| Abstract   | iii      |
| Zusammenfassung  | v        |
| Acknowledgements   | vii      |
| Preface  | ix       |
| Contents   | xi       |
| <b>1 Introduction</b>  | <b>1</b> |
| 1.1 Outline of this thesis   | 3        |
| 1.2 Nomenclature and notation  | 4        |
| <b>2 ProjectQ: An Open Source Software Framework for Quantum Computing</b> | <b>5</b> |
| 2.1 Introduction   | 6        |
| 2.2 The ProjectQ framework   | 9        |
| 2.3 Compiling to quantum hardware  | 10       |
| 2.4 Methodology behind ProjectQ  | 12       |
| 2.5 High-level quantum programming language                                | 17       |
| 2.5.1 A quantum Hello World!   | 18       |
| 2.5.2 The basic (quantum) types  | 19       |
| 2.5.3 Quantum gates and functions  | 21       |
| 2.5.4 Meta-instructions  | 27       |
| 2.6 Compiler and compiler engines  | 32       |
| 2.6.1 Pre-defined setups   | 34       |
| 2.7 Back-ends  | 35       |
| 2.7.1 Hardware back-end: IBM Quantum Experience                            | 35       |
| 2.7.2 Simulation of quantum circuits                                       | 36       |
| 2.7.3 Emulation of quantum circuits  | 39       |
| 2.7.4 Resource estimation  | 39       |

|          |  |           |
|----------|--|-----------|
| 2.7.5    | Circuit drawing back-end . . . . .                                       | 40        |
| 2.8      | Libraries . . . . .  | 40        |
| <b>3</b> | <b>Implementation Aspects of ProjectQ</b>                                | <b>43</b> |
| 3.1      | Mapping quantum programs to hardware with limited connectivity           | 44        |
| 3.2      | Intermediate representation . . . . .                                    | 50        |
| 3.2.1    | Implementation of meta instructions . . . . .                            | 52        |
| <b>4</b> | <b>Standard Quantum Algorithms</b>                                       | <b>55</b> |
| 4.1      | Quantum teleportation . . . . .  | 56        |
| 4.2      | Grover's search algorithm . . . . .                                      | 57        |
| 4.3      | Phase estimation . . . . .   | 58        |
| 4.4      | Shor's algorithm for factoring . . . . .                                 | 62        |
| 4.5      | Simulation of quantum systems using a quantum computer . . . . .         | 66        |
| 4.5.1    | Sparse representation of the Hamiltonian . . . . .                       | 66        |
| 4.5.2    | FermiLib . . . . .   | 68        |
| 4.5.3    | Time evolution of a quantum system . . . . .                             | 69        |
| 4.5.4    | Spectral properties using phase estimation . . . . .                     | 73        |
| 4.5.5    | Variational quantum eigensolver . . . . .                                | 74        |
| 4.5.6    | Entanglement spectroscopy . . . . .                                      | 78        |
| <b>5</b> | <b>Quantum Algorithm for Spectral Measurement with Lower Gate Counts</b> | <b>83</b> |
| 5.1      | Spectrum by quantum walk . . . . .                                       | 84        |
| 5.1.1    | Proofs . . . . .   | 87        |
| 5.2      | Implementation . . . . .   | 92        |
| <b>6</b> | <b>Summary and Outlook</b>   | <b>95</b> |
|          | List of my publications  | 97        |
|          | Bibliography   | 99        |
|          | Curriculum Vitae   | 111       |
