Summary	VIII
Abbreviations	XII
1. Background	1
1.1. <i>Acute febrile illnesses at peripheral health care level: decreasing prevalence of bacterial infections, increasing antibiotic use</i>	1
1.2. <i>IMCI and ALMANACH are available disease management algorithms- why is the development of a novel algorithm required?</i>	3
1.3. <i>Opportunities for improvement of existing algorithms</i>	7
2. Goals and Objectives	9
2.1. <i>Goal</i>	9
2.2. <i>Objectives</i>	9
3. Methodological overview	10
3.1. <i>Phase 1: development of a novel decision tree</i>	10
3.2. <i>Phase 2: evaluation of e-POCT in a randomized, controlled trial</i>	12
4. Study setting: Dar es Salaam, Tanzania	14
4.1. <i>Child health in Tanzania</i>	15
4.2. <i>Causes of fever and antibiotic prescription</i>	18
5. Improving case management and rational antibiotic use for acute febrile illnesses among children in resource-poor settings: development of e-POCT, an electronic algorithm that integrates host biomarker point-of care tests.	21
5.1. <i>Abstract</i>	22
5.2. <i>Introduction</i>	23
5.3. <i>Methods</i>	24
5.4. <i>Results</i>	28
5.5. <i>Discussion</i>	48
<i>Acknowledgements</i>	50
6. Validation of prediction rules for serious bacterial infections in Tanzanian febrile children	51
6.1. <i>Abstract</i>	53
6.2. <i>Introduction</i>	54
6.3. <i>Patients and Methods</i>	55
6.4. <i>Results</i>	58
6.5. <i>Discussion</i>	69
6.6. <i>Conclusions</i>	71
7. A novel electronic algorithm using host biomarker point-of-care-tests for the management of febrile illnesses in Tanzanian children (e-POCT): a randomized, controlled, non-inferiority trial	72
7.1. <i>Abstract</i>	73
7.2. <i>Introduction</i>	74
7.3. <i>Methods</i>	76

Table of Contents	IV
7.4. <i>Results</i>	81
7.5. <i>Discussion</i>	90
7.6. <i>Conclusion</i>	93
8. Efficacy and safety of using point-of-care C-reactive protein testing to reduce inappropriate antibiotic prescription for respiratory infections in febrile children: an individually randomized, controlled non-inferiority trial in the Tanzanian outpatient setting.	95
8.1. <i>Summary</i>	96
8.2. <i>Research in context</i>	97
8.3. <i>Introduction</i>	98
8.4. <i>Methods</i>	99
8.5. <i>Results</i>	104
8.6. <i>Discussion</i>	110
9. Complementary findings from the e-POCT project	115
9.1. <i>Use of point-of-care tests</i>	115
9.2. <i>Severe malnutrition in the e-POCT and ALMANACH arms</i>	125
9.3. <i>Skin disease diagnostic tools within the e-POCT algorithm</i>	128
9.4. <i>Retrospective validation of e-POCT on IMALDIA dataset</i>	129
10. General Discussion and Conclusions	131
10.1. <i>Adequacy of the project's methodology: how should an innovative disease management algorithm be developed and evaluated?</i>	133
10.2. <i>Host biomarkers</i>	137
10.3. <i>e-POCT algorithm: opportunities for improvement and further research</i>	140
10.4. <i>Antibiotic prescription practice</i>	143
10.5. <i>Visions for electronic algorithms in the health-system</i>	145
10.6. <i>Implementation of e-POCT: opportunities and barriers</i>	147
10.7. <i>Conclusions</i>	152
11. Recommendations	154
11.1. <i>Electronic algorithms for child health</i>	154
11.2. <i>Point-of care tests</i>	157
12. References	159
13. Appendices	184
14. Curriculum Vitae	188
