Contents

Chapter 1 Introduction p. 17-27

Chapter 2 Contrasting fates of petrogenic and biospheric carbon in the South China Sea

Chapter 3 Mineral control of terrestrial organic matter preservation in the ocean p. 47-74

Chapter 4 A method for analyzing amino acid-specific radiocarbon from sediments p. 75-102

Chapter 5 Links between mineralogical composition and mineral properties

Chapter 5.1 Remarks on the surface area of homoionic phyllosilicates p. 105-121

Chapter 5.2 Water sorption-based surface area of environmental mineral matrices p. 122-133

Chapter 5.3 Observing relationships between mineralogy, mineral surface area, and cation exchange capacity of environmental mineral matrices p. 134-154

Chapter 6 Sulphuric acid-mediated weathering on Taiwan buffers geological atmospheric carbon sinks

Chapter 7 On the geological and scientific legacy of petrogenic organic carbon

Chapter 8 Synthesis and future directions p. 219-227
