

CONTENTS

1	INTRODUCTION	1
1.1	A brief overview of the cytoskeleton	1
1.2	The microtubule cytoskeleton	2
1.3	Intrinsic microtubule dynamics	4
1.3.1	Microtubule catastrophe	5
1.3.2	Microtubule rescue	6
1.4	Tubulin and microtubules in yeast cells	8
1.5	Microtubule-associated proteins (MAPs) in yeast	8
1.5.1	EB plus tip tracking proteins	9
1.5.2	CLIP family	9
1.5.3	XMAP polymerases	10
1.5.4	CLASPs	11
1.5.5	Kinesins	12
1.5.6	MAP4 / Mhp1	15
1.6	Contribution of this thesis	15
2	BRIDGING INTRACELLULAR SCALES BY MECHANISTIC COMPUTATIONAL MODELS	17
2.1	Abstract	17
2.2	Introduction	18
2.3	Reaction, diffusion, and crowding	20
2.4	Spatial stochastic effects in cell signaling	23
2.5	Challenge: Active transport	24
2.6	Challenge: Dynamic cellular geometries	25
2.7	Challenge: Model calibration and inference	25
2.8	Conclusions	26
2.9	Acknowledgements	26
3	STOCHASTIC SIMULATION OF MICROTUBULES WITH THE COORDINATE-AWARE C++ REACTION-DIFFUSION MASTER EQUATION SIMULATOR RDMECPP.	27
3.1	Abstract	27
3.2	Introduction	28
3.3	Materials and methods	29
3.3.1	Geometry, meshing and matrix assembly	29
3.3.2	Point-to-subvolume mapping	29
3.3.3	Microtubule dynamics across subvolume boundaries	30
3.3.4	Data analysis and visualization in MATLAB	31
3.4	Results and discussion	32
3.4.1	Stochastic simulation engine	32
3.4.2	Simulation performance	32
3.4.3	Deterministic model of autocatalytic microtubule nucleation	32
3.4.4	Stochastic model of autocatalytic microtubule nucleation	34
3.4.5	Steady state solution and dynamics	36
3.5	Conclusion	41
3.5.1	Outlook	41

3.6	Acknowledgements	41	5.6.1	Materials and methods	76
3.7	Author contributions	42	5.6.2	Supplementary Text	78
3.8	Supporting information	42	5.6.3	Supplementary Figures	87
3.8.1	Continuous reaction-diffusion problem	42	5.6.4	Supplementary Tables	95
3.8.2	Mass Matrix Diagonalization	45	6	CONCLUDING REMARKS AND OUTLOOK	99
3.8.3	Conversion to molecule numbers	46	6.1	Towards an integrated <i>in silico</i> model of the microtubule cytoskeleton and its regulation	100
3.8.4	Deterministic simulation	46	6.2	Quantitative modeling of tubulin allocation and availability: testing our predictions further	101
3.8.5	Reaction terms	46	6.3	SPBs exert more control over the microtubules they nucleate than previously believed	102
3.8.6	Documentation	46	6.4	Future uses for the Kip2 data analysis pipeline	103
3.8.7	URDME compatibility	46	Bibliography	105	
4	ON THE ESSENTIALITY OF MICROTUBULE (DE-)POLYMERASES – WHY IS TUBULIN NOT ENOUGH?	49	Curriculum vitae	137	
4.1	Highlights	49			
4.2	Summary	49			
4.3	Introduction	50			
4.4	Results and Discussion	51			
4.4.1	Estimating the total tubulin concentrations in <i>S. cerevisiae</i> and <i>S. pombe</i>	51			
4.4.2	During mitosis, a substantial fraction of tubulin is bound in the spindle	52			
4.4.3	Free tubulin concentrations during mitosis are in the hundred-nanomolar range	54			
4.4.4	Validating tubulin estimates required for spindle assembly in <i>S. cerevisiae</i> using knockout data	54			
4.4.5	Free concentrations <i>in vivo</i> are below the critical concentrations for yeast tubulin assembly <i>in vitro</i>	56			
4.4.6	Concentration requirements for microtubule nucleation are higher than for microtubule growth	57			
4.4.7	Our tubulin estimates and microtubule nucleation / polymerization model explain the lethality of microtubule polymerase knockouts	61			
4.4.8	<i>In vivo</i> microtubule dynamics mandate regulated nucleation, polymerization, and depolymerization mechanisms beyond the capabilities of free tubulin pool regulation	62			
4.4.9	Conclusions	63			
4.5	Acknowledgements	64			
4.6	Author contributions	64			
4.7	Supplementary Information	65			
4.7.1	Supplementary Figures	65			
5	A MECHANISM FOR THE CONTROL OF MICROTUBULE PLUS-END DYNAMICS FROM THE MINUS-END	67			
5.1	Abstract	67			
5.1.1	One Sentence Summary	67			
5.2	Main Text	68			
5.3	Acknowledgements	75			
5.4	Author contributions	75			
5.5	Data and materials availability	75			
5.6	Supplementary materials	76
