

# Table of contents

Résumé	.....	III
Chapter 1	<b>General introduction</b> .....	9
Chapter 2	<b>How can we measure the crown and branch architecture damages on the chestnut tree?</b> .....	37
2.1	Assessing the impact of <i>Dryocosmus kuriphilus</i> on the chestnut tree: branch architecture matters .....	39
2.2	Evaluating <i>Dryocosmus kuriphilus</i> -induced damage on <i>Castanea sativa</i> .....	63
Chapter 3	<b>How can we measure the <i>Dryocosmus kuriphilus</i> and <i>Torymus sinensis</i> population dynamics?</b> .....	87
3.1	Adapting sampling effort to assess the population establishment of <i>Torymus sinensis</i> , the biocontrol agent of the chestnut gallwasp .....	89
Chapter 4	<b>How did the system <i>Castanea sativa</i>-<i>Dryocosmus kuriphilus</i>-<i>Torymus sinensis</i> evolve in southern Switzerland from the arrival of the pest?</b> .....	111
4.1	<i>Torymus sinensis</i> local and regional early population dynamics in the Insubrian and Piedmont regions. ....	113
4.2	Chestnut tree damage evolution due to <i>Dryocosmus kuriphilus</i> attacks .....	135
Chapter 5	<b>What are the far-reaching effects of the damage caused by <i>D. kuriphilus</i>?</b> .....	153
5.1	Impact of the Asian Chestnut Gall Wasp, <i>Dryocosmus kuriphilus</i> (Hymenoptera, Cynipidae), on the chestnut component of honey in the southern Swiss Alps .....	155
Chapter 6	<b>General discussion and conclusions</b> .....	177
Curriculum vitae	.....	191
