Abstract	1
Acknowledgment	3
Chapter 1: Introduction	11
1.1 Introduction	12
Chapter 2: Overview of Organic Photovoltaic Cells.....	17
2.1 Wider context: global energy	18
2.2 Next generation photovoltaics: introduction to organic solar cell technology	19
2.2.1 What characterizes an organic semiconductor? From single molecule to a band-like structure	20
2.2.2 On the way to high efficiency	23
2.2.3 Factors governing the power conversion efficiency (PCE).....	25
2.2.3.1 V_{oc} losses.....	28
2.3 OPV materials	29
2.3.1 Donor component.....	29
2.3.1.1 Polymers and copolymers.....	29
2.3.1.2 Small molecules.....	30
2.3.2 Acceptor component	31
2.3.2.1 Fullerenes.....	31
2.3.2.2 Non-Fullerene Acceptors (NFAs).....	32
2.4 Photon-to-current generation in donor:acceptor systems: probing the ultrafast steps	34
2.4.1 Exciton formation via photoexcitation.....	34
2.4.1.1 Exciton loss prior to dissociation at the D/A interface	36
2.4.2 Exciton diffusion to the D/A interface	37
2.4.3 Charge formation and separation	40
2.4.3.1 Charge-transfer rate and interfacial electronic coupling: Marcus Theory and its applicability in OPV systems.....	44
2.4.4 Nanoscale charge mobility	47
2.4.5 Recombination of separate charges in BHJ blends: geminate and non-geminate phenomena	49
2.5 References	52
Chapter 3: Experimental Part	63
3.1 Fundamentals of time-resolved spectroscopy	64
3.1.1 Principles.....	64
3.1.2 Laser source.....	65

3.1.3	Nonlinear optical effects: wavelength tuning (pump beam) and broad band white light generation (probe beam).....	67
3.2	Transient absorption spectroscopy.....	70
3.2.1	Principle	70
3.2.2	Experimental setup.....	74
3.2.3	Data treatment	77
3.2.3.1	Chirp correction via cross-correlation by the optical Kerr effect	78
3.2.3.2	Multi-exponential Global Analysis.....	79
3.2.3.2.1	An example of TA data set studied via global analysis.....	80
3.2.3.3	Spectral decomposition of the TA data	82
3.2.3.3.1	An example of TA data set studied via TA decomposition.....	82
3.3	Electroabsorption (EA) and electromodulated differential absorption (EDA) spectroscopy based on the Stark effect.....	84
3.3.1	Steady-state electroabsorption (EA).....	85
3.3.1.1	An example of EA signature in TA data	88
3.3.2	Electromodulated Differential Absorption (EDA).....	89
3.3.2.1	Experimental setup	90
3.3.2.2	Data treatment.....	92
3.3.2.2.1	Device capacitance and photocurrent	92
3.3.2.2.2	From EDA dynamics to voltage drops and normalized voltage drops	93
3.3.2.2.3	Derivation of the electron-hole separation distance.....	93
3.3.2.2.4	Test device preparation	95
3.4	Sample and device preparation	96
3.5	References	98

Chapter 4: Femtosecond study of photoexcited C₆₀ films: from its excited states dynamics to the role of C₆₀ aggregates and from C₆₀ blended with TAPC to free charges in neat C₆₀ devices with applied electric field..... 99

4.1	Introduction	100
4.2	Results and Discussion.....	104
4.2.1	Steady-state spectra of the investigated samples.....	104
4.2.2	EQE and steady-state EA spectra of the neat C ₆₀ device	105
4.2.3	Photoinduced processes in neat C ₆₀ film: CT and Frenkel excitons	107
4.2.4	The effect of C ₆₀ aggregates on the excited-states dynamics: comparison between neat C ₆₀ film with NBPhen:C ₆₀ blend and PCBM.....	110
4.2.5	The influence of the initially photoexcited species on the charge generation processes in TAPC:C ₆₀ blends	113
4.2.6	Field-assisted dissociation of Frenkel and CT excitons in neat C ₆₀ devices: properties of the free charges and the importance of the C ₆₀ anion band	117
4.3	Conclusion.....	120
4.4	Experimental Methods	121
4.4.1	Samples preparation	121
4.4.2	Steady-state spectroscopy	122
4.4.3	Femtosecond transient absorption spectroscopy and data analysis.....	122

4.4.4	Electroabsorption (EA) spectroscopy.....	123
4.4.5	Biased pump-probe spectroscopy.....	123
4.4.6	EQE measurements	124
4.4.7	Photoluminescence (PL) measurements.....	124
4.5	Appendix - Supporting Figures	125
4.6	References	129

Chapter 5: Effect of microstructure and electronic coupling on charge generation and recombination in blends of pBTTT with different fullerene derivatives..... 133

5.1	Introduction	134
5.2	Results and Discussion.....	138
5.2.1	Morphological characterization of the pBTTT:fullerene 1:1 blends.....	138
5.2.2	Charge generation and recombination in pBTTT:fullerene 1:1 blends.....	142
5.2.2.1	Ordered intermixed blends	142
5.2.2.2	Phase-separated blend and partially intermixed disordered blend	145
5.2.3	Temporal evolution of the spectral components	147
5.2.3.1	Evolution of the excitons and charges in pBTTT:bisPCBM and pBTTT:ICBA.....	148
5.2.3.2	Temporal evolution of the EA and charges in ordered intermixed blends	150
5.2.4	Charge generation and recombination in pBTTT:fullerene 1:4 blends.....	153
5.2.4.1	Investigation of the charge separation via electron transfer (ET).....	154
5.2.4.2	Investigation of the charge separation via hole transfer (HT)	156
5.3	Conclusion.....	159
5.4	Experimental Methods	161
5.4.1	Film preparation	161
5.4.2	Stationary absorption spectroscopy.....	161
5.4.3	Photothermal deflection spectroscopy (PDS)	162
5.4.4	Photoluminescence quantum yield measurements.....	162
5.4.5	X-ray experiments (GIWAXS and GISAXS)	162
5.4.6	IR spectroscopy	163
5.4.7	Transient Absorption Spectroscopy	163
5.5	Appendix - Supporting Figures	164
5.6	References	171

Chapter 6: Does the introduction of a second fullerene derivative enhance free charge generation in pBTTT-based ternary blends?..... 173

6.1	Introduction	174
6.2	Results and Discussion.....	178
6.2.1	Chemical composition and phase morphologies.....	178
6.2.2	Charge separation via the energy cascade mechanism.....	181
6.2.3	Steady-state spectra of the investigated blends	182

6.2.4	Comparison of the charge generation and recombination processes between ternary blends and binary counterparts	185
6.2.4.1	pBTTT:fullerene-1:bisPCBM 1:1:1 ternary blends	185
6.2.4.2	pBTTT:fullerene-1:bisPCBM 1:1:3 ternary blends	190
6.2.4.3	Ternary blends containing both PCBM and ketolactam	195
6.3	Conclusion	201
6.4	Experimental Methods	203
6.4.1	Films preparation	203
6.4.2	Stationary absorption spectroscopy	203
6.4.3	Transient Absorption Spectroscopy	204
6.5	Appendix - Supporting Figures	205
6.6	References	211

Chapter 7: Stark effect transport studies in pBTTT:PCBM blends showing one-, two- and three-phase microstructures 213

7.1	Introduction	214
7.2	Results and Discussion	216
7.2.1	Phase morphologies, steady-state absorption and electroabsorption spectra for the investigated pBTTT:PCBM blends	216
7.2.2	TA spectroscopy: charge generation process in blends with additives in comparison with the 1:1 and 1:4 films	218
7.2.2.1	Evolution of the EA signal in the TA spectra	222
7.2.3	Electromodulated differential absorption (EDA) spectroscopy: investigation of the free charge transport dynamics in pBTTT:PCBM blends with different phase morphologies	225
7.2.3.1	Conversion of the EDA signal to the voltage drop ($\Delta V(t)$) and to the normalized voltage drop ($\Delta V(t)/\Delta V_{tot}$) across the devices	225
7.2.3.2	Effect of applied bias on free charge generation	229
7.2.3.3	Average electro-hole separation distance	232
7.3	Conclusion	236
7.4	Experimental Methods	238
7.4.1	Samples preparation	238
7.4.2	Stationary absorption spectroscopy	238
7.4.3	Transient Absorption and EDA Spectroscopy	238
7.5	Appendix - Supporting Figures	240
7.6	References	243

Chapter 8: Charge generation and driving force dependence of electron and hole transfer in polymer:non-fullerene systems 247

8.1	Introduction	248
8.2	Results and Discussion	251

8.2.1	Investigated J61:m-ITIC systems	251
8.2.2	Photophysics of neat J61 film and of m-ITIC film and in solution	253
8.2.3	Charge generation in the J61:m-ITIC (1:1) BHJ blend: unbalanced ET and HT rates	256
8.2.4	HT process in J61:m-ITIC heterojunctions with different sample configurations	260
8.2.5	Driving force dependence on the HT rates when m-ITIC is mixed with different polymers	264

8.3	Conclusion	270
-----	------------------	-----

8.4	Experimental Methods	271
8.4.1	Sample preparation and characterization	271
8.4.2	Calculation of the excitation profile in the bilayer	271
8.4.3	Sensitive EQE PV measurements	272
8.4.4	EL measurements	272
8.4.5	Analysis of the sEQE/EL spectra	272
8.4.6	Transient Absorption (TA) Spectroscopy	273
8.4.7	Analysis of the TA data	274

8.5	Appendix - Supporting Figures	276
-----	-------------------------------------	-----

8.6	References	283
-----	------------------	-----

Chapter 9: General Conclusions and Outlook 285

9.1	General conclusions and outlook	286
-----	---------------------------------------	-----
