

TABLE OF CONTENTS

Chapter 1. General introduction	1
<i>Development of optical fibers</i>	1
<i>From transmission to emission</i>	3
1.1. Motivation of the work	6
References.....	8
Chapter 2. Overview on the properties of RE-doped fibers	11
2.1. Chapter overview	11
2.2. Fiber parameters	12
2.2.1. Numerical aperture (NA)	12
2.2.2. V-number.....	13
2.2.3. Optical losses.....	13
2.3. Fiber types.....	14
2.3.1. LMA fiber	14
2.3.2. Double cladding fiber	15
2.4. RE laser materials.....	16
2.4.1. The free RE ion.....	17
2.4.2. RE ion in ligand field	18
2.4.3. Ion-phonon interaction.....	21
2.4.4. Ion-Ion interaction.....	22
References.....	25
Chapter 3. Properties of Yb doped silica fibers with different Al and P co-dopants concentration produced by the sol-gel based granulated silica method	27
<i>Chapter overview</i>	27
3.1. Introduction.....	28
3.2. Fiber production by the sol-gel granulated silica method.....	29
3.2.1. Method description.....	29
3.2.2. Fabrication of Yb-doped, Al and P co-doped silica fibers by the sol-gel granulated silica method.....	30
3.3. Measurements and results.....	31
3.3.1. Refractive index profiles.....	31

3.3.2. Upper level excited state lifetime	32
3.3.3. Laser characteristics	32
3.4. Discussion and conclusion	34
References.....	35

Chapter 4. Fabrication and characteristics of Yb-doped silica fibers produced by the sol-gel based granulated silica method	37
<i>Chapter overview</i>	37
4.1. Introduction.....	38
4.2. Fiber production method.....	40
4.2.1. Method description.....	41
4.2.2. Fabrication of Yb-doped, Al and P co-doped silica fibers by the sol-gel granulated silica method.....	42
4.3. Measurements and results.....	43
4.3.1. Structural and imaging analysis.....	43
4.3.2. Refractive index profiles.....	45
4.3.3. Transmission losses.....	46
4.3.4. Fluorescence lifetime.....	47
4.3.5. Laser properties	48
4.4. Discussion	50
4.5. Conclusion and outlook.....	51
References.....	51
Chapter 5. Spectral analysis of Yb, Al and P co-doped silica glasses	55
<i>Chapter overview</i>	55
5.1. Introduction.....	56
5.2. Sample preparation	58
5.3. Measurements and results.....	59
5.3.1. Yb ²⁺ UV-VIS absorption and emission profiles.....	59
5.3.1.1. Influence of Al/P concentration on the formation of Yb ²⁺	61
5.3.1.2. Influence of Al/Yb concentration on the formation of Yb ²⁺	61
5.3.2. NIR-excited visible emission (cooperative luminescence)	62
5.3.2.1. Influence of Al/P concentration ratio on the cooperative luminescence.....	62

5.3.2.2. Influence of Al/Yb concentration ratio on the cooperative luminescence.....	64
5.3.3. Yb ³⁺ NIR absorption and emission profiles.....	64
5.3.3.1. Influence of Al/P concentration ratio on the NIR radiative transitions	65
5.3.3.2. Influence of Al/Yb concentration ratio on the NIR radiative transitions	68
5.3.4. Yb ³⁺ NIR fluorescence lifetimes.....	68
5.3.5. Influence of material purity on the various spectral properties of Yb-Al-P silica glasses.....	70
5.4. Discussion and conclusion	71
References.....	72
Chapter 6. General conclusion	77
Appendices	78
A. Two-dimensional refractive index profiling of optical fibers by modified refractive near-field technique	79
B. Progress in the fabrication of optical fibers by the sol-gel-based granulated silica method	87
C. Advances in optical fibers fabricated with granulated silica	96
D. Atomic-scale imaging of dopant atoms and clusters in Yb-doped optical fibers	99
E. Spectroscopy of a heated Yb-doped optical fiber with high aluminum content	106
List of figures	113
List of tables	121
Acknowledgement	123
