1	Introduction	11
2	$\mathcal{N} = 4$ supersymmetric Yang–Mills theory	17
2.1	Field content and the action	17
2.2	Lie-type symmetries of $\mathcal{N} = 4$ sYM: $\mathfrak{psu}(2, 2 4)$ Lie algebra	19
2.3	Planar limit	21
2.4	Integrability results in $\mathcal{N} = 4$ sYM	22
2.4.1	Dilatation operator	22
2.4.2	Scattering amplitudes and the dual superconformal symmetry	23
2.4.3	Identification of Yangian symmetry	23
3	Yangian algebras	25
3.1	Structures of Hopf algebras	25
3.2	Yangian algebras	26
4	Symmetries of equations of motion	29
4.1	Equations of Motions in $\mathcal{N} = 4$ sYM	30
4.2	Lie-type symmetries of the equations of motion	30
4.3	Yangian symmetry of the equations of motion	32
4.3.1	Weak invariance of the equations of motion	34
4.3.2	Strong invariance of the equations of motion	36
4.3.3	$\mathcal{N} < 4$ sYM verification of the strong invariance	38
5	Yangian symmetry in β-deformed sYM	41
5.1	β -deformed $\mathcal{N} = 4$ SYM	42
5.2	Untwisting the twist	42
5.3	Twisted Yangian	45
6	Yangian invariance of the action	47
6.1	Notation	47
6.2	Level zero	49
6.3	Level one	51
7	Variety of gauge symmetries and gauge fixing	61
7.1	Bi-local commutators	61
7.2	Bi-local gauge symmetries	64
7.2.1	Bi-local gauge symmetries	64
7.3	Faddeev – Popov gauge fixing and appearance of BRST symmetry	66

7.4	BRST symmetry	68
7.4.1	Local symmetries	69
7.4.2	Bi-local symmetries	70
8	Slavnov – Taylor identities	75
8.1	Slavnov–Taylor identities	75
8.1.1	Local symmetries	75
8.1.2	Bi-local total variations	76
8.1.3	Bi-local symmetries	77
9	Yangian invariance of Correlation Functions	81
9.1	Propagators	81
9.1.1	Diagrammatic notation	84
9.2	Level-zero symmetries of three-point functions	84
9.3	Bi-local symmetries of three-point functions	88
9.4	Level-1 symmetry of the four-point function	96
10	The fate of Yangian symmetry at quantum level	99
10.1	Loop effects	99
10.2	Three-point function at one loop: superconformal symmetry	100
10.3	Three-point function at one loop: Yangian symmetry	100
10.4	Anomalies	103
10.5	Anomalies in $\mathcal{N} = 4$ sYM	104
11	Conclusions and outlook	107
A	$\mathfrak{psu}(2, 2 4)$ superconformal symmetry and its Yangian	111
A.1	$\mathfrak{psu}(2, 2 4)$ algebra	111
A.2	Level-one generators	114
B	Representation theory of $\mathfrak{psu}(2, 2 4)$	117
C	The fundamental representation of $\mathfrak{u}(2, 2 4)$	119
D	Yangian symmetry of β-deformed sYM: Appendix	121
D.1	Twisted R-symmetry	121
D.2	Action of supersymmetry generators	121
D.2.1	Nondeformed $\mathcal{N} = 1$ supersymmetry	121
D.2.2	The hidden supersymmetry generators	122
D.3	Equations of motion	122
E	Level-one invariance of the three-point function at one loop	125
