Acknowledgments	iii
Abstract	vii
Zusammenfassung	ix
1. Introduction	1
1.1 Motivation	1
1.2 Electronic devices based on liquid metal	2
1.3 Contribution	9
1.4 Thesis outline	11
Bibliography	13
2. Shape transformation and motion of liquid metal	23
2.1 Translation and rolling of liquid metal droplets	24
2.2 Shape reconfiguration using electrochemical actuation .	31
2.3 Mechanical deformation of eGaIn	35
Bibliography	37
3. Inertial sensor based on free-moving eGaIn droplet	43
3.1 Introduction	44
3.2 Methods and materials	46
3.3 Results	50
3.4 Conclusion	55
Bibliography	57
4. Tunable capacitors with reconfigurable liquid metal electrodes	63
4.1 Introduction	63
4.2 Methods and materials	65
4.3 Results	89
4.4 Conclusion	98
Bibliography	101

5. Stretchable eGaIn conductors on neoprene for wearable MRI coils	105
5.1 Introduction	106
5.2 Methods and materials	108
5.3 Results	110
Bibliography	117
Appendix I	121
Appendix II	129
Appendix III	135
Glossary	145
Curriculum Vitae	149
