<b>Abstract</b>	<b>i</b>
<b>Introduzione - Zusammenfassung - Zämefassung</b>	<b>iii</b>
<b>Zusammenfassung</b>	<b>v</b>
<b>1 Introduction</b>	<b>1</b>
1.1 The homogeneous Universe . . . . .	3
1.2 The inhomogeneous Universe . . . . .	7
1.2.1 Linear perturbation theory . . . . .	7
1.2.2 Cosmological structure formation . . . . .	9
1.3 Observational probes . . . . .	12
1.3.1 Statistics of random fields . . . . .	12
1.3.2 Cosmic Microwave Background . . . . .	14
1.3.3 Galaxy clustering . . . . .	15
1.3.4 Cosmic shear . . . . .	18
1.3.5 Background probes . . . . .	21
<b>2 Three-dimensional spherical analyses of cosmological spectroscopic surveys</b>	<b>23</b>
2.1 Introduction . . . . .	23
2.2 Comparison baseline . . . . .	24
2.3 Three-dimensional spherical power spectra . . . . .	26
2.3.1 The Cartesian power spectrum . . . . .	26
2.3.2 The spherical harmonic tomography power spectrum . . . . .	29
2.3.3 The spherical Fourier Bessel power spectrum . . . . .	31
2.4 Fisher matrices for 3D spherical power spectra . . . . .	34
2.4.1 The Fisher matrix for the spherical harmonic tomography power spectrum	34
2.4.2 The Fisher matrix for the SFB power spectrum . . . . .	35
2.5 Results . . . . .	36
2.5.1 Spherical harmonic tomography power spectrum . . . . .	36
2.5.2 Spherical Fourier Bessel power spectrum . . . . .	40
2.5.3 Comparison between spherical harmonic tomography and SFB power spectrum . . . . .	43
	<b>vii</b>

2.5.4	Implementation effects on estimated survey constraining power	44
2.6	Conclusions	45
2.A	The radialization of the SFB power spectrum in the presence of RSDs	46
2.B	The SFB power spectrum for a generic distance-redshift relation	46
2.C	Derivation of the Fisher matrix for the SFB power spectrum	48
2.C.1	Full Fisher matrix	48
2.C.2	Diagonal Fisher matrix	50
2.D	Comparison of FM computation techniques for the SFB power spectrum: Results	50
<b>3</b>	<b>Integrated approach to cosmology: combining CMB, large-scale structure and weak lensing</b>	<b>53</b>
3.1	Introduction	53
3.2	Framework	55
3.3	Theoretical predictions	56
3.4	Maps	57
3.4.1	Cosmic Microwave Background	57
3.4.2	Galaxy overdensity	60
3.4.3	Weak lensing	61
3.5	Spherical harmonic power spectra	63
3.5.1	CMB	64
3.5.2	Galaxy clustering	66
3.5.3	Cosmic shear	66
3.5.4	CMB and galaxy overdensity cross-correlation	68
3.5.5	CMB and weak lensing shear cross-correlation	68
3.5.6	Galaxy overdensity and weak lensing shear cross-correlation	69
3.6	Covariance matrix	69
3.6.1	Theoretical covariance estimate	70
3.6.2	Covariance estimate from Gaussian simulations	70
3.7	Cosmological constraints	71
3.8	Conclusions	77
3.A	Theoretical prediction for CMB and weak lensing shear cross-correlation	79
3.B	Treatment of systematic uncertainties in galaxy clustering data	81
3.C	PSF correction and construction of weak lensing shear maps	81
3.D	Transformation of weak lensing shear under rotation	85
3.E	Choice of $\text{PolSpice}$ parameter settings	85
3.F	Correlated maps of spin-0 and spin-2 fields	86
3.G	Validation of spherical harmonic power spectrum measurements	89
3.H	Spherical harmonic power spectrum robustness tests	89
3.H.1	Comparison between spherical harmonic power spectra in equatorial and Galactic coordinates	91
3.H.2	Comparison between spherical harmonic power spectra derived from different foreground-reduced CMB maps	92

3.H.3	Impact of systematics correction on galaxy clustering power spectrum	92
<b>4</b>	<b>Integrated cosmological probes: extended analysis</b>	<b>95</b>
4.1	Introduction	95
4.2	Framework for integrated probe combination	96
4.3	Data	96
4.3.1	DES weak lensing	97
4.3.2	CMB lensing convergence	99
4.3.3	Type Ia supernovae	100
4.3.4	Hubble parameter	100
4.4	Model predictions	100
4.5	Spherical harmonic power spectra	103
4.5.1	DES SV cosmic shear	104
4.5.2	CMB temperature and DES SV weak lensing shear cross-correlation	105
4.5.3	CMB lensing convergence and galaxy overdensity cross-correlation	105
4.5.4	CMB lensing convergence and CMB temperature cross-correlation	106
4.5.5	CMB lensing convergence and SDSS Stripe 82 weak lensing shear cross-correlation	106
4.5.6	CMB lensing convergence and DES SV weak lensing shear cross-correlation	106
4.6	Systematics	108
4.6.1	CMB temperature anisotropies	108
4.6.2	Galaxy overdensity	108
4.6.3	Weak lensing	108
4.6.4	CMB lensing convergence	109
4.6.5	SNe Ia	110
4.7	Covariance matrix	110
4.8	Parameter inference	111
4.9	Cosmological constraint results	114
4.10	Conclusions	115
4.A	Impact of intrinsic alignments	123
4.B	Impact of baryonic processes on the dark matter power spectrum	125
4.C	Correlated spin-0 and spin-2 fields	127
4.D	Validation of spherical harmonic power spectrum measurement	131
4.E	Spherical harmonic power spectrum robustness tests	131
4.E.1	Comparison between spherical harmonic power spectra in equatorial and Galactic coordinates	131
4.E.2	Comparison between spherical harmonic power spectra measured from different foreground-reduced CMB temperature maps	134
4.F	Impact of unresolved foregrounds on CMB temperature anisotropies	134

<b>5</b>	<b>Integrated cosmological probes: concordance quantified</b>	<b>139</b>
5.1	Introduction . . . . .	139
5.2	Assessing concordance . . . . .	140
5.3	Data . . . . .	143
5.4	Results . . . . .	144
5.5	Conclusions . . . . .	147
5.A	Gaussianity tests . . . . .	152
<b>6</b>	<b>Consistency tests in cosmology using relative entropy</b>	<b>155</b>
6.1	Introduction . . . . .	155
6.2	Data and parameter space . . . . .	156
6.3	Data set consistency: fixed model and different data . . . . .	157
6.3.1	Sequential experiments . . . . .	157
6.3.2	Toy model . . . . .	162
6.4	Model rejection: fixed data and different models . . . . .	164
6.4.1	Implementation . . . . .	166
6.4.2	Toy model . . . . .	167
6.4.3	Application to cosmological data . . . . .	169
6.5	Conclusions . . . . .	174
6.A	Assessing consistency for arbitrary updates . . . . .	175
6.B	Gaussianity tests . . . . .	175
6.C	Alternative method for computing the relative entropy . . . . .	176
6.D	Toy model implementation details . . . . .	176
6.D.1	Implementation choices . . . . .	176
6.D.2	Choice of fiducial polynomial coefficients . . . . .	177
6.E	SNe Ia and CMB posterior means . . . . .	177
<b>7</b>	<b>Conclusions</b>	<b>181</b>
