

## Table of Contents

---

<b>1. Introduction</b>	<b>1</b>
1.1. Aim and structure of the thesis	1
1.2. Cellular materials	2
1.3. Particle-stabilized foam and emulsion templating	5
1.4. Ice-templating	8
1.5. 3D printing	12
1.6. Mechanics of cellular materials	17
1.7. References	22
<b>2. Foaming of recyclable clays into energy-efficient low-cost thermal insulators</b>	<b>29</b>
2.1. Introduction	30
2.2. Materials and methods	32
2.3. Results and discussion	34
2.4. Conclusions	46
2.5. References	47
<b>3. Freezing of gelled suspensions: a facile route towards mesoporous TiO<sub>2</sub> particles for high-capacity Li-ion electrodes</b>	<b>51</b>
3.1. Introduction	52
3.2. Materials and methods	53
3.3. Results and discussion	56
3.4. Conclusions	63
3.5. References	64
<b>4. 3D printing of emulsions and foams into hierarchical porous ceramics</b>	<b>69</b>
4.1. Introduction	69
4.2. Materials and methods	71
4.3. Results and discussion	73
4.4. Conclusions and outline	83
4.5. References	84

<b>5. 3D printing of UV-curable pickering emulsions into hierarchical porous composites and ceramics</b>	<b>89</b>
5.1. Introduction	90
5.2. Materials and methods	92
5.3. Results and discussion	94
5.4. Conclusions and outline	101
5.5. References	102
<b>6. Conclusion</b>	<b>107</b>
<b>7. Outlook</b>	<b>111</b>
<b>Appendix A.</b> Supplementary information for foaming of recyclable clays into energy-efficient low-cost thermal insulators	<b>115</b>
<b>Appendix B.</b> Supplementary information for freezing of gelled suspensions: a facile route towards mesoporous TiO <sub>2</sub> particles for high-capacity Li-ion electrodes	<b>125</b>
<b>Appendix C.</b> Supplementary information for 3D printing of emulsions and foams into hierarchical porous ceramics	<b>129</b>
<b>Appendix D.</b> Studying zeolite hydration via Raman confocal microscopy	<b>131</b>
D.1. Introduction	131
D.2. Materials and methods	131
D.3. Results and discussion	133
D.4. Conclusions and outline	141
D.5. References	141
<b>Declaration</b>	<b>145</b>
