

# Contents

## Chapter 1 – Introduction

1.1.	The Nubian Sandstone Aquifer System - overview and current challenges .....	1
1.2.	The functioning of the NSAS – an historical review of research developments .....	2
1.3.	Why Northern Chad? .....	5
1.4.	Main questions specific to Northern Chad’s NSAS extent .....	7
1.4.1.	Aim of this study.....	7
1.4.2.	Geology and groundwater .....	7
1.4.3.	Stratigraphy and groundwater .....	8
1.4.4.	Hydraulic heads distribution .....	8
1.4.5.	Dynamics of recharge zones .....	9
1.4.6.	Dynamics of discharge zones .....	9
1.4.7.	Large scale organization of the groundwater system .....	10
1.5.	Structure of the thesis .....	10

## Chapter 2 – Review of the geology of the Kufra basin of Northern Chad

2.1.	Introduction.....	13
2.1.1.	Introduction and aim.....	13
2.1.2.	Note of terminology .....	13
2.1.3.	Outline of the chapter.....	14
2.2.	Area of investigation.....	14
2.2.1.	Boundaries of the Kufra basin .....	14
2.2.2.	Geological phases of the Kufra basin.....	15
2.2.2.1.	The Precambrian .....	16
2.2.2.2.	The Lower Paleozoic (Cambrian to Silurian).....	17
2.2.2.3.	The Upper Paleozoic (Devonian to Carboniferous).....	18
2.2.2.4.	The Mesozoic .....	18
2.2.2.5.	The Cenozoic .....	18

2.3. Methods.....	19
2.3.1. Fieldwork.....	19
2.3.2. Data used in the chapter.....	20
2.4. Results.....	20
2.4.1. The sedimentary sequence of the Kufra basin of Northern Chad.....	20
2.4.1.1. The Lower Paleozoic (Cambrian to Silurian).....	21
2.4.1.2. The Upper Paleozoic (Devonian to Carboniferous).....	23
2.4.1.3. The Mesozoic sequence.....	23
2.4.1.4. Tertiary and Quaternary deposits.....	24
2.4.2. Basement structure.....	26
2.4.3. Structural directions.....	28
2.5. Discussion.....	31
2.5.1. Identification of major structural phases.....	31
2.5.2. Tectonic accidents and role of hydrogeology.....	33
2.6. Concluding remarks.....	34

### Chapter 3 – Mineralogical and textural analysis of the sedimentary sequence of the Kufra basin of Northern Chad

3.1. Introduction and content of the chapter.....	35
3.1.1. Introduction.....	35
3.1.2. Content of the chapter.....	35
3.2. Rock sampling and analysis.....	36
3.2.1. Sampling.....	36
3.2.2. Mineralogical and textural analysis.....	36
3.2.3. Geochemical analysis.....	36
3.3. Results.....	37
3.3.1. Mineralogical observations of the sedimentary sequence.....	37
3.3.1.1. The Lower Paleozoic (Cambrian to Silurian).....	37
3.3.1.2. The Upper Paleozoic (Devonian to Carboniferous).....	37
3.3.1.3. The Mesozoic sequence.....	39
3.3.1.4. Tertiary and Quaternary deposits.....	41
3.3.2. Porosity estimation.....	41
3.3.3. Geochemical composition.....	43

3.4. Discussion.....	45
3.4.1. Thickness of the sedimentary sequence of the Kufra basin of Northern Chad.....	45
3.4.2. Ranges of hydraulic conductivities and role of fractures.....	45
3.4.3. Implications to the aquifer's configuration.....	46
3.5. Concluding remarks.....	48

### Chapter 4 – Hydrology and hydrogeology of the Tibesti Mountains and the Kufra basin of Northern Chad

4.1. Introduction.....	49
4.1.1. Introduction and aim.....	49
4.1.2. Outline of the chapter.....	50
4.1.3. Wadi Hydrology.....	50
4.1.4. Paleoclimatic changes.....	51
4.2. Morphological and hydrological setting.....	52
4.3. Methods.....	54
4.3.1. Fieldwork measurements and verification.....	54
4.3.2. Data used in the chapter.....	54
4.4. Results.....	55
4.4.1. The Tibesti Mountains.....	55
4.4.2. The Ennedi Mountains.....	56
4.4.2.1. General observations.....	56
4.4.2.2. Litho-hydrostratigraphic units.....	58
4.4.2.3. Groundwater flow patterns.....	59
4.4.3. The central lowlands.....	62
4.4.3.1. General observations.....	62
4.4.3.2. Litho-hydrostratigraphic units.....	64
4.4.3.3. Groundwater flow patterns.....	66
4.5. Discussion.....	68
4.5.1. Hydraulic heads distribution: modern and paleorecharge.....	68
4.5.2. Influence of modern recharge.....	69
4.6. Concluding remarks.....	70

## Chapter 5 – Rainfall and surface water dynamics

5.1. Introduction and outline of the chapter.....	71
5.1.1. Introduction and aim.....	71
5.1.2. Content of the chapter.....	72
5.2. Climatic and hydrological context.....	72
5.2.1. Characteristics of the studied area.....	72
5.2.2. Historical meteorological data.....	73
5.2.3. Conditions for recharge and wadi flow.....	74
5.3. Data processing and analysis.....	74
5.3.1. Precipitation data.....	74
5.3.2. Surface water dynamics.....	76
5.3.2.1. Choice of LandSat8OLI: time and area covered by the analysis.....	76
5.3.2.2. Processing of LandSat8 images for surface water determination.....	76
5.4. Results.....	78
5.4.1. Annual rainfall patterns and geographical distribution.....	78
5.4.1.1. The Mountainous Tibesti.....	78
5.4.1.2. The Ennedi Mountains.....	79
5.4.1.3. The central lowlands.....	80
5.4.1.4. Synthesis of annual rainfall distribution.....	82
5.4.2. Hydrological dynamics in response to rainfall.....	84
5.4.2.1. Identification of surface water areas.....	84
5.4.2.2. Regional variability and yearly amplitude.....	85
5.4.2.3. Local hydrological responses and dynamics.....	89
5.5. Synthesis of observations.....	99
5.6. Concluding remarks.....	100

## Chapter 6 – Potential and actual evapotranspiration

6.1. Introduction and outline of the chapter.....	101
6.1.1. Introduction and aim.....	101
6.1.2. Content of the chapter.....	102
6.2. Fundamentals of evaporation.....	103

6.3. Methods.....	106
6.3.1. Climatic data.....	106
6.3.2. Determination of daily net radiation.....	107
6.3.2.1. Extraterrestrial solar irradiance.....	107
6.3.2.2. Incoming shortwave solar radiation.....	107
6.3.2.3. Net longwave radiation.....	108
6.3.3. Potential evapotranspiration (Turc, Hargreaves, Penman).....	108
6.3.4. Estimation of actual evapotranspiration from LandSat8.....	110
6.3.4.1. General considerations.....	110
6.3.4.2. Principles of the method.....	111
6.3.4.3. Determination of surface albedo.....	111
6.3.4.4. Determination of surface temperature.....	112
6.3.4.5. Evaporative fraction.....	113
6.4. Results.....	114
6.4.1. Net radiation and potential evapotranspiration.....	114
6.4.2. Actual evapotranspiration.....	116
6.4.2.1. Potential and actual evapotranspiration.....	116
6.4.2.2. Regional distribution of actual ET.....	118
6.4.2.3. Distribution of ET in the eastern zone resulting from precipitation.....	120
6.4.2.4. Distribution of ET in the main discharge zones.....	129
6.4.3. Synthesis of losses through evapotranspiration.....	137
6.5. Discussion.....	139
6.5.1. Evapotranspiration rates from literature.....	139
6.5.2. Main findings.....	140
6.5.3. Critical review and further improvements.....	141
6.6. Concluding remarks.....	142

## Chapter 7 – Hydrochemistry and stable isotopes

7.1. Introduction and outline of the chapter.....	143
7.2. Review of the use of stable isotopes, dating and geochemistry.....	144
7.2.1. Isotopic signature of Northern African groundwater and global/continental processes.....	144
7.2.2. Groundwater age and origin in the Kufra basin.....	144
7.2.3. Chemical signature of the NSAS's groundwater.....	145

7.3. Methods.....	146
7.3.1. Sampling campaigns.....	146
7.3.2. Laboratory analysis and data treatment.....	147
7.3.2.1. Major Ions.....	147
7.3.2.2. Stable Isotopes.....	147
7.3.3. Additional data used in the chapter.....	148
7.3.3.1. Applicable to the whole region.....	148
7.3.3.2. Specific to the Tibesti Mountains.....	148
7.3.3.3. Specific to the Nubian Sandstone Aquifer System.....	148
7.4. Results.....	149
7.4.1. Groundwater of the Tibesti Mountains.....	149
7.4.1.1. Stable isotopic signature.....	149
7.4.1.2. Chemical species distribution.....	151
7.4.2. Groundwater of the Nubian Sandstone Aquifer System.....	154
7.4.2.1. Stable isotopic signature.....	154
7.4.2.2. Multisampling and variability of the isotopic signature.....	156
7.4.2.3. Stable isotopic signature, water heads and rainfall rates.....	157
7.4.2.4. Physical parameters, hydrochemical signatures and stable isotopes.....	161
7.4.2.5. Groundwater conceptual flow model.....	162
7.5. Discussion.....	168
7.5.1. The Tibesti Mountains.....	168
7.5.1.1. Stable isotopic signature.....	168
7.5.1.2. Chemical signature.....	169
7.5.2. The Nubian Sandstone Aquifer System of Northern Chad.....	169
7.5.2.1. Stable isotopes and hydrochemical signature in the Ennedi Mountains.....	169
7.5.2.2. Stable isotopes and hydrochemical signature in the central lowlands.....	170
7.5.2.3. Chemical signature of the NSAS of Northern Chad.....	171
7.6. Conclusions.....	173

## Chapter 8 – Synthesis of the results and conceptual groundwater model

8.1. Content of the chapter.....	175
8.2. Hydrogeology of the NSAS of Northern Chad.....	175
8.3. Climatic and hydrological dynamics of the NSAS of Northern Chad.....	180

8.4. Conceptual hydrogeological model.....	184
8.4.1. Groundwater flow organization in the Ennedi Mountains.....	184
8.4.2. Groundwater flow organization in the central lowlands.....	186
8.5. Concluding remarks.....	188

Future lines of work.....	189
Bibliography.....	191

## Appendices

Annex 1 – Geochemical analysis of rock samples.....	209
Annex 2 – Rock samples description.....	211
Annex 3 – Inspected water points.....	213
Annex 4 – Hydrochemical analysis of water samples.....	223
Annex 5 – Stable isotopes analysis of water samples.....	229
Annex 6 – Processed LandSat8 images.....	233
