Abstract	vii
Zusammenfassung	ix
Nomenclature	xvii
1 Introduction	1
1.1 Gas engine background	1
1.2 Unscavenged prechamber working principle	5
1.3 Objectives and structure	6
2 Literature review	9
2.1 Turbulent combustion fundamentals	9
2.2 Turbulence and combustion modelling	12
2.3 State-of-the-art prechamber research	19
2.4 Conclusions	24
3 Methodology	27
3.1 Experimental approaches	27
3.1.1 Six-cylinder engine test bench and in-prechamber pressure measurement	27
3.1.2 RCEM test bench and 2D OH* chemiluminescence optical diagnostic	30
3.2 Image post-processing method	34
3.3 Numerical method	37
3.3.1 Turbulence model	37
3.3.2 Combustion model	38
3.3.3 Reaction kinetics and laminar flame speed/thickness	39
3.3.4 Turbulent flame speed correlations	44
3.3.5 Spark ignition model	47

3.3.6	Flame wall interaction model	52
4	Preliminary study of the open chamber ignition in full engine	55
4.1	Validation of the open chamber spark ignition model	55
4.1.1	Validation cases and numerical setup	55
4.1.2	Parametric sensitivity analysis	56
4.1.3	Validation for two equivalence ratios	58
4.2	Validation of the G -equation combustion model	60
4.2.1	Numerical setup	60
4.2.2	Mesh Sensitivity study	61
4.2.3	Validation over engine sweeps	64
4.3	Open chamber combustion flame characteristics indicated in the Borghi-Peters diagram	73
4.4	Comparison of turbulent flame speed correlations	74
4.5	Comparison of $k - \epsilon$ model and $k - \omega$ model	76
4.6	Summary	78
5	Investigation of the unscavenged prechamber combustion on the engine	81
5.1	Investigation of the pressure difference between the pre and main chambers	81
5.1.1	Unscavenged prechamber and operating condition matrix	81
5.1.2	Numerical setup	83
5.1.3	Reference operating point analysis	84
5.1.4	Single parameter variations	87
5.1.5	Correlating dp with physical parameters	94
5.2	Numerical investigations of the prechamber engine combustion	100
5.2.1	Numerical setup	100
5.2.2	Comparison of turbulent flame speed correlations	102
5.2.3	Model validation	115
5.3	Summary	122

6	Investigations of the unscavenged prechamber combustion on the RCEM	125
6.1	Prechambers and measurement matrix	125
6.2	Turbulence and combustion models	126
6.3	Numerical setup	127
6.4	Optical investigations — preliminary study of the ignition mechanism	129
6.5	Model validation	132
6.6	Discussion	139
6.6.1	Flame jet characterization	139
6.6.2	Parametric study	141
6.7	Effect of the prechamber combustion	145
6.8	Summary	150
7	Conclusion and outlook	155
7.1	General conclusions	155
7.1.1	Full metal engine investigations	155
7.1.2	Research on the RCEM	157
7.2	Outlook	158
7.2.1	Prechamber combustion fundamentals	159
7.2.2	Prechamber combustion modelling	160
7.2.3	Engineering tools in the prechamber development	162
	Bibliography	175
	Curriculum Vitae	193
