Abstract	ix
Sommario	xi
Introduction	1
<b>1 Schrödinger quantum mechanics</b>	<b>7</b>
1.1 Separation of the center of mass coordinates . . . . .	9
1.2 Spatial rotations and the $SO(3)$ group . . . . .	11
1.3 Symmetries in non-relativistic quantum mechanics . . . . .	14
1.4 Quantum numbers and state labeling . . . . .	24
<b>2 Bound states</b>	<b>25</b>
2.1 Spin functions . . . . .	25
2.2 LS coupling . . . . .	27
2.3 Expectation values and integral matrix elements . . . . .	28
2.4 The stochastic variational method . . . . .	29
<b>3 Basis functions</b>	<b>37</b>
3.1 Plain explicitly correlated Gaussians (pECGs) . . . . .	38
3.2 Partial wave expansion . . . . .	39
3.3 General vector representation (GVR) . . . . .	40
3.4 Floating explicitly correlated Gaussians (FECGs) . . . . .	41
3.5 Polynomial floating explicitly correlated Gaussians (po1-FECGs) . . . . .	42
3.6 Complex explicitly correlated Gaussians (CECGs) . . . . .	42
3.7 Complex explicitly correlated Gaussians with $N = 1$ (zCECGs) . . . . .	43
3.8 Numerical stability of complex functions . . . . .	44
<b>4 Rigorous elimination of global translation</b>	<b>47</b>
4.1 Required relations . . . . .	49
4.2 pECG: generalized constraints . . . . .	52

4.3	FECG: generalized constraints	53
4.4	ECG-GVR: generalized constraints	54
4.5	Multiple-channel optimization	56
4.6	Numerical results	57
4.7	General observation	58
<b>5</b>	<b>Projection techniques</b>	<b>63</b>
5.1	The $O(3)$ irreducible representations	64
5.2	Numerical projection by quadrature	65
5.3	Rovibronic states calculations	67
5.4	On the analytic solution of the projector	72
<b>6</b>	<b>Analytically projected ECG with one-axis shifted centers</b>	<b>79</b>
6.1	Integral matrix elements	80
6.2	Numerical results	92
<b>7</b>	<b>From probability to structure</b>	<b>95</b>
7.1	Pair correlation functions	96
7.2	Angular correlation functions	98
7.3	Structural motifs	98
7.4	Complex explicitly correlated Gaussians	102
<b>8</b>	<b>Dirac quantum mechanics</b>	<b>113</b>
8.1	Dirac Hamiltonian	115
8.2	Two-fermion Dirac-Coulomb Hamiltonian	116
8.3	Many-fermion Dirac-Coulomb Hamiltonian	118
8.4	Correct representation of the kinetic energy operator	119
8.5	Kinetic balance condition and non-relativistic limit	120
<b>9</b>	<b>Fine structure of fermionic binaries</b>	<b>123</b>
9.1	Analytic derivation of Hamiltonian matrix elements	126
9.2	Overlap and relativistic kinetic energy integral	130
9.3	Potential energy integral	130
9.4	Elimination of center-of-mass translational energy	132
9.5	Numerical results	134
<b>Conclusions</b>		<b>139</b>
<b>A</b>	<b>Known analytic solutions for standard integrals</b>	<b>143</b>
A.1	FECG functions	143

<b>B</b>	<b>New analytic solutions for standard integrals</b>	<b>149</b>
B.1	Angular momentum expectation values for FECG functions	149
B.2	Coulomb integral for ECG-GVR functions	158
B.3	Angular momentum expectation values for ECG-GVR functions	170
B.4	po1-FECG functions	176
<b>C</b>	<b>Pair correlation functions</b>	<b>187</b>
C.1	FECG functions	187
C.2	Numerically projected FECGs	197
C.3	Analytically projected zFECGs	199
C.4	ECG-GVR functions	201
C.5	po1-FECG functions	207
<b>D</b>	<b>Löwdin projector onto <math>SO(3)</math> irreducible representations</b>	<b>209</b>
<b>Bibliography</b>		<b>211</b>
<b>Publications</b>		<b>229</b>
<b>Acknowledgments</b>		<b>231</b>
