List of Figures xii

List of Tables xvii

1	INTRODUCTION	1
1.1	Crystallization and oiling out	2
1.2	Thermodynamic modelling	6
1.2.1	Numerical Method	7
1.2.2	Activity Coefficient Models	9
1.3	Particle sizing and crystal shape	12
1.4	Objectives and structure of this thesis	16
2	EFFECT OF CRYSTAL SHAPE ON MEASURED PARTICLE SIZE DISTRIBUTIONS	19
2.1	Introduction	19
2.2	Motivation	22
2.2.1	Describing a single cylinder as a sphere	22
2.2.2	Describing an ensemble of cylinders as an ensemble of spheres	26
2.3	Extended Virtual Test Bench (eVTB)	29
2.3.1	Polytopic Particle Model	31
2.3.2	Morphological Population Balance Equation (PBE)	32
2.3.3	Particle Sizing Techniques	34
2.4	Comparison of Particle Sizing Technologies for Vanillin	39
2.4.1	1D Sizing Techniques	39
2.4.2	2D Sizing Techniques	42
2.5	Estimation of Growth Kinetics of Paracetamol	43
2.5.1	Setup for in silico experiments	43
2.5.2	Parameter estimation	47
2.5.3	Results and Discussion	48
2.6	Conclusion	56
3	INFLUENCE OF LLPS ON THE CRYSTALLIZATION OF L-MENTHOL	59
3.1	Introduction	59
3.2	Experimental	61
3.2.1	Materials	61
3.2.2	Methods	62
3.3	Binary Phase Diagram	63
3.3.1	Solid-liquid equilibrium experiments	63
3.3.2	Liquid-liquid equilibrium experiments	64
3.3.3	Solid-liquid-liquid equilibrium experiments	64

3.3.4	Measured Phase Diagram	65
3.4	Results	67
3.4.1	Online monitoring with Raman spectroscopy	67
3.4.2	Determination of polymorphic form and amount of solvent inclusion	67
3.4.3	Base case experiment	70
3.5	Effect of oiling out conditions on amount of inclusions	78
3.5.1	Effect of suspension density	78
3.5.2	Effect of cooling rate	80
3.6	Type of solvent inclusion	81
3.7	Conclusion	82
4	CRYSTALLIZATION PROCESS DESIGN USING THERMODYNAMICS TO AVOID OILING OUT IN A MIXTURE OF VANILLIN AND WATER	85
4.1	Introduction	85
4.2	Experimental	88
4.2.1	Materials	88
4.2.2	Experimental Setup	89
4.2.3	ATR-FTIR Calibration	89
4.2.4	Solid-Liquid Equilibrium (SLE) Measurements	92
4.2.5	Liquid-Liquid Equilibrium (LLE) Measurements	94
4.3	Modeling	95
4.3.1	Phase Equilibrium	95
4.3.2	Activity Coefficient Models	96
4.3.3	Parameter Estimation	96
4.3.4	Results	98
4.4	Experimental Proof of Concept	99
4.5	Process Design	106
4.6	Conclusion	109
5	THERMODYNAMIC MODELING OF A TERNARY MIXTURE DISPLAYING OILING OUT	111
5.1	Introduction	111
5.2	Experimental Methods	113
5.2.1	Materials	113
5.2.2	Inertization and Storage	113
5.2.3	Reactors and Online Monitoring	114
5.2.4	X-Ray Diffraction (XRD)	115
5.2.5	High Pressure Liquid Chromatography (HPLC)	115
5.2.6	Gas Chromatography (GC)	116
5.3	Phase Diagrams	116
5.3.1	Binary Phase Diagrams	116

5.3.2	Ternary Phase Diagrams	123
5.4	Thermodynamic Modelling	133
5.4.1	Phase Equilibrium and Activity Coefficient Model	133
5.4.2	Parameter Estimation	134
5.4.3	Results	137
5.5	Applications	140
5.5.1	Operating Boundary	140
5.5.2	Process Monitoring	143
5.6	Conclusion	148
6	PROCESS DESIGN OF A TERNARY MIXTURE DISPLAYING OILING OUT	151
6.1	Introduction	151
6.2	Process Description	152
6.2.1	Upstream	152
6.2.2	Reactor	153
6.2.3	Crystallizer 1	153
6.2.4	Centrifuges	154
6.2.5	Distillation column	154
6.2.6	Crystallizer 2	155
6.2.7	Heater	155
6.3	Modelling	157
6.3.1	Crystallizer 1: oiling out constraint	158
6.3.2	Crystallizer 2: avoiding precipitation of product P	158
6.3.3	Distillation column simulation	162
6.4	Sensitivity Analysis	170
6.5	Identification of Criticalities	178
6.6	Conclusions	180
7	CONCLUSIONS	181
7.1	Crystal shape and particle size distributions	183
7.2	Consequences of crystallization in the presence of oiling out	184
7.3	Strategy to circumvent oiling out	185
7.4	Ternary phase diagram measurements and modelling	186
7.5	Process modelling including crystallization	187
A	APPENDIX	189
A.1	Appendix of Chapter 2	189
A.2	Appendix of Chapter 4	194
A.2.1	Approximate Confidence Intervals	194
