Abstract	1
Zusammenfassung	3
1. Introduction	5
1.1 Scientific motivation	5
1.2 Research questions (RQ).....	6
1.2.1 RQ 1 – Landslides and debris-flow activity	6
1.2.2 RQ 2 – The importance of debris-flow erosion and entrainment.....	6
1.2.3 RQ 3 – Sensitivity testing of debris-flow entrainment model.....	7
2. Debris-flow research: disposition, activity, erosion and entrainment.....	9
3. Methodology	13
3.1 Evaluation and analysis of precipitation data.....	13
3.2 Assessment of landslides, debris-flow frequency and yield.....	14
3.3 RAMMS debris-flow runout model	15
3.4 Empirical entrainment algorithm.....	17
3.5 Field campaign at the Spreitgraben catchment.....	20
4. Synthesis results.....	23
4.1 Debris-flow activity after sudden landslide.....	23
4.2 Debris-flow entrainment modeling	27
5. Discussion	31
5.1 Changes in debris-flow activity after sudden vs. increased-continuous sediment influx	31
5.2 Importance of field data	31
5.3 Debris-flow initiation and runout modeling.....	32
5.4 Entrainment model coefficients.....	32
5.5 Combined findings.....	33
6. Conclusions and Outlook	35
