Acknowledgments	v
Abstract	vii
Kurzfassung	ix
Abbreviations	xiii
1 Introduction	1
1.1 Power Transformer Development	1
1.2 Power Transformer Limitations	3
1.3 Power Electronics Development	7
1.4 MV/MF Transformer Applications	10
1.5 MV DC-DC Converters	11
1.6 MV/MF Transformer Technologies	14
1.7 Aims and Contributions	18
1.7.1 Scientific Contributions	18
1.7.2 DC-DC Demonstrator System	21
1.7.3 Performance Benchmark	25
1.8 List of Publications	27
1.8.1 Journal Papers	28
1.8.2 Conference Papers	28
1.8.3 Workshops and Seminars	29
1.8.4 Further Scientific Contributions	30
1.9 Thesis Outline	31
2 MF Transformer Scaling Laws	33
2.1 Introduction	33
2.2 Full-Analytical Modeling	36
2.2.1 Geometry and Operating Conditions	36
2.2.2 Core and Winding Losses	40
2.2.3 Thermal Modeling	42
2.3 Optimization and Scaling Laws	42
2.3.1 Area Product	42
2.3.2 Optimal MF Design	43
2.3.3 Frequency Diversity	45
2.3.4 Scaling Laws	47
2.4 Analytical Results	52

2.4.1	Considered Parameters	53
2.4.2	Optimal Design	53
2.4.3	Frequency Diversity	55
2.4.4	Scaling Laws	55
2.4.5	Core Material and Winding Stranding	58
2.5	Numerical Verification	59
2.5.1	Semi-Numerical Model	59
2.5.2	Scaling Laws	60
2.5.3	Design Space Diversity	64
2.6	Critical Analysis	67
2.7	Summary	68
3	MF Transformer Equivalent Circuit	71
3.1	Introduction	71
3.2	Considered Transformer	74
3.3	Analytical Methods	77
3.3.1	Open-Circuit	77
3.3.2	Short-Circuit	78
3.3.3	Circuit Extraction	80
3.4	FEM Simulations	80
3.4.1	Circuit Extraction	80
3.4.2	2D Modeling	80
3.4.3	3D Modeling	82
3.5	Statistical Analysis	82
3.5.1	Considered Parameters	82
3.5.2	Worst-Case Analysis	84
3.5.3	Normal Distribution Analysis	87
3.6	Results	88
3.6.1	Measurements	88
3.6.2	Computations	91
3.6.3	Comparison: Measurements and Computations	92
3.7	Summary	97
4	Litz Wire Losses	99
4.1	Introduction	99
4.2	Perfect Twisting	102
4.3	Twisting Imperfections	105
4.3.1	Computation Method	105
4.3.2	Considered Twisting Imperfections	109
4.3.3	Simulation: Twisting Schemes	110

4.3.4	Simulation: Number of Pitches	112
4.3.5	Analytical Approximations	113
4.4	Measurements of Twisting Imperfections	116
4.5	Summary	120
5	MV/MF Transformer Prototype	123
5.1	Introduction	123
5.2	Optimization	125
5.2.1	Design Space Restrictions	125
5.2.2	Optimization Results	126
5.2.3	Design Selection	129
5.3	Design and Construction	131
5.3.1	Transformer Design	131
5.3.2	Insulation Capabilities	137
5.3.3	Construction and Vacuum Potting	139
5.4	Experimental Testing	145
5.4.1	Short-Circuit and Saturation	145
5.4.2	Impedance Measurements	146
5.4.3	Resonances	147
5.4.4	Insulation Testing	152
5.4.5	Thermal Model	153
5.5	Losses Measurements	155
5.5.1	Winding Losses	156
5.5.2	Core Losses	157
5.5.3	Other Losses	161
5.5.4	Efficiency	162
5.6	Summary	165
6	MV/MF Transformer Shielding	167
6.1	Introduction	167
6.2	MV/MF Transformer	168
6.3	Magnetic and Electric Field Analysis	171
6.4	Electrical Shielding	176
6.4.1	Shielding Methods	176
6.4.2	Resistive Shielding	177
6.4.3	Shield Functional Principle	179
6.4.4	Optimal Shield Conductivity	182
6.4.5	Shielding Effects	184
6.4.6	Experimental Verification	187
6.5	Summary	188

7	Dielectric Losses with PWM	191
7.1	Introduction	191
7.2	Dielectric Polarization Losses	193
7.2.1	Time Domain	193
7.2.2	Frequency Domain	197
7.2.3	Loss Computation	199
7.3	Dielectric Losses with PWM Voltages	201
7.3.1	PWM with Frequency-Independent Materials	201
7.3.2	Frequency-Dependent Materials	205
7.3.3	Upper Bound on the Dielectric Losses	206
7.3.4	PWM with Frequency-Dependent Materials	208
7.4	Case Study: MV/MF Transformer	210
7.4.1	Transformer Design	210
7.4.2	Transformer Simulation	213
7.4.3	Epoxy Resin Insulation	213
7.4.4	Silicone Elastomer Insulation	215
7.4.5	Dielectric Loss Measurements	218
7.5	Design Guidelines	221
7.6	Summary	224
8	MV DC-DC Converter Prototype	227
8.1	Introduction	227
8.2	Considered SRC-DCX	229
8.3	Passive Rectifier	232
8.3.1	Operating Principle	232
8.3.2	Simulated Waveforms	236
8.3.3	Partial-Load Operation	238
8.4	Active Rectifier / Analytical Model	240
8.4.1	Considered Model	241
8.4.2	Resonant Current	241
8.4.3	Circulating Current	243
8.4.4	Magnetizing Current	244
8.4.5	Choice of the Equivalent Circuit	244
8.4.6	Current Waveforms	245
8.4.7	ZVS Currents	245
8.5	Active Rectifier / Simulations	247
8.5.1	Phase Shift Operation	249
8.5.2	Robustness of the Modulation Scheme	251
8.5.3	Partial-Load Operation	253

8.6	Measurements	254
8.6.1	Modulation Scheme	254
8.6.2	Efficiency Measurements	256
8.7	Summary	258
9	Conclusion and Outlook	261
9.1	MV/MF Transformer Technologies	262
9.2	DC-DC Demonstrator System	264
9.3	Outlook and Future Research Areas	265
	Appendices	269
A	Equivalent Circuit Comparison	271
A.1	Transformer Equivalent Circuits	271
A.2	Analytical Computations	274
A.3	FEM Simulations	275
A.4	Designs with High Coupling Factors	275
B	Approximations of Dielectric Losses	279
B.1	Frequency-Independent Materials	279
B.2	Upper Bound on the Dielectric Losses	280
B.3	Frequency-Dependent Materials	281
B.4	Kramers-Kronig Approximations	282
B.5	Accuracies of the Approximations	283
	Bibliography	285
	Curriculum Vitae	319
