List of tables	vii
List of abbreviations	ix
Abstract	xi
Sommario	xiii
<b>1 Introduction</b>	<b>1</b>
1.1 Motivation of research	2
1.2 The untapped potential of organic matter in sediments	4
1.3 Transition metals and their isotopes	6
1.3.1 Distributions and isotope compositions in the modern ocean	6
1.3.2 Sources and sinks to the ocean	9
1.4 Thesis structure	13
<b>2 Samples and Methods</b>	<b>15</b>
2.1 Modern settings and sample locations	16
2.1.1 Peru Margin	16
2.1.2 Lagoa Salgada	18
2.2 Geological record settings and samples	18
2.3 Analytical Methods	23
2.3.1 HF-HCl sample digestion and separation of HFD and OPF	23
2.3.2 Preliminary tests of pyrite separation from the OPF	24
2.3.3 Elemental concentration analysis	25
2.3.4 Column chromatography	26
2.3.5 Transition metal stable isotope analysis	29
2.3.5.1 Fe isotope analysis setup details	30
2.3.5.2 Interference corrections in transition metal stable isotope analyses	30
2.3.6 Carbon concentration and isotope analysis	32
2.4 Data quality assessment	33
2.4.1 Elemental concentrations by ICPMS vs. MC-ICPMS (isotope dilution)	33
2.4.2 Tests of digestion approach	35
<b>3 Nickel and its isotopes in organic-rich sediments: implications for oceanic budgets and a potential record of ancient seawater</b>	<b>39</b>
3.1 Introduction	40

3.2	Setting	42
3.2.1	Peru margin	42
3.2.2	Lagoa Salgada	42
3.3	Methods	43
3.3.1	Digestion and extraction	43
3.3.2	Elemental concentration analyses	43
3.3.3	Column chromatography for Ni purification	44
3.3.4	Isotope analyses of Ni	44
3.3.5	Method testing	45
3.3.6	TOC and $^{13}\text{C}$	45
3.4	Results	46
3.4.1	Peru Margin	46
3.4.1.1	Organic carbon in Peru Margin sediments	46
3.4.1.2	Ni concentrations and isotopic composition of modern organic-rich sediments	46
3.4.2	Lagoa Salgada	47
3.4.2.1	Organic carbon in Lagoa Salgada sediments	47
3.4.2.2	Ni concentrations and isotopic composition of Lagoa Salgada carbonate-rich sediments	48
3.5	Discussion	48
3.5.1	The source of Ni in Peru Margin organic-rich sediments	48
3.5.2	Nickel isotopes in the organic-pyrite fraction: a biogenic signal from the upper ocean	52
3.5.3	Detrital correction to bulk sediment and authigenic Ni in Peru Margin sediments	54
3.5.4	Re-assessment of the oceanic mass balance of Ni and its isotopes	56
3.6	Conclusions	59

#### 4 Copper and its isotopes in organic-rich sediments: from the modern Peru Margin to Archean shales **63**

4.1	Introduction	64
4.2	Setting	66
4.3	Methods	67
4.3.1	Tests of the two-step digestion methodology	68
4.4	Results	69
4.4.1	Organic carbon abundance and isotope composition	69
4.4.2	Cu concentrations and isotope composition of modern organic-rich sediments	70
4.4.3	Cu concentration and isotope composition of ancient organic-rich sediments	70
4.5	Discussion	71
4.5.1	The source of Cu in Peru Margin organic-rich sediments	71
4.5.2	The control of sulphidation on Cu isotopes in Peru Margin sediments	74
4.5.3	Detrital correction and authigenic Cu in modern Peru Margin and ancient sediments	79
4.5.4	Copper and its isotopes in bulk ancient shales	80
4.5.5	Copper in the OPF of ancient shales: not only sulphidation	82
4.6	Summary and conclusions	85

#### 5 Iron, Zn, Mo and their isotopes in organic-rich sediments: from the modern Peru Margin to Archean shales **89**

5.1	Introduction	90
-----	--------------	----

5.2	Setting, samples, and methods	92
5.2.1	Peru Margin	92
5.2.2	Geological record	93
5.2.3	Methods	93
5.3	Results	93
5.3.1	Fe and Zn concentrations and isotope compositions of modern organic-rich sediments	94
5.3.2	Fe and Zn concentrations and isotope compositions of ancient organic-rich sediments	96
5.3.3	Impact of the blank correction on Mo concentrations and isotope data	99
5.3.4	Mo concentrations and isotope compositions of modern organic-rich sediments	100
5.3.5	Mo concentrations and isotope compositions of ancient organic-rich sediments	102
5.4	Discussion	104
5.4.1	Zinc and its isotopes in Peru Margin sediments	104
5.4.1.1	Zn abundances relative to carbon: biological uptake in the photic zone	104
5.4.1.2	Zn isotopes in the organic-pyrite fraction of Peru Margin sediments	105
5.4.1.3	Zn isotopes in bulk Peru Margin sediments: correction for detrital Zn	106
5.4.2	Iron and its isotopes in Peru Margin sediments	107
5.4.2.1	Iron in bulk sediments: the open-marine iron shuttle	107
5.4.2.2	Iron isotopes in the organic-pyrite fraction	109
5.4.3	Molybdenum and its isotopes in Peru Margin sediments: the Fe-Mn oxide particulate shuttle and sulphide sequestration	111
5.4.3.1	Mo-TOC relationships in upwelling margins	111
5.4.3.2	The Mo isotope signature of combined Fe-Mn oxide and sulphide sequestration	112
5.4.4	Controls on the isotope signatures of Fe, Zn, and Mo in ancient organic-rich sediments	113
5.4.4.1	Fe and its isotopes	113
5.4.4.2	Mo and its isotopes	115
5.4.4.3	Zn and its isotopes	116
5.5	Summary and conclusions	117

#### 6 Conclusions and outlook **125**

6.1	Conclusions	126
6.1.1	Ni isotopes as potential tracers of past seawater composition and biological fractionation	126
6.1.2	The control of sulphidation on Cu in modern sediments and a potentially heavier past ocean	127
6.1.3	Delivery of Zn to modern sediments by biological uptake	127
6.1.4	Multiple processes of Mo enrichment in modern sediments and redox changes through time	128
6.1.5	The open-marine Fe shuttle in modern Peru Margin sediments	128
6.2	Outlook	129
