Abstract	iii
Zusammenfassung	v
1 Introduction	1
1.1 General background on hydrological forecasting	1
1.2 Historic background of atmospheric predictions	3
1.3 Predictability of the atmosphere	5
1.4 Subseasonal hydrometeorological ensemble predictions	7
1.5 From forecast performance to forecast value	10
1.6 Objectives and Outline	12
2 Skill of Subseasonal Forecasts in Europe: Effect of Bias Correction and Downscaling Using Surface Observations	15
2.1 Introduction	18
2.2 Data	20
2.3 Methods	21
2.4 Results	25
2.5 Discussion and Conclusion	36
3 Subseasonal hydrometeorological ensemble predictions in small and medium-size mountainous catchments: Benefits of the NWP approach	41
3.1 Introduction	44
3.2 Methods	46
3.3 Data	48
3.4 Results	51
3.5 Discussion	60
3.6 Conclusion and outlook	60
3.7 Supplementary Information	66
4 Skill of Hydrological Extended Range Forecasts for Water Resources Management in Switzerland	77
4.1 Introduction	80
4.2 Case Study and Data	81
4.3 Error Correction	84
4.4 Verification	85
4.5 Results	86
4.6 Discussion	92
4.7 Conclusions	94

5	Subseasonal streamflow predictions for optimized hydropower operations: Part 1	97
5.1	Introduction	100
5.2	Data	100
5.3	Methods.....	103
5.4	Results and Discussion.....	108
5.5	Conclusion and Outlook.....	112
6	Subseasonal streamflow predictions for optimized hydropower operations: Part 2	115
6.1	Introduction	118
6.2	Data	118
6.3	Methods.....	119
6.4	Results and Discussion.....	119
7	Conclusions and outlook	121
7.1	Meteorological perspective	121
7.2	Hydrological perspective	122
7.3	Application perspective.....	124
7.4	General conclusions and outlook	125
	Bibliography	127
	Acknowledgements.....	145
	Curriculum Vitae	146
