Abstract iii

I Introduction **1**

I.1 Introduction 1

I.1.1 Birch and Swinnerton–Dyer conjecture for elliptic curves 1

I.1.2 Anti-cyclotomic main conjecture of Perrin-Riou . . 3

I.1.3 Euler systems 3

I.1.4 From classical Heegner points towards a general construction 5

I.2 Main results of the thesis 8

I.2.1 Previous work 8

I.2.2 The Hecke side 8

I.2.3 The Gan–Gross–Prasad setting 13

I.2.4 Main theorems on distribution 15

I.3 Applications 17

I.3.1 Universal norms for Conjugate-Dual Galois Representations of Gal_K 17
I.3.2 Arithmetic applications via split Kolyvagin systems . 21

II Preliminaries **23**
II.1 Generalities on reductive groups: absolute case 24
II.1.1 Algebraic groups 24
II.1.2 Tori 25
II.1.3 Digression on tori $\mathrm{Res}_{A/B}\,\mathrm{G}_{m,A}$ 26
II.1.4 Characters and cocharacters 31
II.1.5 Decomposing reductive groups 32
II.1.6 Weyl group I 33
II.1.7 Root datum 34
II.1.8 Positive and simple roots 37
II.1.9 Weyl groups II 39
II.1.10 Borel subgroups 40
II.1.11 Classification in the absolute case 41
II.1.12 The connected Langlands group 42
II.2 Structure of reductive groups: relative case 43
II.2.1 k-tori in $\mathbf{G}$ 43
II.2.2 Relative root system 44
II.2.3 Relative root datum 47
II.2.4 Relative Weyl group 47
II.2.5 The relative root group $\mathbf{U}_\alpha$ 48
II.2.6 Parabolic subgroups 50
II.2.7 Tits system 51

II.3 Bruhat–Tits buildings theory 54
II.3.1 Notations 55
II.3.2 The standard apartment 56
II.3.3 A discrete valuation of the generating root datum . . 61
II.3.4 Affine roots 66
II.3.5 Affine Weyl groups 70
II.3.6 The reduced Bruhat–Tits building 72
II.3.7 The extended Bruhat–Tits building 74
II.3.8 The extended affine Weyl group 77
II.3.9 Parahoric subgroups 78

III The Ring $\mathbb{U}$ and Hecke Algebras **89**
III.1 A Tits system 91
III.2 Iwahori–Weyl group 92
III.3 Double cosets 94
III.4 Dominance in Λ_M 96
III.5 Relative Hecke algebras 99
III.6 Special–Hecke and Iwahori–Hecke algebras 106
III.7 Iwahori decompositions 109
III.8 The module $\mathcal{M}_I(\mathbb{Z})$ 117
III.9 Decomposition of $\mathcal{H}_I(R)$ and the untwisted Bernstein map 128
III.10 Untwisted Satake isomorphism 132
III.11 The center of the Iwahori–Hecke algebra 144
III.12 Compatibility of the untwisted Satake and untwisted Bernstein isomorphisms 149
III.13 The ring of $\mathbb{U}$-operators 151

III.14 A $\mathbb{U}$-structure on $\mathbb{Z}[G/K]$ 152
III.14.1 Section 153
III.14.2 Pairing 154
III.14.3 Integrality 158
III.14.4 Example $\mathbf{GL}_2$ 159
III.15 $\widetilde{\mathbb{U}}$-operators for $\widetilde{K}$ aka Geometric $\mathbb{U}$-operators 161
III.15.1 Digression on G^1-stabilizers 161
III.15.2 Averaging homomorphisms 163
III.15.3 Geometric untwisted homomorphisms 166
III.15.4 Compatibility 170
III.15.5 Geometric $\widetilde{\mathbb{U}}$-operators 171

IV Seed relations and Hecke polynomials **173**
IV.1 Langlands dual group 175
IV.2 Unramified representations and unramified L-parameters . 176
IV.3 The Hecke polynomial 178
IV.4 Explicit untwisted Satake transform 180
IV.5 Seed relations and $\mathbb{U}$-operators 181
IV.6 Bültel's annihilation relation 187

V Geometric realization of $\mathbb{U}$ **193**
V.1 Retractions and $\mathcal{U}$-operators 195
V.1.1 Preliminaries 195
V.1.2 Iwahori subgroups and retractions 196
V.1.3 Geometric $\mathbb{U}$-operators 199
V.2 Filtrations and $\mathcal{U}$-operators 206

V.2.1 Definition 206
V.2.2 Formula 208
V.2.3 Comparison with $\mathcal{U}$ 209
V.3 Norm-compatible families of vertices 213
V.3.1 Families of trees 213
V.3.2 Norm-compatible systems of vertices 219

VI Unitary Shimura Varieties and Special Cycles **223**
VI.1 Notations 224
VI.2 The groups 225
VI.3 The Deligne torus and variant 227
VI.4 The Hermitian symmetric domains 229
VI.5 The reflex field 233
VI.6 Reflex norm maps 237
VI.7 The Shimura varieties 237
VI.8 The projective system and Hecke action 242
VI.9 Deligne's Reciprocity law for tori 243
VI.9.1 Artin map 243
VI.9.2 The cases $\mathbf{T}$ and $\mathbf{Z}$ 244
VI.10 Galois action on connected components 247
VI.11 Morphisms of Shimura varieties 248
VI.12 The set of special cycles $\mathcal{Z}_{\mathbf{G},K}(\mathbf{H})$ 249
VI.13 Fields of definition of cycles in $\mathcal{Z}_{\mathbf{G},K}(\mathbf{H})$ 251
VI.14 Transfer fields and reciprocity law 252
VI.14.1 The kernel of the Verlagerung map 252
VI.14.2 The kernel of the reciprocity map 254

VI.14.3 Transfer fields of definition 255
VI.15 Galois action via $\mathbf{H}(\mathbb{A}_f)$ 258
VI.16 Hecke action on $\mathcal{Z}_{\mathbf{G},K}(\mathbf{H})$ 259

VII Distribution Relations **261**
VII.1 Main theorems on distribution relations 262
VII.1.1 Notations 262
VII.1.2 Compact subgroups and base cycles 263
VII.1.3 The field $\mathcal{K}$ 266
VII.1.4 Ramification in transfer fields extensions 268
VII.1.5 Ramification in $\mathcal{K}$-transfer fields extensions 269
VII.1.6 Interlude on orders 271
VII.1.7 Galois groups 274
VII.1.8 Global to local Galois/Hecke action on cycles . . . 276
VII.1.9 Main theorems on distribution 277
VII.2 Proof of local distribution relations in the split case 278
VII.2.1 Normalization isomorphism in the split case 278
VII.2.2 Action of Frobenii on unramified special cycles . . . 281
VII.2.3 The Hecke polynomial for split places 281
VII.2.4 Split local setting 290
VII.2.5 Local horizontal relation 299
VII.3 Split distribution relations 307
VII.3.1 Definition of the the norm-compatible system 307
VII.3.2 Proof of Theorem VII.2 308

Nomenclature **311**

Bibliography **334**
