
Table of Contents

List of abbreviations.....	v
List of tables.....	vii
List of figures.....	ix
Summary.....	xiv
Zusammenfassung.....	xvii
1 General introduction.....	1
1.1 CH ₄ and NH ₃ emissions from dairy cows.....	2
1.2 Formation of CH ₄ and NH ₃	2
1.3 Emission measurements by respiration chambers and the SF ₆ method.....	3
1.4 Mitigation of CH ₄ and NH ₃ emissions.....	4
1.5 Objectives of the thesis.....	5
2 Effects of housing system, floor type and temperature on ammonia and methane emissions from dairy farming: A meta-analysis.....	8
2.1 Abstract.....	9
2.2 Introduction.....	9
2.3 Materials and methods.....	11
2.3.1 Data sources.....	11
2.3.2 Statistical analysis.....	14
2.4 Results and discussion.....	15
2.4.1 NH ₃ emissions.....	15
2.4.2 CH ₄ emissions.....	22
2.5 Conclusions.....	27
3 A dual tracer ratio method for comparative emission measurements in an experimental dairy housing.....	29

3.1	Abstract	30
3.2	Introduction	30
3.3	Materials and methods	32
3.3.1	Experimental dairy housing	32
3.3.2	Implementation of the dual tracer gas ratio method.....	33
3.3.3	Wind data measurements	38
3.3.4	Validation experiments	39
3.4	Results and discussion	41
3.4.1	Equivalence of tracer gases	42
3.4.2	Suitability of tracer ratio method to quantify areal and point emission sources.....	44
3.4.3	Accuracy of the tracer ratio method to quantify GHG emissions.....	46
3.4.4	Sensitivity of the tracer ratio method.....	49
3.4.5	Cross-contamination between experimental sections	51
3.5	Conclusion	51
4	Comparative study of linseed effects on methane emissions and milk fatty acids from lactating cows as measured at herd level in an experimental housing and at individual level in respiration chambers	53
4.1	Abstract	54
4.2	Introduction	54
4.3	Materials and methods	56
4.3.1	Animals and feeding	56
4.3.2	Measurement of CH ₄ and CO ₂ emissions	59
4.3.3	Performance	60
4.3.4	Eating and ruminating behavior	60
4.3.5	Sampling	60
4.3.6	Laboratory analyses	61
4.3.7	Calculations and statistical analysis.....	63

4.4	Results	64
4.4.1	Performance, digestibility, as well as eating and ruminating behavior	64
4.4.2	CH ₄ and CO ₂ emissions	65
4.4.3	Milk composition	68
4.4.4	Nitrogen and energy balance.....	70
4.5	Discussion	71
4.5.1	Comparison of effects of linseed on performance at herd and individual level and linseed effects on nitrogen and energy utilisation.....	71
4.5.2	Comparison of effects of linseed on methane emission at herd and individual level	73
4.5.3	Comparison of effects of linseed on milk composition at herd and individual level.	74
4.5.4	Comparison of effects of linseed on milk fatty acids at herd and individual level....	75
4.6	Conclusions.....	76
5	Residual soiling mass after dung removal in dairy loose housings: Effect of scraping tool, floor type, dung removal frequency and season	77
5.1	Abstract	78
5.2	Introduction	78
5.3	Material and methods.....	82
5.3.1	Housings.....	82
5.3.2	Experimental design.....	84
5.3.3	Measuring method.....	85
5.3.4	Statistical analysis	87
5.4	Results	88
5.4.1	Experiment 1: Comparison of scraping tools and rubber mat types	88
5.4.2	Experiment 2: Comparison of floor types, dung removal frequencies and seasons ..	89
5.5	Discussion	91
5.5.1	Measuring method.....	91
5.5.2	Scraping tool	93

5.5.3	Rubber mat type	94
5.5.4	Floor type	94
5.5.5	Dung removal frequency	95
5.5.6	Season	95
5.6	Conclusions	97
6	General discussion and conclusions	98
6.1	Emission measurements at herd and individual level	98
6.2	Mitigation of emissions measured at herd and individual level	100
6.3	Additional factors measured at both herd and individual level	101
6.4	General conclusion	102
	Supplementary material to chapter 2	104
	Supplementary material to chapter 3	107
	Supplementary material to chapter 5	110
