . . . .	92
3.4.7 Simulation of electrical activity . . . . .	93
3.4.8 Spike train correlations . . . . .	93
3.4.9 Transmission-response matrices . . . . .	93
3.4.10 Data analysis and statistical tests . . . . .	94
3.5 Supplementary figures . . . . .	96
<b>4 Impact of higher-order network structure</b>	<b>105</b>
4.1 Introduction . . . . .	106
4.2 Results . . . . .	107
4.2.1 Reducing higher-order network structure . . . . .	107
4.2.2 Decreased heterogeneity of degree-distributions in cloud-model . . . . .	110
4.2.3 Fewer directed simplices and decreased small-worldness in cloud-model . . . . .	112
4.2.4 Simulating neuronal activity in NMC- and cloud-models . . . . .	113
4.3 Discussion . . . . .	119
4.4 Methods . . . . .	121

4.4.1 Circuit models . . . . .	121
4.4.2 Simulation . . . . .	123
4.4.3 Analysis . . . . .	124
4.5 Supplementary figures . . . . .	128
<b>5 Conclusion</b>	<b>137</b>
5.1 Summary of main conclusions . . . . .	137
5.2 Future directions . . . . .	139
5.2.1 Dendritic non-linearities . . . . .	140
5.2.2 Structural and functional plasticity . . . . .	141
5.2.3 Whole-brain integration . . . . .	141
5.3 Concluding remarks . . . . .	142
<b>A Appendix: Cliques of neurons bound into cavities</b>	<b>143</b>
A.1 Supplementary methods . . . . .	143
A.1.1 Proof: Maximal directionality of directed simplices . . . . .	143
A.1.2 Generation of directed flag complexes . . . . .	145
A.1.3 In vitro slice experiments . . . . .	149
A.1.4 Optimization of the parameters for the transmission-response matrices . . . . .	151
