

TABLE OF CONTENTS

LIST OF FIGURES.....	v
LIST OF ACRONYMS AND ABBREVIATIONS	v
ACKNOWLEDGEMENTS.....	vi
DEDICATION	viii
SUMMARY	ix
CHAPTER 1: INTRODUCTION.....	1
1.1. The genus <i>Salmonella</i>	1
1.2. Epidemiology of nontyphoidal salmonellosis.....	1
1.3. Invasive nontyphoidal salmonellosis in sub-Saharan Africa	2
1.4. Factors associated with invasive NTS disease in sub-Saharan Africa.....	3
1.4.1. Host factors.....	3
1.4.1.1. Young age	3
1.4.1.2. Malnutrition.....	3
1.4.1.3. Sickle-cell disease	4
1.4.2. Co-endemic pathogens.....	4
1.4.2.1. HIV.....	4
1.4.2.2. Malaria, malarial anemia, and anaemia	5
1.4.3. Environmental factors.....	6
1.4.4. Pathogen factors.....	7
1.5. Diagnosis and clinical features of iNTS disease	10
1.6. NTS disease management	11
1.6.1. Antibiotics	11
1.6.2. State of vaccine development.....	12
1.7. Natural history and pathogenesis of NTS infection and disease	14
1.7.1. Infection and systemic spread of NTS.....	15
1.7.2. Host defences in systemic NTS.....	18
1.7.2.1. Phagocytic cells.....	18
1.7.2.2. Cytokines.....	19
1.7.2.3. T cells.....	20
1.7.2.4. B cells.....	21
1.7.2.5. Antibody.....	21
1.7.2.6. Complement	22
1.8. Factors determining susceptibility to antibody-mediated complement-dependent bactericidal activity in <i>Salmonella</i> Typhimurium	24
1.8.1. LPS O-antigen	26
1.8.2. Other Enterobacterial surface polysaccharides: Enterobacterial common antigen, colanic acid, and Group IV (O-antigen) capsules.....	29
1.8.3. Membrane proteins.....	30
1.8.3.1. Rck.....	30

1.8.3.2.	PgtE	31
1.8.3.3.	TraT	32
1.8.3.4.	PagC	32
1.8.3.5.	Rsk	32
1.8.4.	Bacterial growth phase	33
1.8.5.	Regulation of complement resistance factors in <i>S. Typhimurium</i>	33
1.8.5.1.	Phase variation	34
1.8.5.2.	Two-component regulatory systems	34
1.8.5.2.1.	PhoP/Q	35
1.8.5.2.2.	PmrA/B	36
1.8.5.2.3.	RcsCBD/YojN	36
1.8.5.3.	DNA adenine methylation	36
1.9.	Thesis Rationale and Hypotheses	37
1.10.	Aim and Objectives	38
CHAPTER 2: PAPER 1		40
Antibody is key to living with invasive African <i>Salmonella</i> Typhimurium		
CHAPTER 3: PAPER 2		52
The role of <i>sapA</i> and <i>yfgA</i> in susceptibility to antibody-mediated complement-dependent killing and virulence of <i>Salmonella enterica</i> Typhimurium		
CHAPTER 4: PAPER 3		76
Rapid transcriptional response to serum exposure correlates with antibody sensitivity of invasive <i>Salmonella</i> Typhimurium ST313 isolates		
CHAPTER 5: OVERALL DISCUSSION, CONCLUSIONS, OUTLOOK		107
5.1.	Increased complement resistance can occur independently of overall virulence in <i>S. Typhimurium</i>	108
5.2.	Genotypic variation is likely not associated with complement resistance among <i>S. Typhimurium</i> ST313 strains	110
5.3.	Identification of bacterial factors that enable <i>S. Typhimurium</i> strains to survive complement-mediated killing acting via antibody	112
5.4.	Conclusions	119
5.5.	Research Questions for Further Study and Future Directions	120
